Mathematical Reasoning And Heuristics:

Mathematical Reasoning and Heuristics Carlo Cellucci, Donald Gillies, 2005 This volume is a collection of papers on philosophy of mathematics which deal with a series of questions quite different from those which occupied the minds of the proponents of the three classic schools logicism formalism and intuitionism The questions of the volume are not to do with justification in the traditional sense but with a variety of other topics Some are concerned with discovery and the growth of mathematics How does the semantics of mathematics change as the subject develops What heuristics are involved in mathematical discovery and do such heuristics constitute a logic of mathematical discovery What new problems have been introduced by the development of mathematics since the 1930s Other questions are concerned with the applications of mathematics both to physics and to the new field of computer science Then there is the new question of whether the axiomatic method is really so essential to mathematics as is often supposed and the question which goes back to Wittgenstein of the sense in which mathematical proofs are compelling Taking these questions together they give part of an emerging agenda which is likely to carry philosophy of mathematics forward into the twenty first century The Philosophy of Mathematical Practice Paolo Mancosu, 2008-06-19 There is an urgent need in philosophy of mathematics for new approaches which pay closer attention to mathematical practice This book will blaze the trail it offers philosophical analyses of important characteristics of contemporary mathematics and of many aspects of mathematical activity which escape purely formal logical treatment Effective Mathematics Lessons Through An Eclectic Singapore Approach: Yearbook 2015, Association Of Mathematics Educators Khoon Yoong Wong, 2015-05-21 With this seventh volume as part of the series of yearbooks by the Association of Mathematics Educators in Singapore we aim to provide a range of learning experiences and teaching strategies that mathematics teachers can judiciously select and adapt in order to deliver effective lessons to their students at the primary to secondary level Our ultimate goal is to develop successful problem solvers who are able to understand concepts master fundamental skills reason logically apply mathematics enjoy learning and strategise their thinking These qualities will prepare students for life long learning and careers in the 21st century The materials covered are derived from psychological theories education praxis research findings and mathematics discourse mediated by the author s professional experiences in mathematics education in four countries over the past four decades They are organised into ten chapters aligned with the Singapore mathematics curriculum framework to help teachers and educators from Singapore and other countries deepen their understanding about the so called Singapore Maths The book strikes a balance between mathematical rigour and pedagogical diversity without rigid adherence to either This is relevant to the current discussion about the relative roles of mathematics content knowledge and pedagogical content knowledge in effective teaching It also encourages teachers to develop their own philosophy and teaching styles so that their lessons are effective efficient and enjoyable to teach **The Mathematics Enthusiast** Bharath Sriraman, 2015-10-01 The Mathematics Enthusiast TME is an eclectic

internationally circulated peer reviewed journal which focuses on mathematics content mathematics education research innovation interdisciplinary issues and pedagogy The journal exists as an independent entity It is published on a print on demand basis by Information Age Publishing and the electronic version is hosted by the Department of Mathematical Sciences University of Montana The journal is not affiliated to nor subsidized by any professional organizations but supports PMENA Psychology of Mathematics Education North America through special issues on various research topics

From a Heuristic Point of View Cesare Cozzo, Emiliano Ippoliti, 2014-07-03 How do we get new knowledge Following the maverick tradition in the philosophy of science Carlo Cellucci gradually came to the conclusion that logic can only fulfill its role in mathematics science and philosophy if it helps us to answer this question He argues that mathematical logic is inadequate and that we need a new logic framed in a naturalistic conception of knowledge and philosophy the heuristic conception This path from logic to a naturalistic conception of knowledge and philosophy explains the title From a Heuristic Point of View which recalls the celebrated collection of essays From a Logical Point of View by Willard Van Orman Quine the father of modern naturalized epistemology The word heuristic points to Cellucci's favorite theme and the main difference between him and Quine the emphasis on discovery and building a logic for generating new knowledge This book is a collection of essays from leading figures in this field who discuss criticize or expand on the main topics in Cellucci's work dealing with some of the most challenging questions in logic science and philosophy

Common Sense, Reasoning, and Rationality Renee Elio, 2002-02-07 As the eleventh volume in the New Directions in Cognitive Science series formerly the Vancouver Studies in Cognitive Science series this work promises superb scholarship and interdisciplinary appeal It addresses three areas of current and varied interest common sense reasoning and rationality While common sense and rationality often have been viewed as two distinct features in a unified cognitive map this volume offers novel even paradoxical views of the relationship Comprised of outstanding essays from distinguished philosophers it considers what constitutes human rationality behavior and intelligence covering diverse areas of philosophy psychology cognitive science and computer science Indeed it is at the forefront of cognitive research and promises to be of unprecedented influence across numerous disciplines

Studying Virtual Math Teams Gerry Stahl, 2010-05-03 Studying Virtual Math Teams centers on detailed empirical studies of how students in small online groups make sense of math issues and how they solve problems by making meaning together These studies are woven together with materials that describe the online environment and pedagogical orientation as well as reflections on the theoretical implications of the findings in the studies The nature of group cognition and shared meaning making in collaborative learning is a foundational research issue in CSCL More generally the theme of sense making is a central topic in information science While many authors allude to these topics few have provided this kind of detailed analysis of the mechanisms of intersubjective meaning making This book presents a coherent research agenda that has been pursued by the author and his research group The book opens with descriptions of the project and its methodology as well as

situating this research in the past and present context of the CSCL research field The core research team then presents five concrete analyses of group interactions in different phases of the Virtual Math Teams research project These chapters are followed by several studies by international collaborators discussing the group discourse the software affordances and alternative representations of the interaction all using data from the VMT project The concluding chapters address implications for the theory of group cognition and for the methodology of the learning sciences In addition to substantial introductory and concluding chapters this important new book includes analyses based upon the author s previous research thereby providing smooth continuity and an engaging flow that follows the progression of the research The VMT project has dual goals a to provide a source of experience and data for practical and theoretical explorations of group knowledge building and b to develop an effective online environment and educational service for collaborative learning of mathematics Studying Virtual Math Teams reflects these twin orientations reviewing the intertwined aims and development of a rigorous science of small group cognition and a Web 2 0 educational math service It documents the kinds of interactional methods that small groups use to explore math issues and provides a glimpse into the potential of online interaction to promote productive math discourse

Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity
