Mathematical Explorations With Matlab:

Mathematical Explorations with MATLAB Ke Chen, Peter J. Giblin, A. Irving, 1999-04-15 This book is about the kind of mathematics usually encountered in first year university courses. A key feature of the book is that this mathematics is explored in depth using the popular and powerful package Matlab. The emphasis is on understanding and investigating the mathematics and putting it into practice in a wide variety of modelling situations. In the process the reader will gain some fluency with Matlab, no starting knowledge of the package being assumed. **Differential Equations with MATLAB** Mark McKibben, Micah D. Webster, 2014-09-08 A unique textbook for an undergraduate course on mathematical modeling. Differential Equations with MATLAB: Exploration, Applications and Theory provides students with an understanding of the practical and theoretical aspects of mathematical models involving ordinary and partial differential equations (ODEs and PDEs). The text presents a unifying picture inherent to the study and analysis of more than 20 distinct models spanning disciplines such as physics, engineering and finance. The first part of the book presents systems of linear ODEs. The text develops mathematical models from ten disparate fields including pharmacokinetics, chemistry, classical mechanics, neural networks, physiology and electrical circuits. Focusing on linear PDEs, the second part covers PDEs that arise in the mathematical modeling of phenomena in ten other areas including heat conduction, wave propagation, fluid flow through fissured rocks, pattern formation and financial mathematics. The authors engage students by posing questions of all types throughout, including verifying details, proving conjectures of actual results, analyzing broad strokes that occur within the development of the theory and applying the theory to specific models. The authors' accessible style encourages students to actively work through the material and answer these questions. In addition, the extensive use of MATLAB GUIs allows students to discover patterns and make conjectures. **Modeling of Curves and Surfaces with MATLAB®** Vladimir Rovenski, 2010-07-03 This text on geometry is devoted to various central geometrical topics including graphs of functions, transformations, non-Euclidean geometries, curves and surfaces as well as their applications in a variety of disciplines. This book presents elementary methods for analytical modeling and demonstrates the potential for symbolic computational tools to support the development of analytical solutions. The author systematically examines several powerful tools of MATLAB, including 2D and 3D animation of geometric images with shadows and colors and transformations using matrices. With over 150 stimulating exercises and problems, this text integrates traditional differential and non-Euclidean geometries with more current computer systems in a practical and user-friendly format. This text is an excellent classroom resource or self-study reference for undergraduate students in a variety of disciplines. **Explorations of Mathematical Models in Biology with MATLAB** Mazen Shahin, 2013-12-24 Explore and analyze the solutions of mathematical models from diverse disciplines. As biology increasingly depends on data, algorithms and models, it has become necessary to use a computing language such as the user-friendly MATLAB to focus more on building and analyzing models as opposed to configuring tedious calculations.

Explorations of Mathematical Models in Biology with MATLAB provides an introduction to model creation using MATLAB followed by the translation analysis interpretation and observation of the models With an integrated and interdisciplinary approach that embeds mathematical modeling into biological applications the book illustrates numerous applications of mathematical techniques within biology ecology and environmental sciences Featuring a quantitative computational and mathematical approach the book includes Examples of real world applications such as population dynamics genetics drug administration interacting species and the spread of contagious diseases to showcase the relevancy and wide applicability of abstract mathematical techniques Discussion of various mathematical concepts such as Markov chains matrix algebra eigenvalues eigenvectors first order linear difference equations and nonlinear first order difference equations Coverage of difference equations to model a wide range of real life discrete time situations in diverse areas as well as discussions on matrices to model linear problems Solutions to selected exercises and additional MATLAB codes Explorations of Mathematical Models in Biology with MATLAB is an ideal textbook for upper undergraduate courses in mathematical models in biology theoretical ecology bioeconomics forensic science applied mathematics and environmental science The book is also an excellent reference for biologists ecologists mathematicians biomathematicians and environmental and resource economists
