Learning and Teaching Real World Problem Solving in School

Mathematics Murad Jurdak, 2016-05-30 The ultimate aim of this book is to identify the conceptual tools and the instructional modalities which enable students and teachers to cross the boundary between school mathematics and real world problem solving. The book identifies, examines, and integrates seven conceptual tools of which five are constructs: activity theory, narrative modeling, critical mathematics education, ethnomathematics, and two are contexts: STEM and the workplace. The author develops two closely linked multiple perspective frameworks: one for learning real world problem solving in school mathematics which sets the foundations of learning real world problem solving in school mathematics, and one for teaching real world problem solving in school mathematics which explores the modalities of teaching real world problem solving in school mathematics. The book is composed as on the one hand a high level theoretical scholarly work on real world problem solving in school mathematics and on the other hand a set of twelve narratives which put together constitute a thought provoking and moving personal and professional autobiography. Mogens Niss. These narratives combine aspects of Murad's personal trajectory as an individual with those points in his professional career at which he became aware of perspectives on and approaches to mathematics education that were both significant in and of themselves and instrumental for the specific scholarly endeavor presented in the book. Mogens Niss.

The Contribution of Mathematics to School STEM Education Judy

Anderson, Katie Makar, 2024-06-10 This book presents contemporary STEM education research conducted by mathematics education researchers and their collaborators which highlights the important and pivotal role of mathematics in school STEM education. It showcases evidence of the types of integrated curriculum approaches to STEM education which highlight mathematics as a key component and where mathematical concepts can be learnt through integrated tasks. These examples challenge the idea that mathematics is just an application or servant to the other STEM subjects and highlight the contribution that mathematics can make to the understanding and practices of the other STEM subjects. This book fills a void in the current research literature on the role of mathematics in STEM education, provides evidence of the possibilities for designing integrated STEM curriculum, and highlights current understandings of the role of mathematics in school STEM education. For researchers, it identifies and elaborates gaps to encourage further exploration in this field.
