1.1 Place Value, Rounding, and Arithmetic

1 Place Value

The Arabic system uses ten symbols called digits to write numbers. The ten digits are 0, 1, 2, 3, 4, 5, 6, 7, 8, and 9. The Arabic system is a decimal system based on multiples of 10.

When expressing a number that is greater than 9, use a combination of the ten digits. The number ten uses the two digits 1 and 0 to show that there are 0 units (ones) and 1 ten.

Notice that the Arabic system uses place value to indicate that the value of the digit depends on its place in the number. When a digit is moved one place to the left, its value increases ten times. However, when a digit is moved one place to the right, its value decreases by a power of ten. Numbers that include values less than 1 use a decimal point, the dot that separates the part of the number that is larger than 1 from the part of the number that is less than 1.

Digit	Hundreds	Tens	Ones (units)	Tenths	Hundredths
3	300	30	3	$\frac{3}{10}$	$\frac{3}{100}$
7	700	70	7	$\frac{7}{10}$	$\frac{7}{100}$

A comma is included after three consecutive places starting at the ones place and moving left. The number 743,128,326.8531 has two commas. A comma is never used to the right of the decimal point.

2 CH. 1. Numbers and Arithmetic

Chapter Overview

This chapter begins with the foundational branch of mathematics: arithmetic. Its goal is to build upon the student's previous knowledge of various number types and arithmetic operations. The first section includes addition, subtraction, multiplication, and division skills that will be used throughout the text. Following sections apply these arithmetic skills to fractions, decimals, exponents, and order of operations. The chapter closes with an introduction to ratios.

Lesson 1

Students may not be as familiar with using a zero to indicate rounding precision as they are with place value, arithmetic, and rounding in general. You may want to use Table A to illustrate the precision of a number rounded to the tenths and thousandths place.
