Abstract: In the study, it was aimed to develop a valid and reliable scale in order to determine the self-efficacy perceptions of classroom teachers in the field of mathematics learning difficulties. In the development process of the scale, the basic resources and the scale development studies in the literature were examined. First, a pool of substances was created. Content validity was ensured by taking the opinions of 21 expert participants in the 24 question areas determined in the item pool. Content validity index was used in content validity. In this analysis, two questions were removed from the scale. Preliminary application was made with 44 participating teachers who are experts in their fields and exploratory factor analysis was started. For exploratory factor analysis, 359 people consisting of classroom teachers in Sakarya province were studied. In the explanatory factor analysis, 5 items were removed from the scale by looking at the factor load. The factor loadings for the 17 items in the scale vary between 0.508 and 0.976. Among the comparative fit indices obtained as a result of confirmatory factor analysis, RMSEA=0.067 and Cmin/DF=1.568 were calculated. The Cronbach alpha reliability coefficient of the measurements is 0.970. The data obtained were analyzed with statistical methods using SPSS 25, AMOS 24 and Microsoft Excel programs. The validity and reliability criteria of the scale developed within the scope of the study were met.

1. Introduction

Individuals may differ for various reasons and in terms of their characteristics. These differences can be seen in one or more features (Özyürek, 2006). If individuals differ significantly from their peers in terms of their characteristics and competencies and need special education, they are called individuals who require special education (Official Gazette, 2018). One of the groups in the classification of individuals requiring special education is learning difficulties. Samuel Kirk was the first person to use the term learning disability in 1962. In 1975, learning disability was accepted as a special education category for the first time (Bender, 2014). The first studies on special learning disabilities started with the research conducted by two doctors at the same time towards the end of the 1800s (Arabacı, 2018). When the research is examined, it is seen that the studies are mostly focused on neurological, psychological and educational areas.

Learning Disability is classified as reading disorder (dyslexia), written expression disorder (dysgraphia), and mathematics learning disability (dyscalculia) (Balci, 2015; Smith, 2004; Lerner, 1989).

Students who have difficulty learning mathematics in Turkey continue their education as full-time inclusive students in general education classes within the scope of special education. In addition, these students also benefit from supportive education classroom services for mathematics lessons (Girli, 2015). It is known that classroom teachers work in these institutions. The teacher is the person who interacts with the student, designs and implements the program, uses tools, measures and evaluates. Teachers have a very important function in determining, creating and evaluating their behaviors for the student (Gözütok, 1991; Deniz and Hakan, 2021). Teachers can create academic advances in the student with their work (Exley, 2003).
