

I use Maths daily in my professional role.

Maths helps me to understand and learn from research papers, to keep accurate dental records for my clients and to help diagnose and monitor the progression of oral recovery from dental disease. As I am partly self-employed, I also use Maths to manage and monitor my financial accounts and to organise and achieve my time. Maths was not my strongest subject in school but understanding where Maths fits in dentistry has been invaluable in supporting the development of the career I love.

Tracy Doyle - General Hygienist BELFAST

As a Quantity Surveyor working on a Construction Project, I am responsible for monitoring and checking the project costs.

The role involves ensuring the procurement of materials and subcontractors are managed within the project budget. Maths is very important in the role of a Quantity Surveyor as nearly all aspects of the job involve numbers. Whether this be measuring to check quantities of materials needed (using area formulae learned at school) or working out money due for payment to subcontractors, Maths plays a role.

Gregory Patten - Quantity Surveyor Gilbert Ash & Co BELFAST

I use Maths throughout every day and I would not have the business or career I have today without it.

I plan and manage at Property Gut, a company finding investment property for clients, understanding how to apply Maths is really important in the workplace. You don't need to be the best at Maths but you definitely need to appreciate how important it will be when you leave school. Maths was my foundation to becoming a civil engineer. You have a great opportunity to get yourself up for life if you make Maths a part of your life now.

Elaine Courtney - Company Director at Property Gut LONDON

I use Maths every day to develop a plan and roadmap for different products.

As a senior product manager at Northcote I am responsible for deciding which software product features should be built next, helping teams to build these features, and reporting on how they are doing next after being released. Some of the mathematical topics I use most frequently are probability, statistics and data analysis. It helps me to keep track of my workload, ensuring customers are always satisfied with our products.

It's not just the mathematical methods that I learnt at school and university, it's the problem-solving and logical thinking that help me to do my job. Maths is at the centre of so many things in our world today. From Maths for recommendations to self-driving cars, it's a fun time to be a mathematician!

Rebecca Watson - People Analytics Senior Manager at Adlonia NI BELFAST

Most young people will go through over 10 different career paths in their lifetime, including jobs that haven't even been designed yet!

In my role now, I support high universities or leave around 16th and 18th learning, understanding how to choose numbers and how to get prepared to different questions is a key skill set all need in our careers. I can use the way my Maths teachers taught me improving my Maths skills is a crucial way to ensure you are ready for solving new challenges and can recognise the path you want in life.

Maths at Work Pack a Of 6 Tracey Steffora,2013-03-14 **Adults, Mathematics and Work** John J. Keogh,Theresa Maguire,John O'Donoghue,2019-01-21 Adults use mathematics extensively in work even though they may deny it or dismiss their numerate behaviour as common sense Their capacity for mathematics is invisible to them and confirms their non maths person self perception which has negative consequences for their life choices In Adults Mathematics and Work the authors tackle and explain a number of paradoxes related to the curious relationship between adults and mathematics It operationalises the benefits of workplace doctoral research by providing a set of the tools to review this mistaken self perception in order to make workers abilities available for development It also provides a systematic way of uncovering and recognising informal and non formal learning to support employability and re employability in an increasingly fluid work landscape The Teaching Of Mathematics Kulbir Singh Sidhu,1967 Mathematical Subjects Fiona Walls,2009-08-10 Teaching and learning mathematics is a political act in which children teachers parents and policy makers are made visible as subjects As they learn about mathematics children are also learning about themselves who they are who they might become We can choose to listen or not to what children have to say about learning mathematics Such choices constitute us in relations of power Mathematical know how is widely regarded as essential not only to the life chances of individuals but also to the health of communities and the economic well being of nations With the globalisation of education in an increasingly market oriented world mathematics has received intensified attention in the first decade of the twenty first century with a shifting emphasis on utilitarian aspects of mathematics This is reflected in the reconceptualisation of mathematical competence as mathematical literacy loosely conceived as those ways of thinking reasoning and working mathematically that allow us to engage effectively in everyday situations in many occupations and the cut and thrust of world economies as active empowered and participatory citizens It is no surprise then that mathematics has become one of the most politically charged subjects in primary school curricula worldwide We are experiencing an unprecedented proliferation of regional and national strategies to establish benchmarks raise standards enhance achievement close gaps and leave no child behind in mathematics education Industries have sprung up around the design administration and monitoring of standardised assessment to measure and compare children s mathematical achievement against identified benchmarks and each other

Improving Mathematics at Work Celia Hoyles,Richard Noss,Phillip Kent,Arthur Bakker,2010-04-30 This book argues that there has been a radical shift in the nature of mathematical skills required for work which has still not been fully recognised by either the formal education system or by employers and managers **Mathematical Work in Educational Context** Alain Kuzniak,Elizabeth Montoya-Delgadillo,Philippe R. Richard,2022-03-31 This book is a friendly and complete introduction to one of the most comprehensive contemporary theories of mathematics teaching and learning By focusing on mathematical work performed by students and teachers during mathematics session the theory of Mathematical Workings Spaces MWS has

opened up new perspectives and avenues on mathematics education and mathematical thinking. In particular, it enables the identification of students' knowledge production processes and helps teachers to shape them. The first part of the book explores the heart of the theory and aims to further describe and understand epistemological and cognitive aspects of mathematical work. The second part develops the different MWS dedicated to observing how this work depends on the expectations of educational systems, how it is formed and taught, and how individuals appropriate it. In the last part, some applications and perspectives are discussed regarding topics of major importance today in mathematics education, which relate to technological and digital tools, teacher training, and modeling activities. In line with the spirit of the theory, the book was written to reflect the conceptual unity at the heart of the theory of MWS and at the same time to show the freedom and diversity of approaches given space therein. Written for researchers and professionals in mathematics education, it offers plenty of concrete examples from different educational systems around the world to illustrate the theoretical concepts and show the applicability of the theory to practice and research.

Interactive Maths Teaching in the Primary School Nick Pratt, 2006-10-12 Nick Pratt's book looks in detail at the real meaning of teaching mathematics interactively in primary schools. Each section is set clearly within a context, is linked by key ideas, the important bits to think about, and is summarised to give a succinct close to the chapter's content and thinking. It is a book that the reader will definitely find useful and thought provoking. It certainly made me consider how small changes and a wider variety of approaches in the classroom can make big changes in children's learning and understanding of mathematical concepts. Mike Eatwell, Primary Maths Advisor, Bristol LEA. Using a whole class interactive approach to teaching mathematics is a key feature of the National Numeracy Strategy (NNS), and this book looks at not only what works but also why things work. Teachers will be able to understand why and how the various teaching strategies they are using in their classrooms have a positive effect on children's learning. The book covers how to engage in meaningful reflective practice that will improve your lessons, how to use whiteboards making mathematical meaning through talk, getting the whole class interacting, thinking, talking, and acting mathematically, teaching number starting points, teaching shape and space starting points, developing your interactive teaching, a glossary of terms. It is aimed at both practising and trainee teachers and offers clear subject guidance as well as an explanation of a key part of the NNS. It supports both individuals and mathematics subject leaders delivering INSET to their colleagues.
