Park, 2023-02-07 Brain Connectivity in Autism Rajesh K. Kana, Lucina Q. Uddin, Tal Kenet, Diane Chugani, Ralph-Axel Müller, 2014-09-23 The brain's ability to process information crucially relies on connectivity Understanding how the brain processes complex information and how such abilities are disrupted in individuals with neuropsychological disorders will

require an improved understanding of brain connectivity Autism is an intriguingly complex neurodevelopmental disorder with multidimensional symptoms and cognitive characteristics A biological origin for autism spectrum disorders ASD had been proposed even in the earliest published accounts Kanner 1943 Asperger 1944 Despite decades of research a focal neurobiological marker for autism has been elusive Nevertheless disruptions in interregional and functional and anatomical connectivity have been a hallmark of neural functioning in ASD Theoretical accounts of connectivity perceive ASD as a cognitive and neurobiological disorder associated with altered functioning of integrative circuitry Neuroimaging studies have reported disruptions in functional connectivity synchronization of activated brain areas during cognitive tasks and during task free resting states While these insights are valuable they do not address the time lagged causality and directionality of such correlations Despite the general promise of the connectivity account of ASD inconsistencies and methodological differences among studies call for more thorough investigations A comprehensive neurological account of ASD should incorporate functional effective and anatomical connectivity measures and test the diagnostic utility of such measures In addition questions pertaining to how cognitive and behavioral intervention can target connection abnormalities in ASD should be addressed This research topic of the Frontiers in Human Neuroscience addresses Brain Connectivity in Autism primarily from cognitive neuroscience and neuroimaging perspectives

Functional Eye Diseases: Visual Deficits and Rehabilitation Jiawei Zhou,Krista Rose Kelly,Zhikuan Yang,Minbin Yu,Benjamin Thompson,2022-03-08 **The Integration of Clinical Veterinary Anatomy and Diagnostic Imaging** Sokol Duro,Tomasz Szara ,Ozan Gündemir,2025-06-02 The study and application of anatomical structures play a crucial role in various procedures such as orthopaedic intervention nerve blocks pain management and diagnostics A comprehensive understanding of these anatomical intricacies is vital for accurate treatment administration and ensuring patient safety Concurrently diagnostic imaging anatomy employing techniques such as radiography ultrasound CT scans and MRI is pivotal in diagnosing and treating a wide range of medical conditions in animals These techniques offer non invasive visualization of internal structures guide treatment decisions and facilitate monitoring of disease progression and treatment efficacy However there is a growing need for better integration of clinical and imaging anatomy to develop tailored treatment plans advance veterinary medicine and innovate diagnostic imaging techniques The primary objective of this Research Topic is to publish original research work reviews case reports or short communications that provide an update on the most recent advances in the integration of clinical veterinary anatomy and diagnostic imaging This integration not only supports research and innovation in veterinary medicine but also contributes to advancements in disease modeling treatment modalities and longitudinal disease monitoring By combining clinical and imaging anatomy veterinarians and scientists can gain a deeper understanding of disease pathophysiology assess treatment efficacy and improve patient outcomes To gather further insights into the integration of clinical veterinary anatomy and diagnostic imaging we welcome articles addressing but not limited to the following themes The role of clinical

anatomy in accurate nerve block and effective surgical intervention paths The power of veterinary imaging techniques as essential tools for diagnosing and treating various medical conditions in animals The role of advanced imaging techniques such as CT and MRI in 3D modeling in veterinary medicine The importance of morphometric measurements through imaging techniques in veterinary orthopaedic surgery This Research Topic aims to provide the latest information on these themes and will be of interest to researchers and clinicians working in the area of veterinary clinical practice and veterinary diagnostic imaging

Intracranial Pressure & Neuromonitoring XVI Thomas Heldt, 2018-02-28 This book introduces the latest advances relating to the pathophysiology biophysics monitoring and treatment of traumatic brain injury hydrocephalus and stroke presented at the 16th International Conference on Intracranial Pressure and Neuromonitoring the ICP Conference held in Cambridge Massachusetts in June 2016 in conjunction with the 6th Annual Meeting of the Cerebral Autoregulation Research Network Additionally the conference held special sessions on neurocritical care informatics and cerebrovascular autoregulation The peer reviewed papers included were written by leading experts in neurosurgery neurointensive care anesthesiology physiology clinical engineering clinical informatics and mathematics who have made important contributions in this translational area of research and their focus ranges from the latest research findings and developments to clinical trials and experimental studies The book continues the proud tradition of publishing key work from the ICP Conferences and is a must read for anyone wishing to stay abreast of recent advances in the field

Challenging the Functional Connectivity Disruption in Neurodegenerative Diseases: New Therapeutic Perspectives through Non-Invasive Neuromodulation and Cutting-Edge Technologies Giancarlo Zito, Takashi Hanakawa, Luca Berdondini, Lorenzo Masia, Lorenzo Natale, 2018-10-05 The neurorehabilitation field is increasingly focused on understanding how to efficiently revert the effects that acute i.e stroke or traumatic brain injury or chronic i.e neurodegenerative diseases insults play either on small or large scale networks encompassing motor sensory and cognitive domains The link between the disrupted neuronal pulse generators and their effectors is being re shaped through a wide scenario that embraces biorobotics robot aided rehabilitation non invasive neurostimulation nanoprosthetics and neuroengineering For the past decade and at an amazing speed large investments and efforts allowed enthusiastic and only apparently heterogeneous researchers to borrow theories from neurophysiology pharmacology physics and quantum mechanics in order to generate together highly sophisticated tools that restore resemble or even substitute the basic biological architecture The idea of actually reverting weakened functions and or replacing the faulty parts either of the human body or the central and peripheral nervous system is becoming a new reality opening a fascinating era in this field In this Research Topic several researchers showed how the above principles became reality from theory to the bedside of patients providing full explanations of the whole mechanistic processes and how they were implemented up to the final stage
