Moving Pictures Anne Hollander, 1989 Hollander explores the premise that paintings prints and movies move us similarly by virtue of their narrative element which evokes our memories and feelings She argues that we respond to the depiction of glimpses of human life to the realization that we cannot see everything at once and how the rendering of light and spatial composition translates them and keeps them moving into our awareness Thus there is a continuum from the paintings and graphic arts of 15th century northern Europe to the proto cinematic arts of the present ISBN 0 394 57400 1 29 95

Ranciere and Law Monica Lopez Lerma, Julen Etxabe, 2017-11-06 This book is the first to approach Jacques Ranci re s work from a legal perspective A former student of Louis Althusser Ranci re is one of the most important contemporary French philosophers of recent decades offering an original and path breaking way to think politics democracy and aesthetics Ranci re s work has received wide and increasing critical attention but no study exists so far that reflects on the wider implications of Ranci re for law and for socio legal studies Although Ranci re does not pay much specific attention to law and there is a strong temptation to identify law with what he terms the police order much of Ranci re s historical work highlights the creative potential of law and legal language with important legal implications and ramifications So rather than excavate the Ranci rean corpus for

isolated statements about the law this volume reverses such a method and asks what would a Ranci re inspired legal theory look like Bringing together specialists and scholars in different areas of law critical theory and philosophy this rethinking of law and socio legal studies through Ranci re provides an original and important engagement with a range of contemporary legal topics including constituent power and democracy legal subjectivity human rights practices of adjudication refugees the nomos of modernity and the sensory configurations of law It will then be of considerable interest to those working in these areas

Emerging Landscapes Davide Deriu, Krystallia Kamvasinou, 2016-05-06 Emerging Landscapes brings together scholars and practitioners working in a wide range of disciplines within the fields of the built environment and visual arts to explore landscape as an idea an image and a material practice in an increasingly globalized world Drawing on the synergies between the fields of architecture and photography this collection takes a multidisciplinary approach combining practice based research with scholarly essays It explores and critically reassesses the interface between representation the imaginary and symbolic shaping of the human environment and production the physical and material changes wrought on the land At a time of environmental crisis and the end of nature shifting geopolitical boundaries and economic downturn Emerging Landscapes reflects on the state of landscape and its future mapping those practices that creatively address the boundaries between possibility opportunity and action in imagining and shaping landscape **The Moving Eye** Edward Dimendberg, 2019-05-09 Once the province of film and media scholars today the moving image is of broad concern to historians of art and architecture and designers of everything from websites to cities As museums and

galleries devote increasing space to video installations which no longer presuppose a fixed viewer urban space becomes envisioned and planned through fly throughs and technologies such as GPS add data to the experience of travel moving images have captured the attention of geographers and scholars across the humanities and social sciences Their practice of mobility studies is remaking how we understand a contemporary world in relentless motion Media theorist and historian Anne Friedberg 1952 2009 was among the first practitioners of visual studies to theorize the experience of vision in motion Her books have become key points of reference in the discussion of the windows that frame images and the viewers in motion who perceive them Although widely influential beyond her own discipline Friedberg s work has never been the subject of an extended study *The Moving Eye* Film Television Architecture Visual Art and the Modern gathers together essays by renowned thinkers in media studies art history architecture and museum studies to consider the rich implications of her work for understanding film and video new media visual art architecture exhibition design urban space and virtual reality Ranging from early cinema to works by Le Corbusier Sergei Eisenstein Gordon Matta Clark and Pierre Huyghe to theories of the image in motion informed by psychoanalysis theories of the public sphere and animal studies each of the nine essays in the book advances the lines of inquiry commenced by Friedberg *Understanding Origins* Francisco J. Varela, J.P. Dupuy, 2013-03-09 The main intention of this book is to bring together contributions from biology cognitive science and the humanities for a joint exploration of some of the main contemporary notions dealing with the understanding of origins in life mind and society The question of origin is inseparable from a web of hypotheses that both shape and explain us Although origin invites examination it always seems to elude our grasp Notions have always been produced to interpret the genesis of life mind and the social order and these notions have all remained unstable in the face of theoretical and empirical challenges In any given period the central ideas on origin have had a mutual resonance frequently overlooked by specialists engaged in their own particular fields As a consequence this book should be of interest to a wide audience In particular for all those engaged in the social sciences and the philosophy of science it is a unique document since bridges to the natural sciences in a mutually illuminating way are hard to find Whether as a primary source or as inspirational reading we feel this book has a place in every library The material comes from an international meeting held in September 13 16 1987 at Stanford University organized by F Varela and J P Dupuy at the request of the Program of Interdisciplinary Research of Stanford University We are grateful to Rene Girard the Program Director for making it possible with the help of the Mellon Foundation
