Points On Quantum Projectivizations:

Points on Quantum Projectivizations, **Points on Quantum Projectivizations** Adam Nyman, 2003-12-17 The use of geometric invariants has recently played an important role in the solution of classification problems in non commutative ring theory We construct geometric invariants of non commutative projectivizations a significant class of examples in non commutative algebraic geometry More precisely if S is an affine noetherian scheme X is a separated noetherian S scheme $\mathcal{E}$ is a coherent $\mathcal{O}_X$ bimodule and $\mathcal{I} \subset \mathcal{E}$ is a graded ideal then we develop a compatibility theory on adjoint squares in order to construct the functor Γ_n of flat families of truncated $\mathcal{E}$ $\mathcal{I}$ point modules of length $n+1$ For $n \geq 1$ we represent Γ_n as a closed subscheme of $\mathbb{P}^n \times X$ $\mathcal{E}$ $\mathcal{I}$ $\otimes n$ The representing scheme is defined in terms of both $\mathcal{I}_n$ and the bimodule Segre embedding which we construct Truncating a truncated family of point modules of length $i+1$ by taking its first i components defines a morphism $\Gamma_i \rightarrow \Gamma_{i+1}$ which makes the set Γ_n an inverse system In order for the point modules of $\mathcal{E}$ $\mathcal{I}$ to be parameterizable by a scheme this system must be eventually constant In 20 we give sufficient conditions for this system to be constant and show that these conditions are satisfied when $\text{Proj } T(\mathcal{E}/\mathcal{I})$ is a quantum ruled surface In this case we show the point modules over $T(\mathcal{E}/\mathcal{I})$ are parameterized by the closed points of $\mathbb{P}^n \times X$ $\mathcal{E}$ The Geometry of Points on Quantum Projectivizations Adam Nyman, 2001

On Dynamical Poisson Groupoids I Luen-Chau Li, Serge Parmentier, 2005 We address the question of duality for the dynamical Poisson groupoids of Etingof and Varchenko over a contractible base We also give an explicit description for the coboundary case associated with the solutions of CDYBE on simple Lie algebras as classified by the same authors *The Role of the Spectrum in the Cyclic Behavior of Composition Operators* Eva A. Gallardo-Gutiérrez, Alfonso Montes-Rodríguez, 2004 Introduction and preliminaries Linear fractional maps with an interior fixed point Non elliptic automorphisms The parabolic non automorphism Supercyclic linear fractional composition operators Endnotes Bibliography

The $RO(G)$ -Graded Equivariant Ordinary Homology of G -Cell Complexes with Even-Dimensional Cells for $G = \mathbb{Z}/p$, *Maximum Principles on Riemannian Manifolds and Applications* Stefano Pigola, Marco Rigoli, Alberto Giulio Setti, 2005 Aims to introduce the reader to various forms of the maximum principle starting from its classical formulation up to generalizations of the Omori Yau maximum principle at infinity obtained by the authors Local Zeta Functions Attached to the Minimal Spherical Series for a Class of Symmetric Spaces Nicole Bopp, Hubert Rubenthaler, 2005 Intends to prove a functional equation for a local zeta function attached to the minimal spherical series for a class of real reductive symmetric spaces *An Analogue of a Reductive Algebraic Monoid Whose Unit Group Is a Kac-Moody Group* Claus Mokler, 2005 By an easy generalization of the Tannaka Krein reconstruction we associate to the category of admissible representations of the category $\mathcal{O}$ of a Kac Moody algebra and its category of admissible

duals a monoid with a coordinate ring The Kac Moody group is the Zariski open dense unit group of this monoid The restriction of the coordinate ring to the Kac Moody group is the algebra of strongly regular functions introduced by V Kac and D Peterson This monoid has similar structural properties as a reductive algebraic monoid In particular it is unit regular its idempotents related to the faces of the Tits cone It has Bruhat and Birkhoff decompositions The Kac Moody algebra is isomorphic to the Lie algebra of this monoid

Hilbert Modular Forms: mod $\mathbb{F}_p$ and $\mathbb{F}_p$ -Adic Aspects Fabrizio Andreatta, Eyal Zvi Goren, 2005 We study Hilbert modular forms in characteristic p and over p adic rings In the characteristic p theory we describe the kernel and image of the q expansion map and prove the existence of filtration for Hilbert modular forms we define operators U V and Θ_χ and study the variation of the filtration under these operators Our methods are geometric comparing holomorphic Hilbert modular forms with rational functions on a moduli scheme with level p structure whose poles are supported on the non ordinary locus In the p adic theory we study congruences between Hilbert modular forms This applies to the study of congruences between special values of zeta functions of totally real fields It also allows us to define p adic Hilbert modular forms a la Serre as p adic uniform limit of classical modular forms and compare them with p adic modular forms a la Katz that are regular functions on a certain formal moduli scheme We show that the two notions agree for cusp forms and for a suitable class of weights containing all the classical ones We extend the operators V and Θ_χ to the p adic setting
