Principles Of Mental Imagery Bradfords:

Principles of Mental Imagery Ronald A. Finke, 1989 Principles Of Mental Imagery offers a broad balanced and up to date introduction to the major findings of this research and identifies five general principles that can account for most of them It considers the development of experimental techniques that have solved many of the challenging methodological problems inherent in imagery research and includes recent experimental findings not covered in other imagery books Case Studies in the Neuropsychology of Vision Glyn W. Humphreys, 2013-04-15 One important means to understanding normal cognitive functions is the study of the breakdown of these functions following brain damage This book provides reviews of major case studies dealing with the breakdown of visual perception and recognition including the disorders of motion vision colour vision perceptual integration perceptual classification recognition of particular categories of object semantic access from vision in optic aphasia and recognition impairments with relative sparing of imagery The cases are discussed in the light of studies that have followed since and the chapters provide a context in which the contributions of the case studies can be evaluated

Physics of the Human Temporality Ihor Lubashevsky, Natalie Plavinska, 2021-10-21 This book presents a novel account of the human temporal dimension called the human temporality and develops a special mathematical formalism for describing such an object as the human mind One of the characteristic features of the human mind is its temporal extent For objects of physical reality only the present exists which may be conceived as a point like moment in time In the human temporality the past retained in the memory the imaginary future and the present coexist and are closely intertwined and impact one another This book focuses on one of the fragments of the human temporality called the complex present A detailed analysis of the classical and modern concepts has enabled the authors to put forward the idea of the multi component structure of the present For the concept of the complex present the authors proposed a novel account that involves a qualitative description and a special mathematical formalism This formalism takes into account human goal oriented behavior and uncertainty in human perception The present book can be interesting for theoreticians physicists dealing with modeling systems where the human factor plays a crucial role philosophers who are interested in applying philosophical concepts to constructing mathematical models and psychologists whose research is related to modeling mental processes **Journal of Mental Imagery** ,1993 **Discourse, Vision, and Cognition** Jana Holňánová, 2008 While there

is a growing body of psycholinguistic experimental research on mappings between language and vision on a word and sentence level there are almost no studies on how speakers perceive conceptualise and spontaneously describe a complex visual scene on higher levels of discourse This book explores the relationship between language eye movements and cognition and brings together discourse analysis with cognitively oriented behavioral research Based on the analysis of data drawn from spoken descriptive discourse spontaneous conversation and experimental investigations this work offers a comprehensive picture of the dynamic natures of language vision and mental imagery Verbal and visual data synchronised

and correlated by means of a multimodal scoring method are used as two windows to the mind to show how language and vision in concert can elucidate covert mental processes National Library of Medicine Current Catalog National Library of Medicine (U.S.),1993 **Mental Imagery** R.G. Kunzendorf,2013-06-29 The current book presents select proceedings from the Eleventh Annual Conference of AASMI The American Association for the Study of Mental Imagery in Washington DC 1989 and from the Twelfth Annual Conference of AASMI in Lowell and Boston MA 1990 This presentation of keynote addresses research papers and clinical workshops reflects a broad range of theoretical positions and a diverse repertoire of methodological approaches Within this breadth and diversity however four aspects of the nature of imagery stand out its mental nature its private nature its conscious nature and its symbolic nature The mental nature of imagery i e its epistemological aspect is explored in the book s first section of articles by Marcia Johnson Laura Snodgrass Leonard Giambra and Alicia Grodsky Vija Lusebrink Selina Kassels Helane Rosenberg and Yakov Epstein M Elizabeth D Zamko and Lynne Schwab and Laurence Martel These first eight articles fall essentially into various domains of cognitive psychology including the psychology of art and educational psychology In the second section the private nature of imagery is studied by Ernest Hartmann Nicholas Spanos Benjamin Wallace Deirdre Barrett John Connolly James Honeycutt Dominique Gendrin and James Honeycutt and J Michael Gotcher These studies which fall within the realm of personality and social psychology bring to light the fact that many very public interpersonal behaviors reflect very private images Such behaviors range from interpersonal rapport with a hypnotist to rapport with a forensic jury **Current Catalog** National Library of Medicine (U.S.),1993 First multi year cumulation covers six years 1965 70 **Recreative Minds** Gregory Currie,Ian Ravenscroft,2002 Annotation Recreative Minds develops a philosophical theory of imagination that draws upon recent theories and results in psychology Ideas about how we read the minds of others have put the concept of imagination firmly back on the agenda for philosophy and psychology Currie and Ravenscroft present a theory of what they call imaginative projection they show how it fits into a philosophically motivated picture of the mind and of mental states and how it illuminates and is illuminated by recent developments in cognitive psychology They argue that we need to recognize a category of desire in imagination and that supposition and fantasy should be classed as forms of imagination They accommodate some of the peculiarities of perceptual forms of imagining such as visual and motor imagery and suggest that they are important for mind reading They argue for a novel view about the relations between imagination and pretence and suggest that imagining can be but need not be the cause of pretending They show how the theory accommodates but goes beyond the idea of mental simulation and argue that the contrast between simulation and theory is neither exclusive nor exhaustive They argue that we can understand certain developmental and psychiatric disorders as arising from faulty imagination Throughout they link their discussion to the uses of imagination in our encounters with art and they conclude with a chapter on responses to tragedy The final chapter also offers a theory of the emotions that suggests that these states have much in common with perceptual states Currie and

Ravenscroft offer a lucid exploration of a fascinating subject for readers in philosophy psychology and aesthetics The Wiley Handbook on the Theories, Assessment and Treatment of Sexual Offending Douglas P. Boer,2016-11-14 The Wiley Handbook on the Theories Assessment and Treatment of Sexual Offending is a three volume collection of up to date readings contributed by international experts relating to the assessment intervention and theoretical foundations of sexual offending Includes in depth and up to date assessment and treatment approaches for adult male female juvenile and cognitively impaired offenders Features contributions by leading experts in each specialized field from around the world including Bill Marshall Bill Lindsay and Tony Ward Offers cutting edge theories of sexual offending including the latest multifactorial and single factor theories Computational and Psychophysical Mechanisms of Visual Coding Michael Jenkin,Laurence Harris,1997-05-13 All visual tasks from the simplest computer graphics program to the most complex biological visual system require an underlying representation of visual information The structure or coding of this representation provides the framework for processing the information Both the biological and computational communities have had to address the task of designing or inferring visual coding strategies This volume by some of the most active contributors in the field of visual coding describes some of the mechanisms used to code descriptions of visual phenomena in both areas These chapters illustrate the similarities in the problems considered and the common models and algorithms that are proposed to solve them The book includes an overview that sets the later chapters in context Researchers in neuroscience and computational vision will find a wealth of new ideas here The Science of the Mind Robert L. Solso,Dominic W. Massaro,1995 What would happen if someone brought together the finest minds in psychology to reflect on the past century and speculate on the future of the field in the twenty first century Robert Solso and Dominic Massaro did just that and the result is this fascinating insightful and sometimes humorous collection of essays from leading psychologists among them Gordon Bower Howard Gardner Richard Gregory Earl Hunt Stephen Kosslyn Jean Mandler Donald Norman Roger Shepard Roger Sperry and Robert Sternberg American psychology recently reached its centennial and these contributions offer a glimpse of what sorts of developments and innovations we can expect over the next century For anyone with a professional or personal interest in psychology this wide ranging work will provoke thought and discussion about the shape of psychology as we approach the next century The Quarterly Journal of Experimental Psychology ,2002 Journal of Cognitive Neuroscience ,1989

Choice ,1989 Conceptual Representation Helen Moss,James Hampton,James A. Hampton,2003 This special issue on conceptual representation contains invited papers from leading researchers across the range of cognitive science disciplines addressing the nature of semantic and conceptual representation in the mind and brain Foundations of Geometric Cognition Mateusz Hohol,2019-09-12 The cognitive foundations of geometry have puzzled academics for a long time and even today are mostly unknown to many scholars including mathematical cognition researchers Foundations of Geometric Cognition shows that basic geometric skills are deeply hardwired in the visuospatial cognitive capacities of our brains namely

spatial navigation and object recognition These capacities shared with non human animals and appearing in early stages of the human ontogeny cannot however fully explain a uniquely human form of geometric cognition In the book Hohol argues that Euclidean geometry would not be possible without the human capacity to create and use abstract concepts demonstrating how language and diagrams provide cognitive scaffolding for abstract geometric thinking within a context of a Euclidean system of thought Taking an interdisciplinary approach and drawing on research from diverse fields including psychology cognitive science and mathematics this book is a must read for cognitive psychologists and cognitive scientists of mathematics alongside anyone interested in mathematical education or the philosophical and historical aspects of geometry

Konnektionismus in Artificial Intelligence und Kognitionsforschung Georg Dorffner,1990-09-10 Konnektionismus als Methode Modellvorstellung aber auch als Weltbild dringt immer mehr in die Domänen der AI KI und Kognitionsforschung vor Obwohl es eine Reihe von Konferenzen gibt die künstliche neuronale Netzwerke die Basis des Konnektionismus zum Inhalt haben scheint dem Bereich der Intelligenzforschung und modellierung mit Hilfe solcher Netzwerke vergleichsweise noch wenig Raum geboten zu werden Die Konferenz die vom 18 bis 21 September 1990 in Salzburg stattgefunden hat und deren Proceedings in diesem Band vorliegen sollte diese Lücke schließen Sie hat in Form von Vorträgen Workshops und Panels Arbeiten zusammengebracht die sich mit Anwendungen neuronaler Netzwerke auf Probleme der AI mit grundlegenden Aspekten von massivem Parallelismus und Netzwerkverarbeitung in der AI sowie mit theoretischen Implikationen der Modelle auf die AI und die Kognitionsforschung im allgemeinen beschäftigen Die vorliegenden Beiträge geben einen guten Einblick in den Stand der Forschung besonders im deutschsprachigen Raum aber auch darüber hinausgehend

Spectator in the Cartesian Theater Peter Slezak,2023-08-01 The Cartesian Theater is Dennett's famous metaphor for the idea that a homunculus or little man watches the screen on which our thoughts appear However contrary to much academic teaching and scholarship Spectator in the Cartesian Theater Where Theories of Mind Went Wrong since Descartes shows that Descartes was not guilty of this fallacy for which he has been blamed In his physiological writings neglected by philosophers Descartes explained that the pseudo explanation arises not from what is included in our theory of consciousness but rather from what is missing We fail to notice that the theory is incomplete because we are intuitively doing part of the explanatory work That is we are the spectators in the Cartesian Theater With detailed critiques Peter Slezak shows that Searle's Chinese Room Argument Kripke's theory of proper names Davidson's semantics of natural language and Kosslyn's theory of visual imagery rely on what is intuitively meaningful to us rather than what follows from the theory Slezak offers a novel solution to the elusive logic of the Cogito argument showing it to be akin to the Liar Paradox Since Descartes' perplexity is our own this shows how the subjective certainty of consciousness and the mind body problem can arise for a physical system An intelligent computer would think that it isn't one

Unfolding Perceptual Continua Liliana Albertazzi,2002 The book analyses the differences between the mathematical interpretation and the phenomenological intuition of the continuum The basic idea is

that the continuity of the experience of space and time originates in phenomenic movement The problem of consciousness and of the spaces of representation is related to the primary processes of perception Conceived as an interplay between cognitive science linguistics and philosophy the book presents a conceptual framework based on a dynamic and experimental approach to the problem of the continuum Besides presenting the primitives of a theory of cognitive space and time it presents a theory of the observer analyzing the relationship among perspective points of view and unity of consciousness The book s chapters deal with the dynamic elaboration and recognition of forms from the lower to the higher processes in the various perceptual fields Experimental analysis from visual auditory and tactile perception outline the basic structures of intentionality and its counterpart in language and gesture Series B
