Georgeson, Patrick R. Green, 2014-08-27 This comprehensively updated and expanded revision of the successful second edition continues to provide detailed coverage of the ever growing range of research topics in vision In Part I the treatment of visual physiology has been extensively revised with an updated account of retinal processing a new section explaining the principles of spatial and temporal filtering which underlie discussions in later chapters and an up to date account of the primate visual pathway Part II contains four largely new chapters which cover recent psychophysical evidence and computational model of early vision edge detection perceptual grouping depth perception and motion perception The models discussed are extensively integrated with physiological evidence All other chapters in Parts II III and IV have also been thoroughly updated **Seeing and Visualizing** Zenon W. how they move and what they are The first edition of Visual Perception took a refreshingly different approach to perception starting from the function that vision serves for an active observer in a three dimensional environment This fully revised and expanded new edition continues this approach in contrast to the traditional textbook treatment of vision as a catalogue of phenomena Following a general introduction to the main theoretical approaches the authors discuss the historical basis of our current knowledge Placing the study of vision in its historical context they look at how our ideas have been shaped by art optics biology and philosophy as well as psychology Visual optics and the neurophysiology of vision are also described The core of the book covers the perception of location motion and object recognition There is a new chapter on representation and vision including a section on the perception of computer generated images This readable accessible and truly relevant introduction to the world of perception aims to elicit both independent thought and further study It will be welcomed by students of visual perception and those with a general interest in the mysteries of vision

A Taxonomy of Visual Processes William R. Uttal, 2014-06-27 Originally published in 1981 this third volume deals with the empirical data base and the theories concerning visual perception the set of mental responses to photic stimulation of the eyes As the book develops the plan was to present a general taxonomy of visual processes and phenomena It was hoped that such a general perspective would help to bring some order to the extensive but largely unorganized research literature dealing with our immediate perceptual

responses to visual stimuli at the time The specific goal of this work was to provide a classification system that integrates and systematizes the data base of perceptual psychology into a comprehensive intellectual scheme by means of an eclectic multi level metatheory invoking several different kinds of explanation

Deep Learning to See Alessandro Betti,Marco Gori,Stefano Melacci,2022-04-26 The remarkable progress in computer vision over the last few years is by and large attributed to deep learning fueled by the availability of huge sets of labeled data and paired with the explosive growth of the GPU paradigm While subscribing to this view this work criticizes the supposed scientific progress in the field and proposes the investigation of vision within the framework of information based laws of nature This work poses fundamental questions about vision that remain far from understood leading the reader on a journey populated by novel challenges resonating with the foundations of machine learning The central thesis proposed is that for a deeper understanding of visual computational processes it is necessary to look beyond the applications of general

purpose machine learning algorithms and focus instead on appropriate learning theories that take into account the spatiotemporal nature of the visual signal. Serving to inspire and stimulate critical reflection and discussion yet requiring no prior advanced technical knowledge, the text can naturally be paired with classic textbooks on computer vision to better frame the current state of the art, open problems and novel potential solutions. As such, it will be of great benefit to graduate and advanced undergraduate students in computer science, computational neuroscience, physics and other related disciplines.

Reconceptualizing the Digital Humanities in Asia Kaby Wing-Sze Kung, 2020-09-09. This book examines new forms of representation that have changed our perception and interpretation of the humanities in an Asian and digital context. In analyzing written and visual texts such as the use of digital technology and animation in different works of art originating from Asia, the authors demonstrate how literature, history and culture are being redefined in spatialized relations amid the trend of digitization. Research studies on Asian animation are in short supply and so this volume provides new and much needed insights into how art, literature, history and culture can be presented in innovative ways in the Asian digital world. The first section of this volume focuses on the new conceptualization of the digital humanities in art and film studies, looking at the integration of digital technologies in museum narration and cinematic production. The second section of the volume addresses the importance of framing these discussions within the context of gender issues in the digital world, discussing how women are represented in different forms of social media. The third and final section of the book explores the digital world's impacts on people's lives through different forms of digital media, from the electromagnetic unconscious to digital storytelling and digital online games. This book presents a novel contribution to the burgeoning field of the digital humanities by informing new forms of representation and interpretations and demonstrating how digitization can influence and change cultural practices in Asia and globally. It will be of interest to students and scholars interested in digitization from the full spectrum of humanities disciplines, including art, literature, film, music, visual culture, media and animation, gaming and Internet culture. This is a well-written book and I enjoyed reading it. The first impression of the book is that it is very innovative, a down-to-earth academic volume that discusses digital culture. Professor Anthony Fung, Professor, Director, School of Journalism and Communication, The Chinese University of Hong Kong. This book has contributed to the existing field of humanities by informing new forms of representation and interpretations and how digitization may change cultural practices.
