Readings In Machine Learning:

Readings in Machine Learning Jude W. Shavlik, Thomas Glen Dietterich, 1990 The ability to learn is a fundamental characteristic of intelligent behavior Consequently machine learning has been a focus of artificial intelligence since the beginnings of AI in the 1950s The 1980s saw tremendous growth in the field and this growth promises to continue with valuable contributions to science engineering and business Readings in Machine Learning collects the best of the published machine learning literature including papers that address a wide range of learning tasks and that introduce a variety of techniques for giving machines the ability to learn The editors in cooperation with a group of expert referees have chosen important papers that empirically study theoretically analyze or psychologically justify machine learning algorithms The papers are grouped into a dozen categories each of which is introduced by the editors

Braverman Readings in Machine Learning Lev Rozonoer, Boris Grigor'evich Mirkin, Ilya Muchnik, 2018 This state of the art survey is dedicated to the memory of Emmanuil Markovich Braverman 1931 1977 a pioneer in developing the machine learning theory The 12 revised full papers and 4 short papers included in this volume were presented at the conference Braverman Readings in Machine Learning Key Ideas from Inception to Current State held in Boston MA USA in April 2017 commemorating the 40th anniversary of Emmanuil Braverman s decease The papers present an overview of some of Braverman s ideas and approaches The collection is divided in three parts The first part bridges the past and the present Its main contents relate to the concept of kernel function and its application to signal and image analysis as well as clustering The second part presents a set of extensions of Braverman s work to issues of current interest both in theory and applications of machine learning The third part includes short essays by a friend a student and a colleague

Literature Search Strategies for Interdisciplinary Research Linda G. Ackerson, 2007 The amount of published literature can be overwhelming for scientists and researchers moving from a broad disciplinary research area to a more specialized one particularly in fields that use information from more than one discipline Without a focused inquiry the researcher may find too little information or may be overcome by too much Striking the correct balance of information is the focus of Literature Search Strategies for Interdisciplinary Research This useful reference tool studies diverse interdisciplinary areas revealing the general and individual qualities that dictate the strategies of successful searches Beginning with a bare bones search strategy for finding primary research in interdisciplinary areas the book then goes on to provide hints for research in specific disciplines as the unique traits of the individual fields compound the difficulties in interdisciplinary research Individual chapters written by experts in that particular area address ten research fields in depth disclosing the common qualities of interdisciplinary research The study areas covered include Paleontology Crystallography Quaternary Research Human Factors Engineering Nanotechnology Atmospheric Chemistry Bioethics Computational Biology Engineering Entrepreneurship and Machine Learning For scientists and engineers new to their fields as well as librarians whose responsibilities include collecting library materials for newly

emerging interdisciplinary research areas Linda Ackerson's guide provides all that is needed to develop a successful search strategy

Readings in Knowledge Acquisition and Learning Bruce G. Buchanan, David C. Wilkins, 1993 Readings in Knowledge Acquisition and Learning collects the best of the artificial intelligence literature from the fields of machine learning and knowledge acquisition This book brings together the perspectives on constructing knowledge based systems from these two historically separate subfields of artificial intelligence
