Redistribution Reactions:

Redistribution Reactions J.C. Lockhart, 2012-12-02 Redistribution Reactions is a comprehensive coverage of redistribution phenomena for the entire Periodic Table This book is organized into two sections encompassing 10 chapters that tackle the concepts of structural reorganization Part I provides first an overview of redistribution reactions followed by a discussion on a series of techniques capable of detecting all compounds in a redistribution reaction including electronic vibrational and nuclear magnetic spectroscopy X ray crystallography mass spectroscopy polarography chromatography and the use of phase diagram Part II is devoted to the redistribution reactions of the elements under Periodic Group headings with available kinetics or thermodynamics information This part also presents valuable structural information of the group elements such as their vibrational frequencies and chemical shifts This work will be of convenient reference for researchers already working on redistribution and for a more general range of research workers in inorganic chemistry who require information on scrambling for a specific element

P. Hagen, 2009-09-17 For the first time the discipline of modern inorganic chemistry has been systematized according to a plan constructed by a council of editorial advisors and consultants among them three Nobel laureates E O Fischer H Taube and G Wilkinson Rather than producing a collection of unrelated review articles the series creates a framework which reflects the creative potential of this scientific discipline Thus it stimulates future development by identifying areas which are fruitful for further research The work is indexed in a unique way by a structured system which maximizes its usefulness to the reader It augments the organization of the work by providing additional routes of access for specific compounds reactions and other topics *Inorganic Reactions and Methods,*

Reactions On Metallic Films V2 J Anderson, 2012-12-02 Chemisorption and Reactions on Metallic Films Volume 2 is a four chapter text that describes the role of evaporated metal films in advancing the understanding of the metal gas interface chemistry and in understanding of adsorption and catalysis at metal surfaces This volume first describes film structure and properties particularly of random polycrystalline films as well as the concepts of the adsorption and kinetic phenomena The

topic is followed by an overview of the main classes of catalytic reactions that have been studied over evaporated metal film catalysts A chapter explores the preparation characterization structure and surface properties of alloy films The theory of the oxidation of metals and the advantages and disadvantages of using thin metal films in oxidation work are considered in the concluding chapter along with a brief discussion on their use in kinetic and mechanistic studies Research scientists and graduate students who are interested in the fundamentals of adsorption and catalysis will find this volume invaluable
