Astrocyte-Neuron Interactions Sergey Fedoroff, Bernhard H.J. Juurlink, J. Ronald Doucette, 2013-06-29 This volume is made up of papers presented at the Second International Altschul Symposium Biology and Pathology of Astrocyte Neuron Interactions The symposium was held in Saskatoon Canada at the University of Saskatchewan in May 1992 in memory of Rudolf Altschul a graduate of the University of Prague and a pioneer in the fields of the biology of the vascular and nervous systems Dr Altschul was Professor and Head of the Department of Anatomy at the University of Saskatchewan from 1955 to 1963 The Altschul Symposia were made possible by an endowment left by Anni Altschul and by other contributions The symposia are held biennially One of the greatest challenges for present day scientists is to uncover the mechanisms of brain function Although cellular anatomy of the nervous system has already been well outlined and indeed was delineated by the beginning of the century experimental analysis of the function of the brain is relatively recent The framework of the brain is made up of stellate cells the astrocytes which are interconnected by means of their processes thus presenting a meshwork through which the neurons send their axons accompanied by oligodendrocytes Microglia are distributed throughout the brain

Biology Bulletin of the Academy of Sciences of the USSR. Akademii nauk SSSR., 1976 **Annual Report** Ontario. Agricultural College and Experimental Farm, Guelph, 1911 *Phase Separation in Living Cells* Riki Kurokawa, 2023-09-29 This book presents the latest cutting edge research on phase separation It discusses the benefits and risks of phase separation for living cells from the perspectives of physics chemistry biology and medicine Phase separation is a physico chemical process that induces a single solution of solvent and intrinsically disordered proteins IDPs to separate into two phases one phase containing only solvent and the other containing IDPs in the solvent A key molecule in phase separation is the intrinsically disordered region IDR proteins IDPs mostly comprised of RNA binding proteins RBPs One of the major roles of phase separation is to generate condensates membrane less organelles including stress granule Cajal body and nucleolus

Biological actions of phase separation in various aspects of science have received increasing attention in recent years. The book consists of four parts. Part I on physics and chemistry includes topics on structural biology of RBP FUS, TLS and chaperone for phase separation, computational approach of phase separation and chemistry of G quadruplex of DNA and RNA. Part II on molecular biology presents molecular mechanism of IDR sequence phase separation and potential cellular function of these labile fibers, formation of membrane-less organelles and roles of noncoding RNAs in phase separation. Part III on biology covers topics from nuclear pore complex, developmental biology, regarding force-dependent remodeling and neurobiology and higher-order brain functions. Finally, Part IV on medicine presents condensates and cancer therapy, pathogenesis of neurodegenerative diseases based on IDPs and responses of microglia to amyloid. The last chapter highlights the latest topic on how the SARS-CoV-2 virus takes advantage of phase separation for its infections. This book brings together the studies of phase separation in each area in a single volume. The comprehensive approach provides new insights to the research and will benefit the readers by responding to the emerging needs for understanding phase separation. **The**

Høeg, 2014-07-01 An illustrated guide to the sweeping diversity of crustacean larval forms Winner of the CHOICE Outstanding Academic Title of the Choice ACRL Crustaceans familiar to the average person as shrimp lobsters crabs krill barnacles and their many relatives are easily one of the most important and diverse groups of marine life Poorly understood they are among the most numerous invertebrates on earth Most crustaceans start life as eggs and move through a variety of morphological phases prior to maturity In Atlas of Crustacean Larvae more than 45 of the world's leading crustacean researchers explain and illustrate the beauty and complexity of the many larval life stages Revealing shapes that are reminiscent of aliens from other worlds often with bizarre modifications for a planktonic life or for parasitization including in some cases bulging eyes enormous spines and aids for flotation and swimming the abundant illustrations and photographs show the detail of each morphological stage and allow for quick comparisons The diversity is immediately apparent in the illustrations spikes that deter predators occur

on some larvae while others bear unique specializations not seen elsewhere and still others appear as miniature versions of the adults Small differences in anatomy are shown to be suited to the behaviors and survival mechanisms of each species Destined to become a key reference for specialists and students and a treasured book for anyone who wishes to understand the invertebrate backbone of marine ecosystems Atlas of Crustacean Larvae belongs on the shelf of every serious marine biologist
