The fact that there is hard evidenced to a red giant sun confirm this theory Highlights of this theory include the following 1 The sun energy source is from magnetic fields from the galactic center 2 The heat induced by the magnetic fields leads to high energy collision between particle in the sun core that creates new particle and increase the sun mass 3 All the stars in the galaxy create new mass so the total mass and the size of the galaxy is increasing 4 The stars in the galaxy eject dust that freefall to the galactic center supermassive black hole Thorough the dynamo effect the gravitational potential energy of the debris and dust is converted to magnetic fields 5 As the galaxy mass and size increase globular clusters are detached form the main galaxy to create new galaxies 6 Galaxies spawn new galaxies and the total number of galaxies in the universe increase 7 The universe expands and accelerates from the increase in the number of the galaxies 8 The Big Bang cosmological model is replaced by a new cosmological model that resembles the steady state theory 9 Stars grow gradually from conversion of energy to mass 10 Stars are born from planets they first grow by accretion and then by conversion of energy to mass 11 Stars fluctuate from main sequence to a red giant When the magnetic fields are strong the star is in the main sequence when the magnetic fields are weakened the star turn to a red giant 12 The sun was a red giant 4 6 billions years ago 13 The planets were created from the strong solar wind of the red giant sun

Transactions of the International Astronomical Union: Reports on Astronomy C. de Jager, 2012-12-06 This volume contains the fifteenth tri annual reports of the Presidents of the forty Commissions of the International Astronomical Union it refers to the progress in our discipline during the three years 1970 1971 and 1972 As compared to earlier volumes a gradual change in character is unmistakable The ever increasing flow of publications combined with the obvious necessity to keep the Reports at a reasonable size and price level has gradually forced the Commission Presidents to be more selective than before in drafting their Reports I have certainly stimulated them into that direction in order that Reports like these be valuable and lasting it seems imperative that the individual contributions have the character of a critical overall review where a fairly complete summary is given of the major developments and discoveries of the past three years and in which the broad developments and new trends be clearly outlined while at the same time essential problems for future research are identified With respect to the latter item I have suggested the Commission Presidents to add to their reports a brief section on scientific priorities for future research in the field of their Commissions In order to save space I have suggested to Commission Presidents that references to published papers are given on the basis of their number in the published issues of Astronomy and Astrophysics Abstracts For instance the indication 06 078 019 or AAA 06 078

Atmospheric Chemistry Detlev Möller, 2022-05-09 The work in your hand contains three main chapters covering the chemistry of the condensed phase in the atmosphere first the different forms of

atmospheric waters precipitation fog and clouds dew and secondly dust now mostly termed particulate matter and more scientifically atmospheric aerosol A third section treats the gases in the atmosphere An introductory chapter covers the roots of the term atmospheric chemistry in its relations to chemistry in general and biogeochemistry as the chemistry of the climate system Furthermore a brief overview of understanding chemical reactions in aqueous and gaseous phase is given It is my aim to pay respect to all persons who studied the substances in the air to those who made small and to them who made giant contributions for the progress in atmospheric science I m not a historian who is able to present the past from a true perspective of their time this also would not be my aim If possible however I try to interpret the past almost limited to experimental fi ndings in the nineteenth century through current values without dismissal of the problems and ideas of earlier scientists In this way it is possible to draw some ideas on the historical chemical state of the air Hence I name this voyage critical However nowhere in this book it is my attention to express my criticism to colleagues and scientifi c ancestors Great scientists too were subject to errors doing science consists from the permanent loop observation interpretation conclusion and again testing against new observation If this volume can contribute more than to be a nice story on atmospheric chemistry then hopefully it inspires the reader to more critical reading of scientifi c publications and not to forget the older one 2022 ASLI Choice Awards Winner The book won the annual Atmospheric Science Librarians International ASLI award For details see here <https://www.aslionline.org/wp/2022-asli-choice-awards-winners> **Air Pollution Translations** ,1973
