**Saber Tooth Cat** Bold Kids,2022-08-15 If you ve ever wondered what the difference between a cat with a saber tooth and one without one might be you ve come to the right place Listed below are Saber Tooth Cat Facts and some interesting trivia about these furry felines Saber toothed mammals are extinct and largely carnivorous Their teeth are extremely long and curved protruding out of their mouths when closed The saber toothed cat had a very sharp set of canines and a mouth nearly twice the size of a lion It didn t have a strong jaw so it could bite bones but it did use its teeth to tear prey to pieces While the cat s teeth were very sharp and used for ripping and tearing they didn t rely on them as a weapon their teeth grew at an impressive eight millimeters per month a rate equal to that of a human The saber toothed cat had long muscular legs and a bobtail Modern cats don t have long tails which provides stability while chasing prey The saber toothed cat would have had to wait until its prey was in position for a fatal bite Instead of chasing prey a saber toothed cat would have had to ambush to protect its teeth Although the Saber Tooth Cat is now extinct they were the most common predators of their time The first saber toothed creatures shared the same jaw structure as leopards and as their jaws grew longer their canines became increasingly sharp and their muscles became stronger the saber toothed cat eventually populated all of North and South America While the saber toothed cat had many species the one most commonly known is *Smilodon fatalis*

*Smilodon - Saber-toothed Tiger* Enrique Fiesta, John Davidson, 2015-02-08 Smilodon Saber toothed Tiger Table of Contents Introduction Chapter 1 Appearance Chapter 2 Behavior Chapter 3 Environment Conclusion Author Bio Introduction Greetings young reader Today we are going to take a step back in time and enter the age of prehistoric mammals Mammals are animals with hair or fur that secrete milk for their babies and typically give birth to live young as opposed to laying eggs These prehistoric mammals are an extinct species of animal that began to live on the Earth about 2 5 million years ago Some

of them still thrived as recently as 10 000 years ago Extinct means that they no longer exist These prehistoric mammals are some of the most intriguing and awe inspiring animals that have existed on our planet The prehistoric mammals strange shapes sizes and behaviors make them inherently worthy of study and interest Even more than these reasons the study of these mammals itself is an incredible adventure which requires thought and imagination The study of prehistoric animals helps you to appreciate just how mysterious nature really is Our planet supports not only us and the animals that live today but it even supported creatures as gigantic and strange as the giant sloths and huge cave dwelling bears just think how cool that is I hope that you bring a spirit of openness and wonder to your study of the prehistoric animals and that you come to appreciate the mystery and value of this imaginative adventure Today we are going to discuss the Smilodon The Smilodon is also commonly referred to as the saber tooth tiger or saber tooth cat because of its long canines We are going to learn about the Smilodon and explore the world that it lived in We know what we know about the prehistoric mammals from a variety of sources including fossils biology and other scientific disciplines Fossils are the ancient remains of these animals the most familiar being their bones Biological science is the study of life in general but many scientists compare prehistoric animals to modern day animals to support their theories Before a talk about animals can take place it is important that we discuss the theory of evolution Evolutionary theory purports that all the animals we know and see today are the direct descendants of animals that existed millions of years ago The dinosaurs and other creatures that existed millions of years ago either died out or gradually changed into different animals For instance birds are considered to be surviving dinosaurs because their dinosaur ancestors survived the dinosaur extinction event we will discuss this later The prehistoric mammals ancestor was an animal that outlived the dinosaurs and survived the extinction event Remember that any time you see an *n* next to the name of an animal it means that a book has been written about this animal in the Dinosaur Books for Young Readers series Any word written in bold is an important scientific term which is defined in text Italics are used to denote the first time an animal's name is mentioned in the book **Sabertooth Tiger** Gary Jeffrey, 2017 Provides a revealing look at the Sabertooth Tiger through a fictional graphic novel story accompanied by nonfiction facts and fossil record information Ancient Animals: Saber-toothed Cat Sarah L.
