Reading and Literature National Assessment of Educational Progress (Project), 1972 By the early 1960 s billions of dollars were invested annually in the formal education of young people The only available measures of educational quality resulting from this investment were based upon inputs into the educational system such as teacher student ratios number of classrooms and number of dollars spent per student The typical state administered or school administered achievement tests which provided scores whereby one student could be compared with others were useful for categorizing students but those scores provided extraordinarily little information about what students were learning After much study an assessment project was inaugurated to fill the information gap by periodically assessing the knowledge understanding skills and attitudes in ten subject areas at four age levels 9 13 17 and young adults aged 26 35 The National Assessment of Educational Progress NAEP is to be an ongoing project it will eventually be able to assess changes in knowledge understanding skills and attitudes
