surgery and beauty and electrotherapy all of which concerned thinkers a hundred years ago are reappearing at a staggering rate and in diverse national contexts In the twentieth century such problems were viewed as only historical concerns Yet in the twenty first century we once again find ourselves confronting their implications In this fascinating volume Gilman looks at historical and contemporary debates about the stigma associated with biologically transmitted diseases He shows that there is no indisputable way to measure when a disease or therapy will reappear or how it may be perceived at any given moment in time Consequently Gilman focuses on the socio cultural and political implications that the reappearance of such diseases has had on contemporary society His approach is to show how culture embedded in cultural objects both feeds and is fed by the claims of medical science as for example the reappearance of race as a cultural as well as a medical category If the twentieth century was the age of physics in the latter part of the past century and certainly in the twenty first century biological concerns are recapturing central stage Achievements of the biological sciences are changing the public s sense of what constitutes cutting edge science and medicine None has captured the public imagination more effectively than the mapping of the human genome and the promise of genetic manipulation which fuel what Gilman calls a second age of biology Although not without controversy the role of genetics appears to be key Gilman puts contemporary debates in historical context showing how they feed social and cultural concerns as well as medical possibilities
