[relativelysimple](#) **Mass** Jim Baggott, 2017-04-15 Everything around us is made of stuff from planets to books to our own bodies Whatever it is we call it matter or material substance It is solid it has mass But what is matter exactly We are taught in school that matter is not continuous but discrete As a few of the philosophers of ancient Greece once speculated nearly two and a half thousand years ago matter comes in lumps and science has relentlessly peeled away successive layers of matter to reveal its ultimate constituents Surely we can't keep doing this indefinitely We imagine that we should eventually run up against some kind of ultimately fundamental indivisible type of stuff the building blocks from which everything in the Universe is made The English physicist Paul Dirac called this the dream of philosophers But science has discovered that the foundations of our Universe are not as solid or as certain and dependable as we might have once imagined They are instead built from ghosts and phantoms of a peculiar quantum kind And at some point on this exciting journey of scientific discovery we lost our grip on the reassuringly familiar concept of mass How did this happen How did the answers to our questions become so complicated and so difficult to comprehend In *Mass* Jim Baggott explains how we come to find ourselves here confronted by a very different understanding of the nature of matter the origin of mass and its implications for our understanding of the material world Ranging from the Greek philosophers Leucippus and Democritus and their theories of atoms and void to the development of quantum field theory and the discovery of a Higgs boson like particle he explores our changing understanding of the nature of matter and the fundamental related concept of mass *An Earthling's Guide to Outer Space* Bob McDonald, 2019-10-22 Beloved science commentator Bob McDonald takes us on a tour of our galaxy unraveling the mysteries of the universe and helping us navigate our place among the stars How big is our galaxy Is there life on those distant planets Are we really made of star dust And where do stars even come from In *An Earthling's Guide to Outer Space* we finally have the answers to all those questions and more With clarity wisdom and a great deal of enthusiasm McDonald explores the curiosities of the big blue planet we call home as well as our galactic neighbours from Martian caves to storm clouds on Jupiter to the nebulae at the far end of the universe So if you're pondering how to become an astronaut or what dark matter really is or how an asteroid wiped out the dinosaurs look no further Through a captivating mix of stories experiments and illustrations McDonald walks us through space exploration past and present and reveals what we can look forward to in the future *An Earthling's Guide to Outer Space* is sure to satisfy science readers of all ages and to remind us

earthbound terrestrials just how special our place in the universe truly is Cracking the Code Thom Hartmann, 2008-09-02 By the bestselling author and XM and Sirius Satellite radio host heard on more than eighty radio stations coast to coast seven days a week Shows progressives how to master the science and technology of persuasive communication and counter the right wing message machine Offers exercises and examples throughout to help readers put the concepts they re learning into practice Millions of working Americans talk act and vote as if their economic interests match those of the megawealthy the multinational corporations and the politicians who do their bidding How did this happen According to Air America radio host Thom Hartmann the apologists of the Right have become masters of the subtle and largely subconscious aspects of political communication It s not an escalation in Iraq it s a surge it s not the inheritance tax it s the death tax it s not drilling for oil it s exploring for energy Conservatives didn t intuit the path to persuasive messaging they learned these techniques There is no reason why progressives can t learn them too In Cracking the Code Hartmann shows you how Drawing on his background as a psychotherapist and advertising executive as well as a national radio host he breaks down the science and technology of effective communication so you can apply it to your own efforts to counter right wing disinformation It s both an art and a science as Hartmann explains political persuasion is as much about biology as ideology about knowing how the brain processes information and how that influences the way people perceive messages make decisions and form a worldview Throughout the book Hartmann shows you precisely how to master this technology providing examples dating back to the time of the Founding Fathers As you read deeply in this book you ll see things you hadn t realized were there in everything from advertising to political rants and discover abilities you didn t know you had Whether you re a politician an activist a volunteer or a concerned citizen you ll develop a strong sense for how to reach into that part of the collective human psyche where we truly do have the power to create a new world Uncommon Knowledge Al McDowell, 2009 This book develops new science of gravity and light based on the century old Le Sage theory of an ether that was replaced by Einstein s Theory of Relativity After presenting astrophysical data contradicting the theory that the universe is expanding from a Big Bang experiments believed to prove Relativity are shown to actually prove the ether theory instead Freedom from the speed limit of light enables a science of subatomic particles traveling faster than light to produce gravity electric and magnetic fields light and radio waves Major technical innovations include solving the two fundamental problems with the Le Sage gravity theory and extending this theory to electromagnetism and consciousness This is a theory of everything that explains the heretofore unknown causes of the forces of nature This book builds on the works of Zecharia Sitchin and other authors to explain how life developed on Earth and that evolution requires direction from intelligence that dwells in the subatomic particles on which this theory of gravity and light is based Our biblical God is shown to be a composite of Sitchin s extraterrestrial gods who colonized Earth and the intelligence that dwells alongside our own mind in the particles from which the universe is constructed and powered **Scientific Indiana** Duane Nickell, 2021 Scientists who lived worked or were

Krauss, 2012-01-10 Bestselling author and acclaimed physicist Lawrence Krauss offers a paradigm shifting view of how everything that exists came to be in the first place Where did the universe come from What was there before it What will the future bring And finally why is there something rather than nothing One of the few prominent scientists today to have crossed the chasm between science and popular culture Krauss describes the staggeringly beautiful experimental observations and mind bending new theories that demonstrate not only can something arise from nothing something will always arise from nothing With a new preface about the significance of the discovery of the Higgs particle A Universe from Nothing uses Krauss's characteristic wry humor and wonderfully clear explanations to take us back to the beginning of the beginning presenting the most recent evidence for how our universe evolved and the implications for how it's going to end Provocative challenging and delightfully readable this is a game changing look at the most basic underpinning of existence and a powerful antidote to outmoded philosophical religious and scientific thinking
