Runaway Brain The Evolution Of Human Uniqueness:

The Runaway Brain Christopher Wills, 1994 **Reason in Revolt** Alan Woods , Ted Grant , 2015-12-15 The achievements of science and technology during the past century are unparalleled in history They provide the potential for the solution to all the problems faced by the planet and equally for its total destruction Allegedly scientific theories are being used to prove that criminality is caused not by social conditions but by a criminal gene Black people are alleged to be disadvantaged not because of discrimination but because of their genetic make up Of course such science is highly convenient to right wing politicians intent on ruthlessly cutting welfare In the field of theoretical physics and cosmology there is a growing tendency towards mysticism The Big Bang theory of the origin of the universe is being used to justify the existence of a Creator as in the book of Genesis For the first time in centuries science appears to lend credence to religious obscurantism Yet this is only one side of the story *Society: Progress and Force (Criteria and First Principles)* Олег Арин / Алекс Бэттлер, As a sequel to *Dialectics of Force* Ont bia this book is dedicated to the progress and force of society topics that at first glance may seem trite since mountains of literature are written on this subject The author however having conscientiously presented the views on progress and force of all prominent thinkers over the past and the present chose to follow a distinct path and formulated the criteria of progress based on entirely different scientific paradigms Moreover he dared to formulate the two Principles of Social Development which are akin in their fundamental nature to the first and second laws of thermodynamics This book is intended for teachers and students of philosophical and social sciences as well as for all those who are interested in the problems of man and humanity **Society-- a Complex Adaptive System** Walter Frederick Buckley, 1998 First Published in 1998 Routledge is an imprint of Taylor Francis an informa company Society Walter Buckley, 1998-08-27 First published in 1998 *Society A Complex Adaptive System* aims to re establish a firm scientific foundation for contemporary sociology incorporating current extensions to a systems approach such as complex adaptive systems and aspects of contemporary dynamic systems theory The essays brought together to form this volume address general problem areas in basic theory and methodology The work then develops to focus on the more empirically relevant core of social theory socio cultural regulation and control with concern for adaptive structure changing and structure conserving aspects In addition the book is focused on dynamic processes rather than static structural or functional concepts

The Balance Concept in Health and Nursing Daisy Magalit Rodriguez, 2014-02 The central idea in this book is the concept of balance composed of five universal elements that support survival of all human beings adaptation equilibrium homeostasis needs and health and how it applies to health and nursing Behavior is the key that unlocks these elements through interaction with the internal and external environments The concepts of imbalance personality open systems behavior pyramid culture technology and physical forces are viewed as influences that affect behavior Using existing related concepts and theories derived from the social nursing and physical sciences a novel view of the health illness continuum was

conceptualized From this theoretical background a new nursing model was developed the Balance Health Nursing Model BHNm using balance as a framework in the nursing process A Balance Health Assessment Tool was developed with a sample case study to demonstrate its use This view of balance offers an alternative approach to health and illness and the role of nursing and other health care professionals in their practice settings *Advances in Genetics* ,2011-11-08 The field of Genetics is rapidly evolving and new medical breakthroughs are occurring as a result of advances in knowledge gained from genetics research *Advances in Genetics* continually publishes important timely reviews from leaders in the field that cover a broad range of topics of interest to geneticists and their colleagues in affiliated disciplines Important timely reviews from leaders in the field Cover a broad range of topics of interest to geneticists and their colleagues in affiliated disciplines

Dialectics of Force: Ontóbia. Олег Арин/Алекс Бэттлер, In this book for the first time in world scientific literature the category of Force is presented as an attribute of matter alongside motion space and time This has enabled the author to develop a different approach to the Big Bang to give a new formulation of the border between life and the inorganic world and to offer his own interpretation in the disputes on the mind body problem The category of Ontological Force formulated by the author has allowed him to develop a new definition of the concept of Progress which creates a methodological basis for fruitful research in the fields of the social sciences and international relations **Mystery of the White Lions** Linda Tucker,2010-06-01 The inspiring firsthand account of one woman s journey into African shamanism and the mysteries of the most sacred animal on the continent the legendary White Lion In 1991 Linda Tucker was rescued from a pride of lions in the Timbavati game region by a medicine woman known as the Lion Queen So began Linda s lifelong journey into the wisdom and ceremonies of Old Africa in which humans and lions are able to cross the species barrier Such knowledge is in accordance with the most guarded secrets of Ancient Egypt and humankind s greatest riddle the Sphinx Scientists in our day have established that humankind s most significant evolutionary leap occurred as a result of our ancestors interaction with great cats The White Lion is a genetic rarity within *Panthera leo* and occurred in just one region on Earth Timbavati Today White Lions form the center of the notorious canned trophy hunting industry hand reared captive lions shot in enclosures for gross sums of money By contrast shamans believe that killing a lion sun god is the ultimate sacrilege How the human species treats such precious symbols of God in nature may determine how nature treats the human species Whether we view them as prophetic Lions of God or simply as rare genetic mutations the story of the White Lions is a true legend unfolding in our own extraordinary times Inspiring captivating and thoroughly researched *Mystery of the White Lions* is an unforgettable portrait of these magnificent beasts and of the overwhelming love that has driven Linda s every action to save them Through understanding the White Lion we will understand ourselves and our great role in the chain of being Deepak Chopra

they are collecting Guy Harley Means Florida Geological Survey Illustrates how the dynamic story of ancient life and death and post mortem utilization is accessible from the study of bone shapes It is this very thing that made me want to be a paleontologist in the first place Pennilyn Higgins University of Rochester Written primarily for the avid amateur and beginning paleontologist What Your Fossils Can Tell You offers both experienced and novice fossil hunters and collectors the information needed to correctly identify and interpret the significance of their discoveries Professionals in the field may also use this book as a pictorial resource to assist them in bridging the fields of pathology and archaeology as they relate to paleontology Amateur fossil hunters are presented with the tools they need to recognize significant finds and knowledge of how to collect vertebrate fossils responsibly and legally Robert Sinibaldi in informal collaboration with a number of fossil experts has compiled materials with a wide appeal He explains many of the complex bumps grooves markings and other anomalies that occur on fossil bones and teeth A wealth of photographs helps readers visually identify these features and apply related concepts to their personal collections Along with many common specimens scores of unique fossil items appear here in print for the first time

The Spark of Life Christopher Wills,Jeffrey Bada,2001 The authors examine the enduring mysteries surrounding life s origin did life arise on Earth or on some other planet What did the earliest primitive organisms look like Were they based on RNA DNA or on something we would hardly recognize today They explore the latest research in fields ranging from molecular biology to astronomy on questions surrounding life s origins

Global Catastrophic Risks Nick Bostrom,Milan M. Cirkovic,2011-09-29 A Global Catastrophic Risk is one that has the potential to inflict serious damage to human well being on a global scale This book focuses on such risks arising from natural catastrophes Earth based or beyond nuclear war terrorism biological weapons totalitarianism advanced nanotechnology artificial intelligence and social collapse

Maps of Time David Christian,2011-10-03 An introduction to a new way of looking at history from a perspective that stretches from the beginning of time to the present day Maps of Time is world history on an unprecedented scale Beginning with the Big Bang David Christian views the interaction of the natural world with the more recent arrivals in flora and fauna including human beings Cosmology geology archeology and population and environmental studies all figure in David Christian s account which is an ambitious overview of the emerging field of Big History Maps of Time opens with the origins of the universe the stars and the galaxies the sun and the solar system including the earth and conducts readers through the evolution of the planet before human habitation It surveys the development of human society from the Paleolithic era through the transition to agriculture the emergence of cities and states and the birth of the modern industrial period right up to intimations of possible futures Sweeping in scope finely focused in its minute detail this riveting account of the known world from the inception of space time to the prospects of global warming lays the groundwork for world history and Big History true as never before to its name

An Introduction to Natural Computation Dana H. Ballard,1999-01-22 This book provides a comprehensive introduction to the computational material that forms the underpinnings of the currently

evolving set of brain models It is now clear that the brain is unlikely to be understood without recourse to computational theories The theme of *An Introduction to Natural Computation* is that ideas from diverse areas such as neuroscience information theory and optimization theory have recently been extended in ways that make them useful for describing the brains programs This book provides a comprehensive introduction to the computational material that forms the underpinnings of the currently evolving set of brain models It stresses the broad spectrum of learning models ranging from neural network learning through reinforcement learning to genetic learning and situates the various models in their appropriate neural context To write about models of the brain before the brain is fully understood is a delicate matter Very detailed models of the neural circuitry risk losing track of the task the brain is trying to solve At the other extreme models that represent cognitive constructs can be so abstract that they lose all relationship to neurobiology *An Introduction to Natural Computation* takes the middle ground and stresses the computational task while staying near the neurobiology

Lifting the Scientific Veil Paul Sukys,1999 *Lifting the Scientific Veil* has been written to afford the nonscience student the same meaningful opportunity to explore germane scientific topics as is generally given the science student to learn about the humanities and social sciences Since nonscientists are generally responsible for making laws financing research or at the very least for voting it is essential that they understand the significant impact that science has on everyday life The book is designed to introduce nonscientists in an informative and comprehensible manner to four of the most significant scientific theories of the twentieth century the big bang quantum physics relativity and evolution After each theory is explained informally the book shows how that theory and related technology impact upon one s personal life Legal and political aspects of these theories are explored as well as philosophical and theological implications **The Art of Creating Alpha Males**

C.J. Cronin,2011-05-07 *The Art of Creating Alpha Males* Humans come in two forms male and female and as with other animals males have certain instincts unique to their sex as do females So knowing and using the other sex s instincts to advantage is doable as many a Casanova or Mata Hari will confirm and is the secret to eliciting the type of behavior most desired from them 38 840 words **Anatomy of Spirituality: Portrait of the Soul** Chander Behl,2015-04-27 The domain of spirituality separated from its theological overburden believes in the existence of a spiritual self presumed to be distinctly separate from the psychological self The spiritual eternal self also known as the soul or spirit sometimes supported by an overarching Spirit is asserted to be operating behind the ephemeral self This book takes a contrarian stance it argues that the premise of the soul concept is obtained through the magic of language maintained through the marvel of the brain s biochemistry and sustained through the mirage of the psychological juggernauts of the brain The magic the marvel and the mirage together bring about subtle shifts as the linguistic brain suppresses many psychological details habitually applies mental templates such as inversions and dichotomies and enhances its language by coining religious and spiritual metaphors The consequence of these changes is that the usual flickering self begins to be impressed by itself believing it is buttressed

by something transcendental and eternal within the soul or the spirit The self although indoctrinated during its formative years also begins to assimilate and accept the opinion that the overwhelming weight of religious doctrines and dogmas the overburden signifies as the legitimate proof for the eternal soul *The Self-destruction of the West* Damien François,2007

Voilà désormais plus de 10 000 ans que la civilisation occidentale s'est installée et voilà 10 000 ans qu'elle viole le sens même de la nature la vie En s'appropriant sans concession ce qui l'entourait l'homme de l'Ouest a vu son horizon ployer sous la charge de la destruction qu'il lui avait lui-même réalisée Sommes nous des lycanthropes ou des vampires Ces monstres si terrifiants qui sortent de notre imagination sont ils en réalité la copie de notre comportement d'ivrogne Pr dateurs nous pompons sans remords les énergies qui nous entourent Jusqu'où ira-t-on

Transcending Transaction Alan Shipman,2001-11-22

Transcending Transaction examines recent attempts to show how in theory and history market transaction can emerge from the unregulated interaction of competitive traders Alan Shipman examines the legal informational organisational social and financial foundations of market trade focusing on the possible routes by which it could arise without

Nonzero Robert Wright,2001-04-20 In his bestselling *The Moral Animal* Robert Wright applied the principles of evolutionary biology to the study of the human mind Now Wright attempts something even more ambitious explaining the direction of evolution and human history and discerning where history will lead us next In *Nonzero The Logic of Human Destiny* Wright asserts that ever since the primordial ooze life has followed a basic pattern Organisms and human societies alike have grown more complex by mastering the challenges of internal cooperation Wright's narrative ranges from fossilized bacteria to vampire bats from stone age villages to the World Trade Organization uncovering such surprises as the benefits of barbarian hordes and the useful stability of feudalism Here is history endowed with moral significance a way of looking at our biological and cultural evolution that suggests refreshingly that human morality has improved over time and that our instinct to discover meaning may itself serve a higher purpose Insightful witty profound Nonzero offers breathtaking implications for what we believe and how we adapt to technology's ongoing transformation of the world
