Raymond E Barrett s Build It Yourself Science Laboratory is a classic book that took on an audacious task to show young readers in the 1960s how to build a complete working science lab for chemistry biology and physics and how to perform experiments with those tools The experiments in this book are fearless and bold by today s standards any number of the experiments might never be mentioned in a modern book for young readers Yet many from previous generations fondly remember how we as a society used to embrace scientific learning This new version of Barrett s book has been updated for today s world with annotations and updates from Windell Oskay of Evil Mad Scientist Laboratories including extensive notes about modern safety practices suggestions on where to find the parts you need and tips for building upon Barrett s ideas with modern technology With this book you ll be ready to take on your own scientific explorations at school work or home The Science of Cooking Joseph J. *Science in the Kitchen* E. E. Kellogg, 2024-11-23 The interest in scientific cookery particularly in cookery as related to health has manifestly increased in this country within the last decade as is evidenced by the success which has attended every intelligent effort for the establishment of schools for instruction in cookery in various parts of the United States While those in charge of these schools have presented to their pupils excellent opportunities for the acquirement of dexterity in the preparation of toothsome and tempting viands but little attention has been paid to the science of dietetics or what might be termed the hygiene of cookery A little less than ten years ago the Sanitarium at Battle Creek Mich established an experimental kitchen and a school of cookery under the supervision of Mrs Dr Kellogg since which time researches in the various lines of cookery and dietetics have been in constant progress in the experimental kitchen and regular sessions of the school of cookery have been held The school has gradually gained in popularity and the demand for instruction has become so great that classes are in session during almost the entire year During this time Mrs Kellogg has had constant oversight of the cuisine of both the Sanitarium and the Sanitarium Hospital preparing bills of fare for the general and diet tables and supplying constantly new methods and original recipes to meet the changing and growing demands of an institution numbering always from 500 to 700 inmates These large opportunities for observation research and experience have gradually developed a system of cookery the leading features of which are so entirely novel and so much in advance of the

methods heretofore in use that it may be justly styled A New System of Cookery It is a singular and lamentable fact the evil consequences of which are wide spread that the preparation of food although involving both chemical and physical processes has been less advanced by the results of modern researches and discoveries in chemistry and physics than any other department of human industry Iron mining glass making even the homely art of brick making and many of the operations of the farm and the dairy have been advantageously modified by the results of the fruitful labors of modern scientific investigators But the art of cookery is at least a century behind in the march of scientific progress The mistress of the kitchen is still groping her way amid the uncertainties of medi val methods and daily bemoaning the sad results of the rule of thumb The chemistry of cookery is as little known to the average housewife as were the results of modern chemistry to the old alchemists and the attempt to make wholesome palatable and nourishing food by the methods commonly employed is rarely more successful than that of those misguided alchemists in transmuting lead and copper into silver and gold The new cookery brings order from out the confusion of mixtures and messes often incongruence and incompatible which surrounds the average cook by the elucidation of the principles which govern the operations of the kitchen with the same certainty with which the law of gravity rules the planets
