The Los Angeles River Blake Gumprecht, 2001-04-30 Winner of the J B Jackson Prize from the Association of American Geographers Three centuries ago the Los Angeles River meandered through marshes and forests of willow and sycamore Trout spawned in its waters and grizzly bears roamed its shores The bountiful environment the river helped create supported one of the largest concentrations of Indians in North America Today the river is made almost entirely of concrete Chain link fence and barbed wire line its course Shopping carts and trash litter its channel Little water flows in the river most of the year and nearly all that does is treated sewage and oily street runoff On much of its course the river looks more like a deserted freeway than a river The river's contemporary image belies its former character and its importance to the development of Southern California Los Angeles would not exist were it not for the river and the river was crucial to its growth Recognizing its past and future potential a potent movement has developed to revitalize its course The Los Angeles River offers the first comprehensive account of a river that helped give birth to one of the world's great cities significantly shaped its history and promises to play a key role in its future *Down By the Los Angeles River* Joe Linton, 2005-10-14 In the last decade millions of dollars have been spent on restoring and revitalizing the Los Angeles River and its surroundings Dozens of parks miles of bike trails public art installations and hundreds of trees and plants follow the river as it winds 51 miles through more than 100 communities Down by the Los Angeles River is the first on the ground guide to checking out sites new and old and getting to know the historic river that runs through greater L A The book includes striking original illustrations as well as maps Twenty seven walks and twelve bike rides along the Los Angeles and its tributaries each with directions to the starting point and descriptions of natural historic and artistic features along the way The river paths are already popular for walkers and joggers bicyclists dog walkers historians and bird watchers a readymade audience for this one of a kind book Managing Water Dorothy Green, 2007-10-09 Dorothy Green has produced a tour de force with her wonderfully clear exposition of the evolution of water management successes and failures in the greater Los Angeles area and much of the state Norris Hundley author of *The Great Thirst Californians and Water A History* If you have questions about water management in California this book holds the answers Water delivery systems make life possible in California from natural watersheds and rivers to man made aqueducts treatment plants and delivery pipes Dorothy Green's *Managing Water* uses the Los Angeles area to tell a statewide story of water supply drinking water quality and treatment conservation recycling and future planning How is water kept pure or when polluted made clean again What contaminants lurk in groundwater basins What agency delivers water to your home And how are water policy decisions made that effect your future This is a detailed summary of the complex world of California water management that provides common sense recommendations for the future David Carle author of *Introduction to Water in California* For students of California water Dorothy Green uses the complexity of water management in the Los Angeles area as the essential classroom This is required

Sequel to Suburbia Nicholas A. Phelps, 2015-12-09 How the decentralized automobile oriented and fuel consuming model of American suburban development might change In the years after World War II a distinctly American model for suburban development emerged The expansive rings of outer suburbs that formed around major cities were decentralized and automobile oriented an embodiment of America's postwar mass production mass consumption economy But alternate models for suburbia including transit oriented development smart growth and New Urbanism have inspired critiques of suburbanization and experiments in post suburban ways of living In *Sequel to Suburbia* Nicholas Phelps considers the possible post suburban future offering historical and theoretical context as well as case studies of transforming communities Phelps first locates these outer suburban rings within wider metropolitan spaces describes the suburbs as a spatial fix for the postwar capitalist economy and examines the political and governmental obstacles to reworking suburban space He then presents three glimpses of post suburban America looking at Kendall Dadeland in Miami Dade County Florida Tysons Corner in Fairfax County Virginia and Schaumburg Illinois near Chicago He shows Kendall Dadeland to be an isolated New Urbanism success describes the re planning of Tysons Corner to include a retrofitted central downtown area and examines Schaumburg's position as a regional capital for Chicago's northwest suburbs As these cases show the reworking of suburban space and the accompanying political process will not be left to a small group of architects planners and politicians Post suburban politics will have to command the approval of the residents of suburbia

Current Issues of Water Management Uli Uhlig, 2011-12-02 There is an estimated 1.4 billion km³ of water in the world but only approximately three percent 39 million km³ of it is available as fresh water Moreover most of this fresh water is found as ice in the arctic regions deep groundwater or atmospheric water Since water is the source of life and essential for all life on the planet the use of this resource is a highly important issue Water management is the general term used to describe all the activities that manage the optimum use of the world's water resources However only a few percent of the fresh water available can be subjected to water

management It is still an enormous amount but what's unique about water is that unlike other resources it is irreplaceable This book provides a general overview of various topics within water management from all over the world The topics range from politics current models for water resource management of rivers and reservoirs to issues related to agriculture Water quality problems the development of water demand and water pricing are also addressed The collection of contributions from outstanding scientists and experts provides detailed information about different topics and gives a general overview of the current issues in water management The book covers a wide range of current issues reflecting on current problems and demonstrating the complexity of water management

Not So Golden State Char Miller, 2016-08-22 In *Not So Golden State* leading environmental historian Char Miller looks below the surface of California's ecological history to expose some of its less glittering conundrums In this necessary work Miller asks tough questions as we stand at the edge of a human induced natural disaster in the region and beyond He details policy steps and missteps in public land management and examines the impact of recreation on national forests parks and refuges assessing efforts to restore wild land habitat riparian ecosystems and endangered species Why during a devastating five year drought is the Central Valley's agribusiness still irrigating its fields as if it were business as usual What's unusual Miller reveals is that northern counties rich in groundwater sell it off to make millions while draining their aquifers toward eventual mud Why when contemporary debate over oil and gas drilling questions reasonable practices are extractive industries targeting Chaco Canyon National Historic Park and its ancient sites which are of inestimable value to Native Americans How do we begin to understand local a concept of hope for modern environmentalism After all Miller says what we define as local determines how we might act in its defense To inhabit a place requires place based analyses whatever the geographic scope examinations rooted in a precise physical reality To make a conscientious life in a suburb floodplain fire zone or coastline requires a heightened awareness of these landscapes past so that we can develop an intensified responsibility for their present condition and future prospects Building a more robust sense of justice is the key to creating resilient habitable and equitable communities Miller turns to Aldo Leopold's insight that all history consists of successive excursions from a single starting point a location humans return to again and again to organize another search for a durable scale of values This quest a reflection of our ambition to know ourselves in relation to time and space to organize our energy and structure our insights is as inevitable as it is unending Turning his focus to the tensions along the California coastline Miller ponders the activities of whale watching and gazing at sea otters thinking about the implications of the human desire to protect endangered flora and fauna which makes the shoreline a fraught landscape and a source of endless stories about the past and present In the Los Angeles region these connections are more obvious given its geography The San Gabriel Mountains rise sharply above the valleys below offering some of the steepest relief on the planet Three major river systems the Santa Ana San Gabriel and Los Angeles cut through the range's sheer canyons carrying an astonishing amount of debris that once crashed into low lying areas with churning force Today the rivers are

constrained by flood control dams and channels Major wildfires sparked by annual drought high heat and fierce Santa Ana winds move at lightning speed and force thousands to flee The city's legendary smog whose origins lie in car culture was fueled in part by oil brought to the region's surface in the late nineteenth century It left Angelenos gasping for breath as climatic conditions turned exhaust into a toxic ozone layer trapped by the mountains that back in the day were hard to see Clearing the befouled skies took decades Every bit as complex is the enduring effort to regenerate riparian health and restore wildlife habitat in a concrete hardened landscape The emerging tensions are similar to those threading through the U S Forest Service's management of the Angeles National Forest exacerbated whenever a black bear ambles into a nearby subdivision How we build ourselves into these spaces depends on the removal of competing users or uses a historic strawberry patch gives way to a housing development a memorial forest goes up in smoke a small creek tells a larger tale of the human impress and struggles over water a perennial issue in this dry land remind us we're not as free of the past as we'd like to think Neither are we removed from the downwind consequences of our choice to live in fire's path The West does not burn every summer it just seems that way And not every fire is a smoke signal of distress Picking through the region's fiery terrain is as tricky as trying to extinguish a roaring blaze in the August heat There are lessons to be had by examining how we respond to the annual conflagrations The Wallow Fire which in 2011 burned hundreds of thousands of acres in remote Arizona sparked equal amounts of political grandstanding and hand wringing about wildfire fighting strategies Beyond the headlines and flashy smoke filled images lay another reality The creation of defensible space and the thinning of forests communities signs of homeowners and state and federal agencies proactive intervention meant few structures burned during the monthlong firestorm That such good news is rarely reported is part and parcel of another ethical dilemma too rarely acknowledged the decision to live in fire zones should come coupled with homeowners responsibility to do all they can to ensure their homes don't go up in smoke How they build their homes and landscape its environs are essential steps in defending their space That obligation comes with another made clear in the 2013 Yarnell Hill which took the lives of nineteen firefighters To make our houses fire safe is to give firefighters a fighting chance This reciprocity and the social compact it depends on require us to believe we inhabit common ground with our neighbors a realization that should build a stronger sense of community But it's a tough concept to promote in a bewilderingly antisocial political environment when budgets for fire prevention are slashed as part of larger efforts to defund the nation state Or when the very reasons some seek to live in isolated mountainous environs clash with the larger need to act in concert with their communities Fires illuminate many things not least the ties that bind and those that are frayed Miller develops his argument from a variety of places and perspectives Most of the pieces ask a series of questions about a particular landscape Gila National Forest Death Valley Zion Arches and Rocky Mountain National Parks and a host of other iconic western scenic spots Why do we conceive of wilderness as a preserve separate and inviolate Who benefits or does not from the idea that such landscapes are or ought to be

untrammeled Why has this intellectual construction and the preservationist ethos it depends on come to dominate contemporary environmentalism Related queries bubble up after Miller spends time in the newest national park Pinnacles in central California or one of the most venerable the Grand Canyon in northern Arizona What impact has the long history of tourism and recreation had on these public lands Maintaining trails that weave through the Yosemite Valley is an arduous incessant task made more difficult by the visitors pouring in to John Muir's favorite terrain or rushing to rock climb in Minerva Hoyt's beloved Joshua Tree Still more daunting is the prospect of sustained ecological restoration and habitat regeneration under current conditions and those that climate change is generating across the West Once again Aldo Leopold can be a guide A member of a biotic team is shown by an ecological interpretation of history he once observed adding that many historical events hitherto explained solely in terms of human enterprise were actually biotic interactions between people and land Only when the concept of land as a community really penetrates our intellectual life will history as a subject and methodology become fully realized Not So Golden State contributes powerfully toward the realization of this enduring cross generational endeavor
