A Comprehensive Overview.** Dr. Hakim Saboowala, Understanding Three Arrays of Mechanism of Hair Greying at Molecular Level A Comprehensive Overview Hair graying is a common process occurring in people as they age 50% of the population has about 50% gray hair at the age of 50 years known as the 50 50 50 rule The traditional view is that hair graying is caused by exhaustion of the pigmentary potential of the melanocytes of hair bulbs Melanocyte dysfunction may be attributable to the effects of toxic reactive oxygen species on melanocyte nuclei and mitochondria A recent study suggests that bulge melanocyte stem cells MSCs are the key cells in play Active hair growth may produce oxidative or genotoxic stress in hair bulge Taken together hair graying may be caused by MSC depletion by genotoxic stress in the hair bulge Thus an effort has been made in this Booklet to review previous studies on the mechanism of graying and seek to offer some new insights along with several illustrations for better understanding Dr H K Saboowala M B Bom M R S H London **Molecular and Cellular Mechanisms in Disease** J.L. Van Lancker, 2012-12-06 In spite of ingenious experiments imaginative theories and unshakable faith in supreme forces there is no way to know how life began What is certain is that in the course of the development of the universe existing sources of energy fused to generate atoms and atoms mingled to become small molecules At some point by chance or design according to one's belief but no one's evidence small molecules such as hydrogen oxygen carbon dioxide water and ammonia reacted to yield larger molecules with the property most essential to life self replication Such molecules had to achieve a proper balance between the stability needed for their survival in the environment and the mutability for the generation of many forms of life How amino acids were created or how DNA RNA and proteins developed remains a mystery But we know that a simple core of nucleic acid embedded in a protein coat made the simplest unit of life except for viroids Whether viruses are a primitive or degenerated form of life is not known Once proteins appeared their great structural plasticity allowed them to react with other elements such as sulfur iron copper and zinc After an incalculable number of years some of the proteins became capable of catalyzing the synthesis of new nucleic acids new proteins and other compounds such as polysaccharides and lipids **Current Catalog** National Library of Medicine (U.S.), 1980 First multi year cumulation covers six years 1965 70 **Mechanisms in pigmentation: proceedings...** Vincent J.
