Strategic Warfare in Cyberspace Gregory J. Rattray, 2001 A comprehensive analysis of strategic information warfare waged via digital means as a distinct concern for the United States and its allies In the information age information systems may serve as both weapons and targets Although the media has paid a good deal of attention to information warfare most treatments so far are overly broad and without analytical foundations In this book Gregory Rattray offers a comprehensive analysis of strategic information warfare waged via digital means as a distinct concern for the United States and its allies Rattray begins by analyzing salient features of information infrastructures and distinguishing strategic information warfare from other types of information based competition such as financial crime and economic espionage He then establishes a conceptual framework for the successful conduct of strategic warfare in general and of strategic information warfare in particular Taking a historical perspective he examines U S efforts to develop air bombardment capabilities in the period between World Wars I and II and compares them to U S efforts in the 1990s to develop the capability to conduct strategic information warfare He concludes with recommendations for strengthening U S strategic information warfare defenses

Technology Policy J. D. Kenneth Boutin,2012-12-31 Since the end of the Cold War U S policymakers have faced the challenge of addressing the technological requirements of both economic competitiveness and national security Promoting the technological objectives of competitiveness and security poses a daunting task as these objectives can differ significantly in terms of autonomy the private sector s role and the time frame involved The difficulties inherent in meeting these competing needs for technological investment and resources are exacerbated by growing technological globalization American Technology Policy analyzes the ongoing efforts of politicians legislators policymakers and industry leaders to balance their often conflicting technological requirements J D Kenneth Boutin examines recent trends and developments in American technology policy as it strives to support high technology firms without undermining national security He then considers issues of autonomy relations between the federal government and industry and the time frame involved in formulating and implementing policy initiatives all in the context of globalization Though satisfying the ambitious American technological agenda is difficult it is impossible for authorities to avoid making the effort given the high stakes involved Boutin s analysis is intended to inform those who are charged with prioritizing and balancing the technological needs of national defense and economic growth Although the post Cold War technology policy of the United States has been characterized by efforts to achieve a balance between these two competing priorities the dominant focus remains on national security Boutin explains the ways in which American authorities seek to limit the extent of compromise necessary by working with local and foreign actors and by encouraging structural changes in the environment for technological development application and diffusion

Shaping American Military Capabilities after the Cold War Richard

Lacquement,2003-02-28 For more than 40 years U S defense policy and the design of military capabilities were driven by the threat to national security posed by the Soviet Union and its allies As the Soviet Union collapsed analysts wondered what effect this dramatic change would have upon defense policy and the military capabilities designed to support it Strangely enough this development would ultimately have little effect on our defense policy Over a decade later American forces are a smaller but similar version of their Cold War predecessors The author argues that despite many suggestions for significant change the bureaucratic inertia of comfortable military elites has dominated the defense policy debate and preserved the status quo with only minor exceptions This inertia raises the danger that American military capabilities will be inadequate for future warfare in the information age In addition such legacy forces are inefficient and inappropriately designed for the demands of frequent and important antiterrorist and peace operations Lacquement offers extensive analysis concerning the defense policymaking process from 1989 to 2001 including in particular the 2001 Quadrennial Defense Review This important study also provides a set of targeted policy recommendations that can help solve the identified problems in preparing for future wars and in better training for peace operations
