Sedimentary Processes Quantification Using Radionuclides:

Sedimentary Processes: Quantification Using Radionuclides J. Carroll, I. Lerche, 2003-09-19 The advent of radionuclide methods in geochronology has revolutionized our understanding of modern sedimentary processes in aquatic systems This book examines the principles of the method and its use as a quantitative tool in marine geology with emphasis on the Pb 210 method The assumptions and consequences of models and their behaviour are described providing the necessary background to assess the advantages and trade offs involved when choosing a particular model for application One of the purposes of this volume is to disentangle the influences of complicating factors such as sediment flux variations post depositional diffusion of radionuclides and bio irrigation of sediments to arrive at sediment ages and to properly assess the attendant data uncertainty Environmental impacts of chemical nuclear or other waste material are of concern in a variety of areas around the world today A number of relevant examples are included demonstrating how dating models are useful for determining sources of contaminants and interpreting their influence on the environment The book is set at a level so that an able student or professional should have no difficulty in following the procedures and methods developed Each chapter includes case histories showing the strengths and weaknesses of a given procedure with respect to a data example Included with this volume is the computer source code of a new generation of modelling tools based on inverse numerical analysis techniques This first generation of the modelling tool is included along with detailed instructions and examples for its use in an appendix

Aquaculture Ecosystems Saleem

Mustafa, Rossita Shapawi, 2015-08-24 *Aquaculture Ecosystems* contains a thorough and exciting synthesis of current information on aquaculture practices and substantial discussion of the way forward in transforming the aquaculture industry by improving its sustainability. This important book includes discussion of all the current major issues relating to aquaculture practices in relation to the ecology of their situations, environmental concerns and details of how sustainability can be improved. Efforts have been made to include chapters that go beyond the stage of debate on old topics providing conclusions to provide leads for action plans and practices addressing modern challenges such as global climate change. Commencing with a chapter covering concerns and solutions centred around seafood security, the following chapters cover the biology and behavior of aquatic animals and their selection for use in aquaculture systems, integrated multi trophic aquaculture, nutrient inputs and pollution, biofouling, blue carbon stocks in coastal aquaculture, climate change adaptations and knowledge management in aquaculture. Written by internationally recognized experts in aquaculture and ecology and edited by Saleem Mustafa, well known for his work in aquatic sciences, the book provides a great deal of use and interest to all those involved in aquaculture planning and development, environmental sciences and aquatic ecology. All libraries in universities and research establishments where biological sciences and aquaculture are studied and taught should have copies of this vital reference on their shelves.

Radiological Risk Assessment and Environmental Analysis John E. Till, Helen A. Grogan, 2008-07-10 *Radiological Risk Assessment and Environmental Analysis* comprehensively explains methods used for estimating risk to people exposed to radioactive materials released to the environment by nuclear facilities or in an emergency such as a nuclear terrorist event. This is the first book that merges the diverse disciplines necessary for estimating where radioactive materials go in the environment and the risk they present to people. It is not only essential to managers and scientists but is also a teaching text. The chapters are arranged to guide the reader through the risk assessment process beginning with the source term where the radioactive material comes from and ending with the conversion to risk. In addition to presenting mathematical models used in risk assessment, data is included so the reader can perform the calculations. Each chapter also provides examples and working problems. The book will be a critical component of the rebirth of nuclear energy now taking place as well as an essential resource to prepare for and respond to a nuclear emergency.

International Conference on Isotopes and Environmental Studies Pavel P. Povinec, J.A. Sanchez-Cabeza, 2006-03-08 The contents of the book are assembled from selected papers presented during the International Conference on Isotopes in Environmental Studies AQUATIC FORUM 2004 convened in Monaco from 25 to 29 October 2004 which was the most important gathering of the year of isotope environmental scientists. The book reviews the present state of the art isotopic methods for better understanding of key processes in the aquatic environment responsible for its future development and its protection. The main highlights include the latest developments in the study of the behaviour, transport and distribution of isotopes in the aquatic environment, recent climate change records using isotopic tracers in the environment, global isotopic oceanic studies.

new trends in radioecological investigations and modelling impact of groundwater seawater interactions on coastal zones groundwater dynamics and modelling important for management of freshwater resources development of new isotopic techniques such as AMS RIMS and ICPMS and their applications in environmental studies new trends in radiometrics underground techniques new in situ radiometrics technologies and many other exciting topics which were presented and discussed during the Conference The proceedings constitute an important contribution to the environmental isotopic research In publishing this book the aim is to make the use of isotopes more widespread in the environmental disciplines and to further stimulate work in this exciting field Presents selected papers from the International Conference on Isotopes in Environmental Studies AQUATIC FORUM 2004 Addresses state of the art isotopic methods for better understanding of key processes in the aquatic environment Aims to make the use of isotopes more widespread in the environmental disciplines and to further stimulate work in this exciting field

Handbook of Radioactivity Analysis Michael F. L'Annunziata,2012-08-16 Authoritative reference providing

the principles practical techniques and procedures for the accurate measurement of radioactivity *TENR - Technologically Enhanced Natural Radiation* Anselmo Salles Paschoa, F. Steinhausler, 2009-12-31 This book on TENR discusses the basic Physics and Chemistry principles of natural radiation The current knowledge of the biological effects of natural radiation is summarized A wide variety of topics from cosmic radiation to atmospheric terrestrial and aquatic radiation is addressed including radon thoron and depleted uranium Issues like terrorism and geochronology using natural radiation are also examined Comprehensive global TENR data assembly Critical assessment of the significant radiological impact of TENR on man and the environment as compared to radiological impact from man made sources in nuclear technology and nuclear medicine Illustration of the importance of TENR for the future conceptual development of radiation protection **Marine Radioactivity**, 2004-09-17 This book on Marine Radioactivity sets out to cover most of the aspects of marine radioactivity which have been the focus of scientific study in recent decades The authors and their reviews divide into topic areas which have defined the field over its history They cover the suite of natural radioisotopes which have been present in the oceans since their formation and quantitatively dominate the inventory of radioactivity in the oceans Also addressed are the suite of artificial radionuclides introduced to the oceans as a consequence of the use of the atom for development of nuclear energy nuclear weapons and various applications of nuclear science The major source of these continues to derive from the global fallout of atmospheric tests of nuclear weapons in the 1950s and 1960s but also includes both planned and accidental releases of radioactivity from both civilian and military nuclear technology The other division of the major study direction depends on whether the objective is to use the radionuclides as powerful tools to study oceanic processes to describe and understand the ocean distribution of the various natural or artificial radionuclides or to assess the different radionuclides impact on and pathways to man or marine organisms The oceans cover 70% of the Earth's surface and thus contains a corresponding large share of the Earth's radioactivity Marine Radioactivity covers topics of recent scientific study in this young field It examines both natural radioactivity radioactivity naturally present in oceans since their formation and artificial radioactivity radioactivity introduced by man and use of atomic and nuclear energy with regard to possible effects on the global environment **Natural and artificial radionuclides as tracers of ocean processes** Jixin Qiao, Núria Casacuberta, Paul McGinnity, 2023-04-26 **Tropical Radioecology** J.R. Twining, 2012-12-31 Tropical Radioecology is a guide to the wide range of scientific practices and principles of this multidisciplinary field It brings together past and present studies in the tropical and sub tropical areas of the planet highlighting the unique aspects of tropical systems Until recently radioecological models for tropical environments have depended upon data derived from temperate environments despite the differences of these regions in terms of biota and abiotic conditions Since radioactivity can be used to trace environmental processes in humans and other biota this book offers examples of studies in which radiotracers have been used to assess biokinetics in tropical biota Features chapters co authored by world experts that explain the origins inputs distribution

Freshwater and Estuarine Radioecology G. Desmet, 1997 Hardbound The Chernobyl accident drew attention to the difficulties of understanding the dynamics of radionuclide transport through the environment using older methods developed after the pseudo steady state pollution resulting after the weapons testing fallout More recent approaches which are reported in this book have incorporated both the dynamic aspects highlighted by the pulse Chernobyl input and the importance of improvement in models that can be brought about by constraining parameters on the basis of a knowledge of the fundamental physics chemistry biology and ecology of the ecosystems involved The papers within this volume include hydrodynamic models of suspended solids transport ion exchange interpretation of radionuclide sorption approaches applying a knowledge of membrane transport kinetics to the uptake of radionuclides by biota the effects of different ecological niches on the relative uptake of radionuclides by different species
