Biology and Biotechnology of Environmental Stress Tolerance in Plants Aryadeep

Roychoudhury,2023-07-21 Abiotic stresses such as drought high salt cold heat UV radiation heavy metal pollution etc are increasingly responsible for restricting plant growth and agricultural production and are becoming more alarming due to threats from global climate change To combat these threats this new 3 volume set provides a comprehensive understanding of the mechanisms that mediate biosynthesis accumulation and degradation of plant metabolites to improve crop production and enhance abiotic stress tolerance in plants Volume 1 Secondary Metabolites in Environmental Stress Tolerance focuses exclusively on the diverse secondary metabolites that play a major role in the adaptation of plants to the environment and in overcoming stress conditions as well as their implications for enhancing tolerance mechanisms The book presents information on the protective role rendered by a wide array of antioxidative secondary metabolites and their regulation during diverse environmental stress Volume 2 Trace Elements in Environmental Stress Tolerance throws light on the different inorganic trace elements including metal nanoparticles that help to deal with environmental stresses While these elements at high level create considerable phytotoxicity and halt metabolic and enzymatic activity they also promote growth

and development in limited quantity so that they have significant potential in revamping plant morphology and physiology under stressed conditions Hence optimum concentration management of these elements can help to mitigate world hunger and contribute toward sustainable agriculture and food security under challenging environments Volume 3 Sustainable Approaches for Enhancing Environmental Stress Tolerance focuses on the agronomic and biochemical approaches as well as biotechnological and high throughput technologies including the prospects of genetic engineering epigenetics and the latest CRISPR Cas technology in generating stress tolerant plants The volume provides a clear roadmap for the implementation of techniques for improving abiotic stress tolerance in plants for better sustenance Managing Plant Genetic Diversity V. Ramanatha Rao,A. H. D. Brown,M. Jackson,2001-12-13 This book contains edited and revised papers from a conference on Science and Technology for Managing Plant Genetic Diversity in the 21st Century held in Malaysia in June 2000 organised by the International Plant Genetic Resources Institute IPGRI It includes keynote papers and some 40 additional ones covering ten themes The major scientific challenges to developing a global vision for the next century are identified and key research objectives are also discussed **Proceedings of the International Symposium on Seed Enhancement and Seedling Production Technology** Changhoo Chun,Daniel Ivan Leskovar,2008 **Applying population-based threshold models to quantify and improve seed quality attributes** Prof Kent J. Bradford,Dr Pedro Bello,2022-07-25 Achieving rapid and uniform stand establishment in crops requires a combination of high quality seeds and appropriate environmental conditions In particular temperature and soil moisture or water potential are the major factors influencing germination in the field In this chapter we focus on the application of population based threshold PBT models to characterize seed germination time courses and how environmental and technological inputs influence them Viewing seed quality as a product of the behavior of populations of individual seeds is critical for understanding the causes and consequences of poor performance Quantitatively characterizing seed population features enables their use in seed sorting and seed enhancement and provides phenotypes for use in research breeding conservation and restoration We believe that PBT models are essential tools to enable full utilization of new advances in seed technology to improve seed quality and enable successful stand establishment in agriculture or in natural settings **Multi-Institutional Distance Learning Course on the Ex Situ Conservation of Plant Genetic Resources** , The Encyclopedia of Seeds J. Derek Bewley,Michael Black,Peter Halmer,2006 This is the first scholarly reference work to cover all the major scientific themes and facets of the subject of seeds It outlines the latest fundamental biological knowledge about seeds together with the principles of agricultural seed processing storage and sowing the food and industrial uses of seeds and the roles of seeds in history economies and cultures With contributions from 110 expert authors worldwide the editors have created 560 authoritative articles illustrated with plentiful tables figures black and white and color photographs suggested further reading matter and 670 supplementary definitions The contents are alphabetically arranged and cross referenced to connect related entries *Mineral Biofortification in Crop Plants for*

Ensuring Food Security Mirza Hasanuzzaman, Muhammad Suleman Tahir, Mohsin Tanveer, Adnan Noor Shah, 2023-12-03 This book provides a comprehensive summary of the recent advances in the biofortification of plants under climate change and how it affects food security globally. The need for mineral biofortification to eradicate or alleviate malnutrition through sustainable agriculture is also discussed. Biofortification of edible plants is considered the most appropriate approach to alleviate nutritional problems and nutrient deficiencies. In contrast, biofortification focuses on improving the nutritional content of the region's current agricultural biodiversity while preserving its habits and customs. Emphasis is also placed on recent advances and developments in omics, particularly metabolomics and related techniques to unravel the potential alterations in plants caused by biofortification. The book brings together eminent scientists to present the latest developments in the field. This timely publication addresses practical scenarios of bio-fortified food production and climate change. The book focuses on the methods, techniques, and environmental changes used to enhance and improve agricultural products. This book is one of the first to provide information on the use of modern biotechnologies to modify crops for health benefits. It also examines the mechanisms of the plant responses to genetically induced biofortification, the production and responses of fortified plants under climate change, and their effects on food security. The book will be useful for students and researchers, especially crop scientists, environmental scientists, biotechnologists, botanists, and agronomists, to understand the techniques and mechanisms of biofortification and responses of biofortified plants under climate change.
