Kasimzade, Erdal Şafak, Carlos E. Ventura, Farzad Naeim, Yoichi Mukai, 2018-08-13 This book features chapters based on selected presentations from the International Congress on Advanced Earthquake Resistance of Structures AERS2016 held in Samsun Turkey from 24 to 28 October 2016 It covers the latest advances in three widely popular research areas in Earthquake Engineering Performance Based Seismic Design Seismic Isolation Systems and Structural Health Monitoring The book shows the vulnerability of high rise and seismically isolated buildings to long periods of strong ground motions and proposes new passive and semi active structural seismic isolation systems to protect against such effects These systems are validated through real time hybrid tests on shaking tables Structural health monitoring systems provide rapid assessment of structural safety after an earthquake and allow preventive measures to be taken such as shutting down the elevators and gas lines before damage occurs Using the vibration data from instrumented tall buildings the book demonstrates that large distant earthquakes and surface waves which are not accounted for in most attenuation equations can cause long duration shaking and damage in tall buildings The overview of the current performance based design methodologies includes discussions on the design of tall buildings and the reasons common prescriptive code provisions are not sufficient to address the requirements of tall building design In addition the book explains the modelling and acceptance criteria associated with various performance based design guidelines and discusses issues such as selection and scaling of ground motion records soil foundation structure interaction and seismic instrumentation and peer review needs The book is of interest to a wide range of professionals in earthquake engineering including designers researchers and graduate students Volcanism and Subduction John Eichelberger, Evgenii Gordeev, Pavel Izbekov, Minoru Kasahara, Jonathan Lees, 2013-05-02 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 172 The Kamchatka Peninsula and contiguous North Pacific Rim is among the most active regions in the world Kamchatka itself contains 29 active volcanoes 4 now in a state of semi continuous eruption and I has experienced 14 magnitude 7 or greater earthquakes since accurate recording began in 1962 At its heart is the uniquely acute subduction cusp where the Kamchatka and Aleutian Arcs and Emperor Seamount Chain meet Volcanism and Subduction covers coupled magmatism and tectonics in this spectacular region where the torn North Pacific slab dives into hot mantle Senior Russian and American authors grapple with the dynamics of the cusp with perspectives from the west and

east of it respectively while careful tephrostratigraphy yields a remarkably precise record of behavior of storied volcanoes such as Kliuchevskoi and Shiveluch Towards the south Japanese researchers elucidate subduction earthquake processes with unprecedented geodetic resolution Looking eastward new insights on caldera formation monitoring and magma ascent are presented for the Aleutians This is one of the first books of its kind printed in the English language Students and scientists beginning research in the region will find in this book a useful context and introduction to the region s scientific leaders Others who wish to apply lessons learned in the North Pacific to their areas of interest will find the volume a valuable reference
