Pattern Recognition in Oil Exploration A. Sinvhal, 2012-12-06 The reasons for writing this book are very simple We use and teach computer aided techniques of mathematical simulation and of pattern recognition Life would be much simpler if we had a suitable text book with methods and computer programmes which we could keep referring to Therefore we have presented here material that is essential for mathematical modelling of some complex geological situations with which earth scientists are often confronted The reader is introduced not only to the essentials of computer modelling data analysis and pattern recognition but is also made familiar with the basic understanding with which they can plunge into when solving related and more complex problems This book first makes a case for seismic stratigraphy and then for pattern recognition Chapter 1 provides an extensive review of applications of pattern recognition methods in oil exploration Simulation procedures are presented with examples that are fairly simple to understand and easy to use on the computer Several geological situations can be formulated and simulated using the Monte Carlo method The binary lithologic sequences discussed in Chapter 2 consist of alternating layers of any two of sand shale and coal

Petroleum Exploration: A Quantitative Introduction Ray L. Sengbush, 2012-12-06 This book is about exploration for oil and gas and focuses particularly on seismic exploration in the hunt for hydrocarbons The first part The Hunt for Hydrocarbons gives general background information with an introductory chapter on the beginnings of the oil business followed by three chapters that include elements of petroleum geology geophysical methods and drilling and logging The second part Seismic Exploration for Hydrocarbons consists of two chapters that describe rudiments of the seismic method and velocity measurements two chapters discussing theory based on wave propagation and the convolutional model and a chapter devoted to each of the three phases of seismic exploration acquisition processing and interpretation I have concentrated on seismic exploration because most of the oil and gas that has been found has been located by this method and it is the only method that has the potential for the increased precision needed in what Halbouty 1982 calls the deliberate search for the subtle trap In contrast to elementary and introductory books that present the seismic method superficially and qualitatively this book develops the method quantitatively using only elementary mathematics algebra and trigonometry so that readers should be able to do things afterwards that they couldn't do before and thereby get a deeper appreciation of the business of hunting for hydrocarbons The book also probes into some sophisticated topics that wouldn't be mentioned in short courses at a variety of levels

oil and gas refining of oil and processing of gas marketing of oil and gas the impact of oil and gas exploration production and revenues on the Nigerian environment politics and economy and a myriad of other issues are comprehensively covered The book should prove most useful to the lawyer petroleum geologist petroleum engineer policy makers investors local and international development agencies and bodies lecturers and students specialising in wide ranging subjects as economics development studies engineering management public administration insurance marketing accounting and finance

mathematical models for subsurface geology based on Monte Carlo and Markov chains It then guides the reader through various steps in pattern recognition viz identification and automatic extraction of attributes in the time and frequency domains from the seismic response of models The use of these attributes in pattern recognition is validated by interpreting seismic reflection data as a practical application area Appropriate computer programs have also been included in the text An important aspect of this book is that it links subsurface geology with pattern recognition The present work will be of interest to those working in the areas of seismic prospecting seismic zonation and strong motion modelling as well as to those who deal with data interpretation in other disciplines Deconvolution of Geophysical Time Series in the Exploration for Oil and Natural Gas M.T.
