experience both lived and observed of addiction today uncovering a core set of conceptual components and discursive tropes which are commonly associated with modern understandings of the phenomenon Having established a common set of tropes and features which distinguish modern Addiction Literature as a distinct literary mode it then considers premodern texts through this lens revealing similar patterns of conception and convention in a broad range of historical periods and literary genres from Aesop to Shakespeare

Accident Prone John Burnham, 2010-04-15 Technology demands uniformity from human beings who encounter it People encountering technology however differ from one another Thinkers in the early twentieth century observing the awful consequences of interactions between humans and machines death by automobiles or dismemberment by factory machinery for example developed the idea of accident proneness the tendency of a particular person to have more accidents than most people In tracing this concept from its birth to its disappearance at the end of the twentieth century Accident Prone offers a unique history of technology focused not on innovations but on their unintended consequences Here John C Burnham shows that as the machine era progressed the physical and economic impact of accidents coevolved with the rise of the insurance industry and trends in twentieth century psychology After World War I psychologists determined that some people are more accident prone than others This designation signaled a shift in social strategy toward minimizing accidents by diverting particular people away from dangerous environments By the 1960s and 1970s however the idea of accident proneness gradually declined and engineers developed new technologies to protect all people thereby introducing a hidden but radical egalitarianism Lying at the intersection of the history of technology the history of medicine and psychology and environmental history Accident Prone is an ambitious intellectual analysis of the birth growth and decline of an idea that will interest anyone who wishes to understand how Western societies have grappled with the human costs of modern life

A Cultural History of the Emotions in the Medieval Age Juanita Ruys,Clare Monagle,2020-08-20 Our period opens at the end of the Roman Empire when intellectual currents are indebted to the Greek philosophical inheritance of Plato and Aristotle as well as to a Romanized Stoicism Into this mix entered the new and from 313CE imperially sanctioned religion of Christianity In art literature music and drama we find an increasing emphasis on the arousal of individual emotions and their acceptance as a means towards devotion In religion we see a move from the ascetic regulation of emotions to the affective piety of the later medieval period that valued the believer s identification with the Passion of Christ and the sorrow of Mary In science and medicine the nature and causes of emotions their role in constituting the human person and their impact on the same became a subject of academic inquiry Emotions also played an increasingly important public role evidenced in populace wide events such as conversion and the strategies of rulership Between 350 and 1300 emotions were transformed from something to be transcended into a location for meditation upon what it means to be human

From Physick to Pharmacology Louise Hill Curth, 2017-05-15

From Physick to Pharmacology addresses the important albeit neglected history of the distribution and sale of medicinal drugs in England from the sixteenth to the twenty-first century. The social history of early medicine and the evolution of British retailing are two areas that have attracted considerable attention from academics in recent years. That said, little work has been done either by medical or business historians on the actual retailing of drugs. This book merges the two themes by examining the growth in the retailing of medicinal drugs since late medieval times. The six academics contributing essays include both medical and business historians who provide an informed and stimulating perspective on the subject. After an introduction setting out the context of drug retailing and surveying the current literature, the volume is arranged in a broadly chronological order beginning with Patrick Wallis's study of apothecaries and other medical retailers in early modern London. The next chapter by Louise Hill Curth looks at the way the distribution network expanded to encompass a range of other retail outlets to sell new branded pre-packaged proprietary drugs. Steven King then examines various other ways in which medicines were sold in the eighteenth century with a focus on itinerant traders. This is followed by pieces from Hilary Marland on the rise of chemists and druggists in the nineteenth century and Stuart Anderson on twentieth-century community pharmacists. The final essay by Judy Slinn examines the marketing and consumption of prescription drugs from the middle of that century until the present day. Taken together, these essays provide a fascinating insight into the changes and continuities of five centuries of drug retailing in England.
