 Alaia, Kristofer J. Jones, 2022-06-02 Anterior cruciate ligament reconstruction is one of the most common procedures
 performed in sports medicine centers However these procedures can carry a long term failure rate as high as 5 15% and
 when these procedures fail revision is significantly more complex Considerable factors need to be assessed in patients that
 are indicated for surgery as revisions carry a higher failure rate and potentially less optimal outcomes and return to sport
 and activity These factors include but are not limited to the status of the meniscus overall alignment graft options placement
 of prior implants or tunnels collateral ligament quality and whether or not the revision must be staged into two procedures
 This text provides a comprehensive case based presentation of the most efficient and practical treatment algorithms for
 patients in need of revision ACL repair and reconstruction Opening chapters discuss the initial patient work up radiography
 surgical indications graft options and pre operative considerations and preparations The main portion of the book then
 describes both common factors leading to revision surgery as well as the surgical techniques themselves illustrated via
 plentiful operative photos and vivid clinical case material The management of osteolysis ligamentous laxity extra articular
 tenodesis plane correction and meniscus deficiency among others are discussed in detail Special populations such as the
 pediatric patient the elite athlete and the female athlete are discussed as well Shedding light on this challenging surgical
