Low-Temperature Chemistry of the Atmosphere Geert K. Moortgat, Austin J. Barnes, Georges Le Bras, John R. Sodeau, 2013-06-29 Presented here are authoritative and up to date assessments of the homogenous and heterogenous chemical and physical processes occurring in the troposphere and stratosphere especially during the ozone hole event The book begins with an overview of atmospheric chemistry followed by reviews of relevant homogenous reactions in the gas phase and the microphysics and physical chemistry of heterogenous processes that occur on or in aerosols rain and ice Low temperature laboratory studies are compared with related fieldwork measurements particularly in relation to the formation and composition of polar stratospheric clouds Also discussed are measurements in glacial ice Finally chemical modelling of the troposphere and stratosphere including heterogenous processes is reviewed *Chemistry of the Upper and Lower Atmosphere* Barbara J. Finlayson-Pitts, James N. Pitts Jr., 1999-11-17 Here is the most comprehensive and up to date treatment of one of the hottest areas of chemical research The treatment of fundamental kinetics and photochemistry will be highly useful to chemistry students and their instructors at the graduate level as well as postdoctoral fellows entering this new exciting and well funded field with a Ph D in a related discipline e g analytical organic or physical chemistry chemical physics etc *Chemistry of the Upper and Lower Atmosphere* provides postgraduate researchers and teachers with a uniquely detailed comprehensive and authoritative resource The text bridges the gap between the fundamental chemistry of the earth s atmosphere and real world examples of its application to the development of sound scientific risk assessments and associated risk management control strategies for both tropospheric and stratospheric pollutants Serves as a graduate textbook and must have reference for all atmospheric scientists Provides more than 5000 references to the literature through the end of 1998 Presents tables of new actinic flux data for the troposphere and stratosphere 0 40km Summarizes kinetic and photochemical data for the troposphere and stratosphere Features problems at the end of most chapters to enhance the book s use in teaching Includes applications of the OZIPR box model with comprehensive chemistry for student use [Annales Geophysicae](#), 1995 **Paul J. Crutzen: A Pioneer on Atmospheric Chemistry and Climate Change in the Anthropocene** Paul J. Crutzen, Hans Günter Brauch, 2016-04-15 This open access book contains texts by the Nobel laureate Paul J Crutzen who is best known for his research on ozone depletion It comprises Crutzen s autobiography several pictures documenting important stages of his life and his most important scientific publications The Dutch atmospheric chemist is one of the world s most cited scientists in geosciences His political engagement makes him a tireless ambassador for environmental issues such as climate change He popularized the term Anthropocene for the current geological era acknowledging the enduring influence of humankind on planet Earth This concept conceives humans to be a geologic factor influencing the evolution of our globe and the living beings populating it The selection of texts is representing Paul Crutzen s scientific oeuvre as his research interests span from ozone depletion to the climatic impacts of biomass burning the

consequences of a worldwide atomic war the Nuclear Winter to geoengineering and the Anthropocene This book is available open access under a Creative Commons Attribution 4.0 International License via link [springer.com](https://www.springer.com)

Climate Change 2001: The Scientific Basis J. T. Houghton, Y. Ding, D. J. Griggs, M. Noguer, P. J. van der Linden, X. Dai, K. Maskell, C. A. Johnson, 2001-07-12 Climate Change 2001 The Scientific Basis is the most comprehensive and up to date scientific assessment of past present and future climate change The report Analyses an enormous body of observations of all parts of the climate system Catalogues increasing concentrations of atmospheric greenhouse gases Assesses our understanding of the processes and feedbacks which govern the climate system Projects scenarios of future climate change using a wide range of models of future emissions of greenhouse gases and aerosols Makes a detailed study of whether a human influence on climate can be identified Suggests gaps in information and understanding that remain in our knowledge of climate change and how these might be addressed This latest IPCC assessment will again form the standard scientific reference for all concerned with climate change and its consequences including students and researchers in all aspects of environmental and atmospheric science and policymakers in governments and industry worldwide *The British National Bibliography* Arthur James Wells, 1995

Chemical Exchange Between the Atmosphere and Polar Snow Eric W. Wolff, Roger C. Bales, 2013-06-29 Polar ice cores have provided tremendous advances in our knowledge of past climate change They also contain an archive of geochemical data which can certainly delineate some of the forcing factors that govern climate change However our ability to interpret these data is severely curtailed by lack of knowledge of the processes governing the transfer of chemical species from the air to the snow This book outlines the potential and problems of ice core chemistry and discusses the processes involved in air snow transfer It gives the state of current knowledge and an agenda for future research

[Atmospheric Ozone as a Climate Gas](#) Wei-Chyung Wang, Ivar S. Isaksen, 2013-06-29 One of the major findings in the 1992 IPCC report and the 1994 World Meteorological Organization's Ozone Assessment report was the identification of possible climatic effects over the last few decades resulting from anthropogenically induced changes in atmospheric ozone The initial quantitative estimates of their direct climatic effects indicate significant impacts though large uncertainties exist and studies using general circulation models are needed A point that needs to be addressed in particular is that atmospheric ozone differs from greenhouse gases in that it is formed and destroyed by chemical processes in the atmosphere due to interaction involving a large number of source gases e.g. H₂O, NO, CO₂, NMHC, N₂O, CH₄ and the CFCs Therefore the indirect effect of climate chemistry interaction involving atmospheric ozone is an important aspect for consideration in general circulation models During the last few years there have been several international workshops

related to atmospheric ozone In 1987 a NATO workshop on atmospheric ozone was held in Lillehammer Norway More recently two workshops were organized to discuss the topic General Circulation Model Study of Climate Chemistry Interaction The first was held August 19 21 1992 in Oslo Norway and the second held May 26 27 1993 in Albany New York USA The two workshops were IAMAP activities under the Trace Constituent Working Group Decade-to-Century-Scale Climate Variability and Change National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Panel on Climate Variability on Decade-to-Century Time Scales, 1998-11-24 Society today may be more vulnerable to global scale long term climate change than ever before Even without any human influence past records show that climate can be expected to continue to undergo considerable change over decades to centuries Measures for adaption and mitigation will call for policy decisions based on a sound scientific foundation Better understanding and prediction of climate variations can be achieved most efficiently through a nationally recognized dec cen science plan This book articulates the scientific issues that must be addressed to advance us efficiently toward that understanding and outlines the data collection and modeling needed *Books in Print* ,1991 **Road from Kyoto** United States. Congress. House. Committee on Science, 1999 *Regional Satellite Oceanography* Serge Victorov, 2003-09-02 This work addresses the whole range of problems relating to the application of satellite technology to studies of regional seas and sea phenomena the Gulf Stream the Kuroshia Current and coastal zones It argues that to emphasize global applications is to fail to take into account fundamental idiosyncracies specific to the regional perspective In addition it describes implementation techniques data gathering in situ data assurance algorithms for parameter retrieval data storage and data output The book contains satellite imagery and incorporates case studies from areas such as the Baltic and the Black Sea *Books in Print Supplement* ,1994 Road from Kyoto: Kyoto and the administration's fiscal year 1999 budget request United States.
