Space Research M. J. Rycroft, 2013-10-22 COSPAR Space Research Volume 20 covers the proceedings of the open meetings of the Working Groups on Physical Sciences of the 22nd Plenary Meeting of COSPAR in Bangalore India on May 29 June 9 1979 This volume is organized into four parts encompassing 50 chapters that review significant advances in space research concerning the Earth's atmosphere and plasma envelope as well as in the planetary science and astronomy fields Part I describes the unique properties of the different layers of the Earth's neutral atmosphere including the troposphere stratosphere and mesosphere This part also deals with the measurements of atmospheric radiation the application of remote sensing by satellites to radiation climatology the structure and circulation of the stratosphere and mesosphere and the theory and application of thermospheric models Part II highlights the research studies concerning the chemistry and energetic charged particle effect in the ionosphere This part also examines the in situ measurements of equatorial ionosphere and the distribution of singly ionized helium through backscatter observations Part III contains surveys associated with some planetary components such as the comets moon and Venus This part specifically discusses the data obtained from different probes models and analytical techniques to study these components Part IV explores research works on the sun cosmic ray and infrared and gamma ray astronomy This book is intended primarily to astronomers and space scientists and researchers *Understanding the Universe* Richard M. West, 2012-12-06 There is hardly any field of human endeavour which is more fundamental than the study of our surroundings We have always wanted to learn what was behind our horizon beyond the next mountain on the other side of the ocean on the next planet at the end of the Universe We have come a long way since our early ancestors gazed upon the sky in amazement Giant optical and radio telescopes now allow us to see the early epochs of the Universe revealing phenomena beyond our comprehension Spacecrafts with on board astronomical instrumentation circle the Earth and fly to the limits of the Solar System providing invaluable new information

about nearby and distant objects Many people have the intuitive feeling that it is easier and better to study the Universe from above the Earth's atmosphere However this is only partially true in as much as electromagnetic radiation of certain wavelengths e.g X rays does not penetrate the atmosphere and can only be studied from balloons and space crafts The advent of space borne astronomy has not made ground based observations obsolete on the contrary it is only thanks to the combination of the two that we have now a vastly more comprehensive picture of the Universe than just a few decades ago

Balogh,Thomas E.
