The Evolution of Human Populations in Arabia Michael D. Petraglia,Jeffrey I. Rose,2009-11-27 The romantic landscapes and exotic cultures of Arabia have long captured the interests of both academics and the general public alike The wide array and incredible variety of environments found across the Arabian peninsula are truly dramatic tropical coastal plains are found bordering up against barren sandy deserts high mountain plateaus are deeply incised by ancient river courses As the birthplace of Islam the recent history of the region is well documented and thoroughly studied However legendary explorers such as T E Lawrence Wilfred Thesiger and St John Philby discovered hints of a much deeper past during their travels across the subcontinent Drawn to Arabia by the magnificent solitude of its vast sand seas these intrepid adventurers learned from the Bedouin how to penetrate its deserts and returned with stirring accounts of lost civilizations among the wind swept dunes We now know that prior to recorded history Arabia housed countless peoples living a variety of lifestyles including some of the world s earliest pastoralists communities of incipient farmers fishermen dubbed the Ichthyophagi by ancient Greek geographers and Paleolithic big game hunters who were among the first humans to depart their ancestral homeland in Africa In fact some archaeological investigations indicate that Arabia was inhabited by early hominins extending far back into the Early Pleistocene perhaps even into the Late Pliocene *Crossing the Human Threshold* Matt Pope,John McNabb,Clive Gamble,2017-11-22 When was the human threshold crossed What is the evidence for evolving humans and their emerging humanity This volume explores in a global overview the archaeology of the Middle Pleistocene 800 000 to 130 000 years ago when evidence for innovative cultural

behaviour appeared The evidence shows that the threshold was crossed slowly by a variety of human ancestors and was not confined to one part of the Old World Crossing the Human Threshold examines the changing evidence during this period for the use of place landscape and technology It focuses on the emergence of persistent places and associated developments in tool use hunting strategies and the control of fire represented across the Old World by deeply stratified cave sites These include the most important sites for the archaeology of human origins in the Levant South Africa Asia and Europe presented here as evidence for innovation in landscape thinking during the Middle Pleistocene The volume also examines persistence at open locales through a cutting edge review of the archaeology of Northern France and England Crossing the Human Threshold is for the worldwide community of students and researchers studying early hominins and human evolution It presents new archaeological data It frames the evidence within current debates to understand the differences and similarities between ourselves and our ancient ancestors

Human Origins: The old stone age and the dawn of man and his arts George Grant MacCurdy, 1924 **Experimental Determination of Stone Tool Uses** Lawrence H. Keeley, 1980-03-15 A major problem confronting archeologists is how to determine the function of ancient stone tools In this important work Lawrence H Keeley reports on his own highly successful course of research into the uses of British Paleolithic flint implements His principal method of investigation known as microwear analysis was the microscopic examination of traces of use left on flint implements in the form of polishes striations and breakage patterns The most important discovery arising from Keeley s research was that at magnifications of 100x to 400x there was a high correlation between the detailed appearance of microwear polishes formed on tool edges and the general category of material worked by that edge For example different and distinctive types of microwear polish were formed during use on wood bone hide meat and soft plant material These correlations between microwear polish and worked material were independent of the method of use cutting sawing scraping and so on In combining evidence of polish type with other traces of use Keeley was able to make precise reconstructions of tool functions This book includes the results of a blind test of Keeley s functional interpretations which revealed remarkable agreement between the actual and inferred use of the tools tested Keeley applied his method of microwear analysis to artifacts from three excavation sites in Britain Clacton on the sea Swanscombe and Hoxne His research suggests new hypotheses concerning such Paleolithic problems as inter assemblage variability the function of Acheulean hand axes sidescrapers and chopper cores and points the way to future research in Stone Age studies
