Carbonate Depositional Environments

Peter A. Scholle, Don G. Bebout, Clyde

H. Moore, 1983 This is the book you need to improve your interpretations of carbonates Using a systematic treatment of the entire subject of carbonate depositional environments this unique book is specifically designed for use by the non specialist the petroleum geologist or field geologist who uses carbonate depositional environments in facies reconstructions and environmental interpretations This classic work covering settings from non marine to deep water focuses on the recognition of depositional environments with extensive use of color diagrams and photographs of sedimentary structures and facies assemblages Although the ultimate purpose of this text is to improve exploration for oil and gas and mineral deposits it also includes environments not normally considered to be particularly prospective for oil and gas in an attempt to provide as complete a framework as possible for recognition of environments Suitable for use as a textbook this book is also an invaluable reference for the specialist or advanced graduate student It provides perspective on large scale influences on carbonate depositional environments such as tectonic patterns fluctuations of sea level variations of climate and evolutionary patterns of organisms

Carbonate Platforms and Reservoirs J. Hendry, P. Burgess, D. Hunt, X. Janson, V. Zampetti, 2021-08-17 Modern seismic data have become an essential toolkit for studying carbonate platforms and reservoirs in impressive detail Whilst driven primarily by oil and gas exploration and development data sharing and collaboration are delivering fundamental geological knowledge on carbonate systems revealing platform geomorphologies and how their evolution on millennial time scales as well as kilometric length scales was forced by long term eustatic oceanographic or tectonic factors Quantitative interrogation of modern seismic attributes in carbonate reservoirs permits flow units and barriers arising from depositional and diagenetic processes to be imaged and extrapolated between wells This volume reviews the variety of carbonate platform and reservoir characteristics that can be interpreted from modern seismic data illustrating the benefits of creative interaction between geophysical and carbonate geological experts at all stages of a seismic campaign Papers cover carbonate exploration including the uniquely challenging South Atlantic pre salt reservoirs seismic modelling of carbonates and seismic indicators of fluid flow and diagenesis

Sedimentary Environments Offshore Norway-Palaeozoic to Recent O.J. Martinsen, T.

Dreyer, 2001-06-06 Required reading for geologists working in the offshore areas Volume 10 continues the series from the Norwegian Petroleum Society This work provides an up to date review of the late Palaeozoic to present sedimentary history of the Norwegian offshore areas in the North Sea and Mid Norway basins Case studies overview articles and analogue examples from adjacent areas such as Greenland and Denmark present new ideas on the development of the Norwegian margin from the Carboniferous through the Mesozoic and Cenozoic In particular new evidence and interpretations are presented on well known major reservoir bearing successions such as the Statfjord Formation and Dunlin Group in the Northern North Sea and the re and the Tilje Formations in the Mid Norway area Furthermore the Upper Jurassic succession in the Haltenbanken area is described giving new evidence on the interplay between extensional tectonics and sedimentation during the second major rift phase in the area The Cretaceous and Cenozoic periods are treated extensively showing their importance as overall deep water sedimentary systems with proven and potential reservoir rocks such as in the Ormen Lange Field and for causing burial of Jurassic rocks to advantageous depths for hydrocarbon generation The Recent sedimentary history of the Norwegian margin is treated with examples of the glacial history and giant submarine slides which understanding is vital for the placement of offshore installations The book is organised based on geologic time from Palaeozoic through Mesozoic to Cenozoic examples It includes a set of palaeogeographic maps from the Carboniferous through to the Cenozoic In addition there are numerous examples of core photographs well log data correlation panels and seismic as well as outcrop photographs and logs from the analogue examples Comprehensive reference and keyword lists are also included

Masters Theses in the Pure and Applied Sciences Wade H. Shafer, 2012-12-06 Masters Theses in the Pure and Applied Sciences was first conceived published and disseminated by the Center for Information and Numerical Data Analysis and Synthesis CINDAS at Purdue University in 1957 starting its coverage of theses with the academic year 1955 Beginning with Volume 13 the printing and dissemination phases of the activity were transferred to University Microfilms Xerox of Ann Arbor Michigan with the thought that such an arrangement would be more beneficial to the academic and general scientific and technical community After five years of this joint undertaking we had concluded that it was in the interest of all concerned if the printing and distribution of the volumes were handled by an international publishing house to assure improved service and broader dissemination Hence starting with Volume 18 Masters Theses in the Pure and Applied Sciences has been disseminated on a worldwide basis by Plenum Publishing Corporation of New York and in the same year the coverage was broadened to include Canadian universities All back issues can also be ordered from Plenum We have reported in Volume 34 thesis year 1989 a total of 13 377 theses titles from 26 Canadian and 184 United States universities We are sure that this broader base for these titles reported will greatly enhance the value of this important annual reference work While Volume 34 reports theses submitted in 1989 on occasion certain universities do report theses submitted in
