Dominique Michelet,Philippe Nondédéo,2019-09-16T00:00:00+02:00 The statuses layouts and functions of the major Lowlands Maya sites from the earliest ones around 700 BC until the most recent were the object of numerous debates many of them false because they were generated by the inadequate use of the terms urban and urbanism The numerous works carried out since the 1960s in order to establish the plans of numerous cities and sometimes their surroundings clearly demonstrated the extraordinary variability of the forms and functions of these settlements The new data provided by airborne LiDAR surveys confirm the diversity of the city planning Among their main results we must note the questioning of the differentiation between the core of cities and the so called rural sectors It also appears more evidently than ever that many Maya sites including important ones are disperse very often due to the presence of agricultural plots of land between the residential groups Thus green cities would be one model among others to consider for ancient Maya cities *The Maya and Their Central American Neighbors* Geoffrey E Braswell,2014-04-16 The ancient Maya created one of the most studied and best known civilizations of the Americas Nevertheless Maya civilization is often considered either within a vacuum by sub region and according to modern political borders or with reference to the most important urban civilizations of central Mexico Seldom if ever are the Maya and their Central American neighbors of El Salvador and Honduras considered together despite the fact that they engaged in mutually beneficial trade intermarried and sometimes made war on each other The Maya and Their Central American Neighbors seeks to fill this lacuna by presenting original research on the archaeology of the whole of the Maya area from Yucatan to the Maya highlands of Guatemala western Honduras and El Salvador With a focus on settlement pattern analyses architectural studies and ceramic analyses this ground breaking book provides a broad view of this important relationship allowing readers to understand ancient perceptions about the natural and built environment the role of power the construction of historical narrative trade and exchange multiethnic interaction in pluralistic frontier zones the origins of settled agricultural life and the nature of systemic collapse **Conditions for the**

Maya Polities of the Southern Lowlands Damien B. Marken,James L. Fitzsimmons,2015-11-21 *Classic Maya Polities of the Southern Lowlands* investigates Maya political and social structure in the southern lowlands assessing comparing and interpreting the wide variation in Classic period Maya polity and city composition development and integration Traditionally

discussions of Classic Maya political organization have been dominated by the debate over whether Maya polities were centralized or decentralized. With new largely unpublished data from several recent archaeological projects, this book examines the premises, strengths, and weaknesses of these two perspectives before moving beyond this long-standing debate and into different territory. The volume examines the articulations of the various social and spatial components of Maya polity, the relationships, strategies, and practices that bound households, communities, institutions, and dynasties into enduring or short-lived political entities. By emphasizing the internal negotiation of polity, the contributions provide an important foundation for a more holistic understanding of how political organization functioned in the Classic period. Contributors include Francisco Estrada Belli, James L. Fitzsimmons, Sarah E. Jackson, Caleb Kestle, Brigitte Kovacevich, Allan Maca, Damien B. Marken, James Meierhoff, Timothy Murtha, Cynthia Robin, Alexandre Tokovinine, and Andrew Wyatt.

Ancient Maya Arthur Demarest, 2004-12-09 In this new archaeological study, Arthur Demarest brings the lost pre-Columbian civilization of the Maya to life. In applying a holistic perspective to the most recent evidence from archaeology, paleoecology, and epigraphy, this theoretical interpretation emphasises both the brilliant rain forest adaptations of the ancient Maya and the Native American spirituality that permeated all aspects of their daily life. Demarest draws on his own discoveries and the findings of colleagues to reconstruct the complex lifeways and volatile political history of the Classic Maya states of the first to eighth centuries. He provides a new explanation of the long-standing mystery of the ninth-century abandonment of most of the great rain forest cities. Finally, he draws lessons from the history of the Classic Maya cities for contemporary society and for the ongoing struggles and resurgence of the modern Maya peoples who are now re-emerging from six centuries of oppression.

Once Beneath The Forest Bl Turner II, 2019-06-04 My interest in ancient Maya agriculture began late in the year of 1971 when William M. Denevan encouraged me to pursue the topic. Our interests had been perked by reports from Joseph W. Ball, Jack Eaton, and Irwin Rovner of the presence of terrace-like features throughout the Rio Bec region of the southern Yucatán Peninsula. Denevan maintained a long-term interest in pre-Hispanic agriculture and population in the New World. Our studies with the emerging Rio Bec research group at the University of Wisconsin led to the conclusion that the then dominant themes of Maya agriculture were in need of reevaluation and that a number of remains of intensive forms of agriculture were likely to be found in the Central Maya lowlands of Mexico, Peten, Guatemala, and Belize, particularly wetland or raised fields in addition to the reported terraces. Our interests were heightened at this time by notification from Alfred Siemens of the finds of wetland fields in the vicinity of the Rio Bec region in the Chetumal, Mexico northern Belize area.
