1 Introduction

Let \mathcal{Q}^n be a subset of \mathcal{K}^n , the set of convex bodies in \mathbb{R}^n , and let \mathcal{A} be an abelian semigroup. A function $\Phi: \mathcal{Q}^n \rightarrow \langle \mathcal{A}, + \rangle$ is called a *valuation* if

$$\Phi(K \cup L) + \Phi(K \cap L) = \Phi(K) + \Phi(L) \quad (1.1)$$

for all $K, L \in \mathcal{Q}^n$ with $K \cup L, K \cap L \in \mathcal{Q}^n$. Valuations on convex bodies are a classical concept going back to Dehn's solution in 1900 of Hilbert's Third Problem. Probably the most famous result on valuations is Hadwiger's classification theorem of continuous rigid motion invariant valuations [19]. For detailed information and a historical account on valuations on convex bodies, see [10, 21, 45]. See also [1–3, 11–17, 20, 23–32, 41, 42] for some of the for more recent contributions.

Let K be a compact starshaped subset in \mathbb{R}^n . Its Minkowski functional $\|\cdot\|_K$ is defined by

Symplectic Methods in Harmonic Analysis and in Mathematical Physics Maurice A. de Gosson, 2011-07-30 The aim of this book is to give a rigorous and complete treatment of various topics from harmonic analysis with a strong emphasis on symplectic invariance properties which are often ignored or underestimated in the time frequency literature The topics that are addressed include but are not limited to the theory of the Wigner transform the uncertainty principle from the point of view of symplectic topology Weyl calculus and its symplectic covariance Shubin s global theory of pseudo differential operators and Feichtinger s theory of modulation spaces Several applications to time frequency analysis and quantum mechanics are given many of them concurrent with ongoing research For instance a non standard pseudo differential calculus on phase space where the main role is played by Bopp operators also called Landau operators in the literature is introduced and studied This calculus is closely related to both the Landau problem and to the deformation quantization theory of Flato and Sternheimer of which it gives a simple pseudo differential formulation where Feichtinger s modulation spaces are key actors This book is primarily directed towards students or researchers in harmonic analysis in the broad sense and towards

mathematical physicists working in quantum mechanics It can also be read with profit by researchers in time frequency analysis providing a valuable complement to the existing literature on the topic A certain familiarity with Fourier analysis in the broad sense and introductory functional analysis e g the elementary theory of distributions is assumed Otherwise the book is largely self contained and includes an extensive list of references **Pseudo-Differential Operators and Related Topics** Vishvesh Kumar, David Rottensteiner, Michael Ruzhansky, 2025-01-28 The current volume gives an update on recent developments in the theory of pseudo differential operators and related topics The results collected here were presented at the Pseudo Differential Operators and Related Topics PSORT 2024 Conference at Ghent University Belgium and cover a wide range of topics in pseudo differential operators microlocal analysis time frequency analysis and related applications **Lie Theory** Jean-Philippe Anker, Bent Orsted, 2006-02-25 Semisimple Lie groups and their algebraic analogues over fields other than the reals are of fundamental importance in geometry analysis and mathematical physics Three independent self contained volumes under the general title of Lie Theory feature survey work and original results by well established researchers in key areas of semisimple Lie theory Harmonic Analysis on Symmetric Spaces General Plancherel Theorems presents extensive surveys by E P van den Ban H Schlichtkrull and P Delorme of the spectacular progress over the past decade in deriving the Plancherel theorem on reductive symmetric spaces Well suited for both graduate students and researchers in semisimple Lie theory and neighboring fields possibly even mathematical cosmology it provides a broad clearly focused examination of semisimple Lie groups and their integral importance and applications to research in many branches of mathematics and physics Knowledge of basic representation theory of Lie groups as well as familiarity with semisimple Lie groups symmetric spaces and parabolic subgroups is required **Harmonic Analysis and Number Theory** Carl Herz, Stephen William Drury, Maruti Ram Murty, 1997 This volume presents the proceedings of a conference on Harmonic Analysis and Number Theory held at McGill University Montreal in April 1996 The papers are dedicated to the memory of Carl Herz who had deep interests in both harmonic analysis and number theory These two disciplines have a symbiotic relationship that is reflected in the papers in this book **Geometric Harmonic Analysis V** Dorina Mitrea, Irina Mitrea, Marius Mitrea, 2023-08-22 This monograph presents a comprehensive self contained and novel approach to the Divergence Theorem through five progressive volumes Its ultimate aim is to develop tools in Real and Harmonic Analysis of geometric measure theoretic flavor capable of treating a broad spectrum of boundary value problems formulated in rather general geometric and analytic settings The text is intended for researchers graduate students and industry professionals interested in applications of harmonic analysis and geometric measure theory to complex analysis scattering and partial differential equations The ultimate goal in Volume V is to prove well posedness and Fredholm solvability results concerning boundary value problems for elliptic second order homogeneous constant complex coefficient systems and domains of a rather general geometric nature The formulation of the boundary value problems treated here is optimal from a multitude of
