*OPTIKA '98* Gábor Lupkovics, András Podmaniczky, 1998 A collection of papers from the 5th Congress on Modern Optics They are divided into nine sessions which include lasers and related devices nonlinear optics materials processing and optical information processing      **Lasers** Charles Blain, 2002 Developments in lasers continue to enable progress in many areas such as eye surgery the recording industry and dozens of others This book presents citations from the book literature for the last 25 years and groups them for ease of access which is also provided by subject author and titles indexes      Official Summary of Security Transactions and Holdings Reported to the Securities and Exchange Commission Under the Securities Exchange Act of 1934 and the Public Utility Holding Company Act of 1935 ,1999      Soviet Researches on Luminescence D. V. Skobel tsyn, 2013-11-11 It is well known that luminescence is the term used to describe the excess radiation from a body over and above the thermal radiation and persisting for a time which greatly exceeds the period of a light vibration The first half of this definition proposed by Wiedemann distinguishes luminescence from equilibrium thermal radiation the second half introduced by Vavilov distinguishes luminescence from various forms of scattering and from induced radiation such as Vavilov Cherenkov radiation etc Distinctions are made between photo cathodo x ray and other forms of luminescence depending on how energy is introduced into the luminescent body Electroluminescence is the name given to that form of fluorescence in which the radiating body receives energy directly from an electric field It should be noted that luminescence under the influence of cathode rays is not called electroluminescence because in this case the necessary energy is not supplied directly from the electric field to the radiating body but by means of extraneous electrons Electroluminescence of gaseous bodies radiation from a gas discharge has been known for a long time and is widely used in luminescent lamps and gas discharge tubes In 1923 Losev 1J observed radiation from silicon carbide crystals when a voltage was applied to them directly      **Official Summary of Security Transactions and Holdings** United States.
