**Soft Computing for Problem Solving** Jagdish Chand Bansal, Kedar Nath Das, Atulya Nagar, Kusum Deep, Akshay Kumar Ojha, 2018-10-30 This two volume book presents outcomes of the 7th International Conference on Soft Computing for Problem Solving SocProS 2017. This conference is a joint technical collaboration between the Soft Computing Research Society Liverpool Hope University UK, the Indian Institute of Technology Roorkee, the South Asian University New Delhi and the National Institute of Technology Silchar and brings together researchers, engineers and practitioners to discuss thought provoking developments and challenges in order to select potential future directions. The book presents the latest advances and innovations in the interdisciplinary areas of soft computing including original research papers in the areas including but not limited to algorithms, artificial immune systems, artificial neural networks, genetic algorithms, genetic programming and particle swarm optimization and applications, control systems, data mining and clustering, finance, weather forecasting, game theory, business and forecasting applications. It is a valuable resource for both young and experienced researchers dealing with complex and intricate real world problems for which finding a solution by traditional methods is a difficult task.

**Limiting Modes of Aircraft Flight** Alexander Nikolaevich Akimov, Vadim Vadimovich Vorobyov, Dmitry Alexandrovich Zatuchny, 2022-10-31 This book describes in detail a method of direct optimization which makes it possible to choose the best trajectory of an aircraft in conditions of its limited resource. This can happen in the event of an emergency on board associated with both a possible equipment failure and external influences, for example when lightning strikes an aircraft or collides with a moving object. The highlight of this book is the fact that the results presented in it can be applied universally to the choice of the flight path of large and small aircraft as well as helicopter technology. In addition, they take into account various conditions of aircraft flight including a possible accident. The methods and algorithms presented here can be used as the basis for the creation of automatic collision avoidance systems as well as the choice of the best aircraft trajectory for flights in different regions and in different conditions.

**Scientific and Technical Aerospace Reports**, 1994 *Control of Distributed Parameter Systems* 1982 Jean-Pierre Babary, Laurent Le Letty, 2014-05-16 *Control of Distributed Parameter Systems* 1982 covers the proceedings of the Third International Federation of Automatic Control (IFAC) Symposium on Control of Distributed Parameter Systems. The book reviews papers that tackle issues concerning the control of distributed parameter systems such as modeling, identification, estimation, stabilization, optimization and energy system. The topics that the book tackles include notes on optimal and estimation results of nonlinear systems, approximation of the parameter identification problem in distributed parameters systems and optimal control of a punctually located heat source. This text also encompasses the stabilization of nonlinear parabolic equations and the decoupling approach to the control of large spaceborne antenna systems. Stability of Hilbert space contraction semigroups and the tracking problem in the fractional representation approach are also discussed. This book will be of great interest to researchers and professionals whose work
