Kenneth Tan, Jack J. Dongarra, Alfons G. Hoekstra, 2003-08-01 Computational Science is the scientific discipline that

aims at the development and understanding of new computational methods and techniques to model and simulate complex systems. The area of application includes natural systems such as biology, environmental and geo sciences, physics and chemistry, and synthetic systems such as electronics and financial and economic systems. The discipline is a bridge between classical computer science, logic, complexity, architecture, algorithms, mathematics, and the use of computers in the aforementioned areas. The relevance for society stems from the numerous challenges that exist in the various science and engineering disciplines which can be tackled by advances made in this field. For instance, new models and methods to study environmental issues like the quality of air, water and soil, and weather and climate predictions through simulations, as well as the simulation supported development of cars, airplanes, and medical and transport systems, etc.

Paraphrasing R Kenway, R D Kenway, *Contemporary Physics*, 1994: There is an important message to scientists, politicians, and industrialists in the future: science, the best industrial design and manufacture, the greatest medical progress, and the most accurate environmental monitoring and forecasting will be done by countries that most rapidly exploit the full potential of computational science. Nowadays we have access to high end computer architectures and a large range of computing environments, mainly as a consequence of the enormous stimulus from the various international programs on advanced computing, e.g. *Trust, Privacy and Security in Digital Business*. Simone Fischer-Hübner, Costas Lambrinoudakis, Javier López, 2015-08-09. This book constitutes the refereed proceedings of the 12th International Conference on Trust, Privacy and Security in Digital Business, TrustBus 2015, held in Valencia, Spain, in September 2015, in conjunction with DEXA 2015. The 17 revised full papers presented were carefully reviewed and selected from 45 submissions. The papers are organized in the following topical sections: access control, trust and reputation in pervasive environments, trust and privacy issues in mobile environments, security and privacy in the cloud, security policies, usability issues, and privacy requirements and privacy audit.
