Numerical Methods of Mathematical Optimization With ALGOL and FORTRAN Programs reviews the theory and the practical application of the numerical methods of mathematical optimization An ALGOL and a FORTRAN program was developed for each one of the algorithms described in the theoretical section This should result in easy access to the application of the different optimization methods Comprised of four chapters this volume begins with a discussion on the theory of linear and nonlinear optimization with the main stress on an easily understood mathematically precise presentation In addition to the theoretical considerations several algorithms of importance to the numerical application of optimization theory are described The next chapter explains the computer programs used in actual optimization which have the form of procedures or subroutines The book concludes with an analysis of ALGOL and FORTRAN paying particular attention to their use in global optimization procedures as well as for the simplex and duoplex methods and the decomposition Gomory Beale and Wolfe algorithms This monograph will be helpful to students and practitioners of computer science and applied mathematics

Optimization Techniques with Fortran Kuester & Mize,
Fortran Optimization Michael Metcalf, 1982 FORTRAN has always been intended to be an efficient high level language and its adherence to this original design aim has helped it to achieve a dominant position in scientific engineering and other areas of computing However advice on how to obtain the best possible performance has until now been scattered through the literature in brief articles detailed reports on specific computers and very general and often superficial chapters in books on FORTRAN programming This book for the first time deals with the whole topic in a systematic fashion and every effort has been taken to include only the most up to date information and to present it in a way which clearly distinguishes between the different techniques required for the various types of compiler
Introduction to the Theory of Nonlinear Optimization Johannes Jahn, 2020-07-02 This book serves as an introductory text to optimization theory in normed spaces and covers all areas of nonlinear optimization It presents fundamentals with particular emphasis on the application to problems in the calculus of variations approximation and optimal control theory The reader is expected to have a basic knowledge of linear functional analysis
Efficient FORTRAN Programming Anton Kruger, 1990-08-14 Few books deal with the topic of programming efficiency and those that do usually gloss over it falsely leaving readers with the impression that it is not very important or not under the control of the programmer This book shows how to program for efficiency and explains that even simple alterations to existing programs can lead to dramatic reductions in execution time It further shows that optimization techniques are often hardware and compiler dependent going beyond simply mainframe
