## **HOW TO OVERCOME YOUR PRIMITIVE DNA**

In his successful effort to avoid triple by-pass open-heart surgery, an engineer uncovers answers for these critical 21st Century health questions:

- Why are foods that taste so good suddenly so bad for us?
- Why are many enzymes and hormones declining after 25 years of age?
- Why are girls becoming sexually mature as early as eight years of age?
- Why has obesity become epidemic among our younger children as well as all other age groups?
- Have the changes of the 20th century corrupted the DNA that once insured our survival for so many millennia?

It's time to make vital choices: A lifestyle that features an improved diet, efficient exercise, and meditation to handle stress, anger and guidance, can add years to your life and even more to your children's lives.

Successes attained by traditional cultures Blue Zone communities and famous athletes eating natural foods for great health extraordinary fitness and healthy longevity as guides for modern diets. The book highlights through research studies the far reaching impact of microbiome on gastrointestinal disease and gastrointestinal syndrome ulcerative colitis overweight obesity diabetics heart disease stroke physical emotional and mental wellbeing cancers as well as how prebiotic and probiotic in natural whole foods can help to reverse and prevent diseases. One key universal microbial property is that unlike the human genome the human microbiome is acquired anew each generation with vaginally born babies acquiring different microbiomes than cesarean section C section that can provide them strong immune system in life. Giampapa, 2005-09-01 DNA is life's blueprint Our genetic inheritance for health and life expectancy is encoded in each of our DNA Throughout life DNA reproduces and replaces itself continually In optimal conditions DNA copies itself over and over again making perfect reproductions This is very close to the state that people are in when they are young and healthy As people age however their DNA is damaged continually by the environment diet and physical and emotional stress The DNA begins to reproduce poorly and ultimately stops reproducing completely The result is disease and aging Contrary to current thinking new research suggests that the body is not irreversibly programmed by a finite number of cell divisions to age and die but rather is built for longevity and self repair Moreover we can regulate which aging genes to switch off and which to switch on thereby altering how our genes are expressed and influencing how we age the quality of our health and how long we live In BREAKING THE AGING CODE you will learn not only about these scientific breakthroughs but also about applying this information to your life to grow old rather than age and live life better and longer than you could have ever imagined
