Interest Rate Models - Theory and Practice Damiano Brigo,Fabio Mercurio,2007-09-26 The 2nd edition of this successful book has several new features The calibration discussion of the basic LIBOR market model has been enriched considerably with an analysis of the impact of the swaptions interpolation technique and of the exogenous instantaneous correlation on the calibration outputs A discussion of historical estimation of the instantaneous correlation matrix and of rank reduction has been added and a LIBOR model consistent swaption volatility interpolation technique has been introduced The old sections devoted to the smile issue in the LIBOR market model have been enlarged into several new chapters New sections on local volatility dynamics and on stochastic volatility models have been added with a thorough treatment of the recently developed uncertain volatility approach Examples of calibrations to real market data are now considered The fast growing interest for hybrid products has led to new chapters A special focus here is devoted to the pricing of inflation linked derivatives The three final new chapters of this second edition are devoted to credit Since Credit Derivatives are increasingly fundamental and since in the reduced form modeling framework much of the technique involved is analogous to interest rate modeling Credit Derivatives mostly Credit Default Swaps CDS CDS Options and Constant Maturity CDS are discussed building on the basic short rate models and market models introduced earlier for the default free market Counterparty risk in interest rate payoff valuation is also considered motivated by the recent Basel II framework developments **The LIBOR Market Model in Practice** Dariusz Gatarek,Przemyslaw Bachert,Robert Maksymiuk,2007-01-30 The LIBOR Market Model LMM is the first model of interest rates dynamics consistent with the market practice of pricing interest rate derivatives and therefore it is widely used by financial institution for valuation of interest rate derivatives This book provides a full

practitioner's approach to the LIBOR Market Model. It adopts the specific language of a quantitative analyst to the largest possible level and is one of the first books on the subject written entirely by quants. The book is divided into three parts: theory, calibration, and simulation. New and important issues are covered, such as various drift approximations, various parametric and nonparametric calibrations, and the uncertain volatility approach to smile modelling, a version of the HJM model based on market observables, and the duality between BGM and HJM models. Co-authored by Dariusz Gatarek, the G in the BGM model who is internationally known for his work on LIBOR market models, this book offers an essential perspective on the global benchmark for short-term interest rates.

Pricing and Advanced Lévy Models Andreas Kyprianou, Wim Schoutens, Paul Wilmott, 2006-06-14 Since around the turn of the millennium there has been a general acceptance that one of the more practical improvements one may make in the light of the shortfalls of the classical Black Scholes model is to replace the underlying source of randomness a Brownian motion by a Lévy process Working with Lévy processes allows one to capture desirable distributional characteristics in the stock returns In addition recent work on Lévy processes has led to the understanding of many probabilistic and analytical properties which make the processes attractive as mathematical tools At the same time exotic derivatives are gaining increasing importance as financial instruments and are traded nowadays in large quantities in OTC markets The current volume is a compendium of chapters each of which consists of discursive review and recent research on the topic of exotic option pricing and advanced Lévy markets written by leading scientists in this field In recent years Lévy processes have leapt to the fore as a tractable mechanism for modeling asset returns Exotic option values are especially sensitive to an accurate portrayal of these dynamics This comprehensive volume provides a valuable service for financial researchers everywhere by assembling key contributions from the world's leading researchers in the field Peter Carr Head of Quantitative Finance Bloomberg LP This book provides a front row seat to the hottest new field in modern finance options pricing in turbulent markets The old models have failed as many a professional investor can sadly attest So many of the brightest minds in mathematical finance across the globe are now in search of new more accurate models Here in one volume is a comprehensive selection of this cutting
