Orchids Of Northern Europe:

Orchids of Northern Europe Sven Nilsson, 1979 *The Orchid Book* J. Cullen, 1992-11-12 The rich and often bizarre variety of form exhibited by orchids has long provided a fascination for amateur and professional botanists alike Once seen as a hobby exclusively for the rich the cultivation of orchids is now widespread and the need for an accurate and simple guide to the identification of species in cultivation has become apparent This book aims to fulfill that need by providing botanically correct yet easily accessible information about this unique and exceptionally diverse group of plants The main part of the book is based on the text of the family Orchidaceae published in the second volume of *The European Garden Flora* with the information fully updated and displayed in a revised format Simple keys to the genera and to the species allow access to descriptions of 900 individual species which also include references to published illustrations and other useful information Numerous line drawings of diagnostic features help to make the keys and descriptions easy to understand and use A brief introduction covers the structural features of orchids important in identification and gives some information on cultivation and a list of general references *A Field Guide to the Orchids of Britain and Europe, with North Africa and Middle East* John George Williams, Andrew E. Williams, Norman Arlott, 1978 **The European Garden Flora Flowering Plants** James Cullen, Sabina Knees, H. Suzanne Cubey, J. M. H. Shaw, 2011-08-11 The *European Garden Flora* is the definitive manual for the accurate identification of cultivated ornamental flowering plants Designed to meet the highest scientific standards the vocabulary has nevertheless been kept as uncomplicated as possible so that the work is fully accessible to the informed gardener as well as to the professional botanist This new edition has been thoroughly reorganised and revised bringing it into line with modern taxonomic knowledge Although European in name the *Flora* covers plants cultivated in most areas of the United States and Canada as well as in non tropical parts of Asia and Australasia Volume 1 contains accounts of all the Monocotyledons which includes those groups known informally as the petaloid monocotyledons the Liliaceae and Amaryllidaceae in the first edition divided here among 17 families the grasses and sedges Gramineae and Cyperaceae the aroids Araceae and the large and diverse Orchidaceae The European Garden Flora Stuart Max Walters, James Cullen, 1984 Hardiness zone map for Europe included with explanation on previous page Identification manual for ornamental plants cultivated throughout the world Comprehensive keys are provided at the family genus and species levels

Native Orchids of Nova Scotia Carl Munden, 2001 This book is written primarily for the amateur enthusiast and field naturalist who would like to identify their find easily and with the least amount of detective work that is sometimes the way of more professional books written about orchids Mr Munden has kept botanical terms to a minimum and has taken pains to exclude various confusing terms including authorities for species binomials This book is for the non professional who wants to know more about the Native Orchids of Nova Scotia Handbook of North European Garden Plants James Cullen, 2001-07-19 This book provides a means for the accurate identification of over 190 families and 2220 genera of

flowering plants cultivated out of doors in gardens in north west Europe and in other geographical regions with a similar climate including parts of North America The text is an abridged version of The European Garden Flora published in six volumes and constitutes a handy single volume digest that considers families and genera but not species A key to all the families is provided and for each of the families a key to the genera within it Scientifically rigorous descriptions of families and genera follow including information on the number of constituent genera or species and details of geographical distribution Illustrations of genera from most of the major families are included to aid accurate identification *The European Garden Flora: Dicotyledons (Part I)* Stuart Max Walters, 1984 This is the third volume in a series of six and contains accounts of the first 48 families of dicotyledons including many well known trees The series is a manual for the accurate identification of cultivated ornamental plants throughout the world concentrating specifically on Europe
