Organ And Tissue Transplants:

Organ and Tissue Transplantation David Price, 2017-05-15 Organ transplantation has been one of the miracles of modern day medicine but in addition to presenting enormous technical and clinical challenges it throws up major ethical and legal issues principally from the perspective of the donor. Evolving capabilities in the spheres of both organ and tissue transplantation coupled with rapidly escalating demand assert consistent and critical pressure on our ethical and legal principles and frameworks including the expansion of the potential donor pool beyond the conventional categories of donor. This volume brings together seminal papers analyzing such matters in the context of an ever increasingly important area of clinical practice. *EBOOK: Organ and Tissue Donation: An Evidence Base for Practice* Margaret Sque, Sheila

Payne, 2007-03-16 What is the historical and social context that shapes our attitudes towards organ and tissue donation? How do the bereavement experiences of organ donor families differ from other types of bereavement? How can health and social care professionals support bereaved families leading up to, during and after organ and tissue donation? This ground breaking book is a valuable addition to the end of life palliative and bereavement care literature. Using original research findings relating to the social and psychological issues surrounding organ donation, this book provides a strong evidence base and brings together contemporary research carried out in the developed world. The book is internationally applicable especially in countries with Westernised healthcare systems and where organ donation takes place using similar practices to the UK. Key areas covered include: Examination of the historical development of human dissection and how it created a context for legislation; Analysis of how human organ and tissue donation is currently understood; The social theories that help explain the donation event and families and health professionals experiences of it. *Organ and Tissue Donation: An Evidence Base for Practice* is essential reading for transplant coordinators and qualified clinical practitioners working in intensive care, accident and emergency departments, operating theatres, palliative care units and bereavement support and counselling services. It is also a core text for specialist postgraduate programmes and a useful reference book for national organisations concerned with donation and transplant services. **Organ and Tissue Transplantation in the European Union** Yvon

Englert, 2023-10-20 These past years the media have focused public attention on malpractice in the field of organ donation with the risk of forgetting that organ donation provides an extraordinary hope of saving lives and gives a splendid example of human solidarity. Transplantation was made possible by the development of scientific and medical knowledge together with the dedication of skilled teams throughout Europe. The shortage of organs and tissue is the key factor for all the problems within the system. The size of the European Union will help to deal with this reality and requires the cooperation of medical teams, dispatching organisms and public health authorities at the European level. The transparency of a faultless organization from the technical and ethical points of view will increase the public's support of organ donation and decrease organ shortage. The development of the European Union resulting in free movement within the international market makes

harmonisation of the donation system unavoidable From the Introduction by Magda de Galan Belgian Minister of Health

Organ Transplantation United States. Task Force on Organ Transplantation,1986 **Life from Death** Phil Williams,1989 **Organ and Tissue Donation for Transplantation** Jeremy R. Chapman,Mark Deierhoi,Celia Wight,1997-06-27

Organ and Tissue Donation for Transplantation is a unique book bringing together detailed analyses of the problems surrounding organ and tissue donation The increasing number of organs that can be transplanted and the rising number of patients on waiting lists have reached the point where availability of organ donors has surpassed the immunological problems as the major challenge for transplantation In direct response to these problems this book addresses all aspects of organ and tissue donation and the methods used to increase donation Organ and Tissue Donation for Transplantation examines the many different approaches both at legislative and individual levels to improve donor rates The inclusion of a technical section considers the practical aspects of donation and testing to prevent the transmission of disease for living organ donation cadaver organ donation and tissue and bone marrow donation Legal and social aspects are considered extensively as are the various strategies used around the world to increase organ donation from the United States and Australia to Spain and the rest of Europe This book will prove to be an invaluable guide for all transplant co ordinators organ procurement agencies transplant units and intensive care units where knowledge of organ and tissue donation is required
