Organic Matter and Mineralisation: Thermal Alteration, Hydrocarbon Generation and Role in Metallogenesis

M. V. Glikson, M. Mastalerz, 2013-03-14 This book demonstrates the direct link between petroleum the derivative of organic materials and ore bodies The studies reported here highlight the common factors between hydrocarbons and mineral concentrations such as heat sources migration routes and likely traps It emphasizes the role that hydrothermal processes play in the genesis of both petroleum generation and ore grade mineralization The presence of oil residue in the form of bitumen and pyrobitumen in all sediment hosted ore bodies throughout the geological record is a testimony to their common diagenetic history Studies of active hydrothermal systems reported in this book describe the processes and derivatives in these environments linking hydrocarbon generation and mineral precipitation A comparison with residual oil in many ore bodies and mineralization occurrences in the geological record as depicted in this book can be explained in terms of processes in active hydrothermal systems One of the most interesting and challenging recent discoveries that of living nano bacteria is reported in this book The nanobes as they have recently been dubbed have been suggested as the link between the living and non living matter The resemblance of these nano organisms to fossil forms observed in a Martian meteorite have been reported recently in the media Likewise the similarity to nano bacteria in Archaean sediments is highlighted in two chapters of the book

Coalbed Methane: Scientific, Environmental and Economic Evaluation M. Mastalerz, M. V. Glikson, Suzanne D. Golding, 2013-03-09 Coalbed gas has been considered a hazard since the early 19th century when the first mine gas explosions occurred in the United States in 1810 and France in 1845 In eastern Australia methane related mine disasters occurred late in the 19th century with hundreds of lives lost in New South Wales and as recently as 1995 in Queensland s Bowen Basin Ventilation and gas drainage technologies are now in practice However coalbed methane recently is becoming more recognized as a potential source of energy rather than emitting this gas to the atmosphere during drainage of gassy mines it can be captured and utilized Both economic and environmental concerns have sparked this impetus to capture coalbed methane The number of methane utilization projects has increased in the United States in recent years as a result to a large extent of development in technology in methane recovery from coal seams Between 1994 and 1997 the number of mines in Alabama Colorado Ohio Pennsylvania Virginia and West Virginia recovering and utilizing methane increased from 10 to 17 The Environmental Protection Agency estimates that close to 49 billion cubic feet of methane was recovered in 1996 meaning that this amount was not released into the atmosphere It is estimated that in the same year total emissions of methane equaled 45.7 Bcf Other coal mines are being investigated at present many of which appear to be promising for the development of cost effective gas recovery

Mineral Deposits at the Beginning of the 21st Century A. Piestrzynski, 2022-05-02 The Joint 6th Biennial SGA SEG Meeting was held in Krakow in August 2001 This volume contains 274 extended abstracts grouped thematically under 18 session titles covering topics such as lead zinc deposits

metamorphism affecting mineral deposits and the environmental aspects of mining *Petrology* Ali Al-Juboury, 2012-01-13

Petrology New Perspectives and Applications is designed for advanced graduate courses and professionals in petrology The book includes eight chapters that are focused on the recent advances and application of modern petrologic and geochemical methods for the understanding of igneous metamorphic and even sedimentary rocks Research studies contained in this volume provide an overview of application of modern petrologic techniques to rocks of diverse origins They reflect a wide variety of settings from South America to the Far East and from Africa to Central Asia as well as ages ranging from late Precambrian to late Cenozoic with several on Mesozoic Cenozoic volcanism *Geological Survey of Canada, Current Research (Online) no. 2002-B1* , *Earliest Life on Earth: Habitats, Environments and Methods of Detection* Suzanne D. Golding, Miryam Glikson, 2010-09-02 This volume integrates the latest findings on earliest life forms identified and characterised in some of the oldest rocks on Earth New material from prominent researchers in the field is presented and evaluated in the context of previous work Emphasis is placed on the integration of analytical methods with observational techniques and experimental simulations The opening section focuses on submarine hot springs that the majority of researchers postulates served as the cradle of life on Earth In subsequent sections evidence for life in strongly metamorphosed rocks such as those in Greenland is evaluated and early ecosystems identified in the well preserved Barberton and Pilbara successions in Southern Africa and Western Australia The final section includes a number of contributions from authors with alternate perspectives on the evidence and record of early life on Earth Audience This volume will be valuable to researchers and graduate students in biogeosciences geochemistry paleontology and geology interested in the origin of life on earth *Exploration, exploitation, and utilization of coal-measure gas into the future: Volume II* Mingjun Zou, Chongtao Wei, Reza Rezaee, Junjian Zhang, Zhenzhi Wang, 2023-06-05 **Geological Survey of Canada, Current Research (Online) no. 2003-B4** , **Encyclopedia of Geology** , 2020-12-16 Encyclopedia of Geology Second Edition presents in six volumes state of the art reviews on the various aspects of geologic research all of which have moved on considerably since the writing of the first edition New areas of discussion include extinctions origins of life plate tectonics and its influence on faunal provinces new types of mineral and hydrocarbon deposits new methods of dating rocks and geological processes Users will find this to be a fundamental resource for teachers and students of geology as well as researchers and non geology professionals seeking up to date reviews of geologic research Provides a comprehensive and accessible one stop shop for information on the subject of geology explaining methodologies and technical jargon used in the field Highlights connections between geology and other physical and biological sciences tackling research problems that span multiple fields Fills a critical gap of information in a field that has seen significant progress in past years Presents an ideal reference for a wide range of scientists in earth and environmental areas of study *Economic Geology* , 2001

Origin, Distribution and Alteration of Organic Matter and Generation and Migration of Hydrocarbons in Austin Chalk, Upper Cretaceous, Southeastern Texas GEORGE JOSEPH GRABOWSKI (JR.), 1981 The Austin Chalk is an impure onshore chalk that was deposited on a ramp marginal to the Gulf of Mexico during the Late Cretaceous Basinal chalks are organic rich commonly containing 0.5–5.0% amorphous sapropelic kerogen derived from marine organic matter with only trace amounts of terrestrial kerogen Less organic matter was deposited and preserved in oxygenated shallow water and fresh water diagenesis oxidized the organic matter on outcrop In each sample the kerogen is concentrated in microstylolites with organic fluids segregated in micropores in the chalk The bitumen from the Austin Chalk contains geochemical fossils characteristic of plankton and algae steranes triterpanes isoprenoids particularly pristane and phytane and even carbon numbered C₁₅–C₂₂ n alkanes These geochemical fossils become less abundant with increasing burial depth due to the generation of hydrocarbons during catagenesis The kerogen darkens and becomes condensed and aromatic as the H/C atomic ratio decreases and hydrocarbons are liberated from the kerogen and from asphaltenes Saturated hydrocarbons particularly C₁₂–C₂₆ n alkanes and isoalkanes and single ring cycloalkanes increase more rapidly than aromatic hydrocarbons and resins Kerogen alteration and hydrocarbon generation are unaffected by the mineral composition of the chalk suggesting that the dominant controls on the rate of alteration and the composition of hydrocarbons generated are the type of organic matter and thermal history of the rocks The principal zone of oil generation for the Austin Chalk occurs at the same depth as for shales of the same age The Austin Chalk reservoirs petroleum sourced within the formation and petroleum that has migrated into the chalk from elsewhere in the chalk and the underlying Eagleford Formation The hydrocarbons are reservoirized in interparticulate pores and micro and macrofractures Migration results in an enrichment in saturated hydrocarbons and to a lesser
