Gagarella, K. D. Rainsford, Gyula Mózsik, 2012-12-06 The Gastrointestinal Section of the International Union of Pharmacology IUPHAR was established in 1994 in Montreal Canada The establishment of the GI Section recognizes the international progress of gastrointestinal pharmacology including basic and human studies The Gastrointestinal Section of IUPHAR organized the first symposium Biochemical Pharmacology as an Approach to Gastrointestinal Diseases from Basic Science to Clinical Perspectives on 10-12 October 1995 in Pécs Hungary The main topics were Gastrointestinal secretory and excretory functions Gastrointestinal motility Biochemical pharmacological mechanisms in neural and hormonal actions involved in GI functions Main normal and pathological biochemical mechanisms in GI functions GI mucosal injury and protection Molecular mechanisms of premalignant and malignant diseases in GI tract Use of isolated cells and cell cultures in biochemical pharmacological studies to approach GI diseases The presented papers are published in this book Gastrointestinal Pharmacology Beverley Greenwood-Van Meerveld, 2017-04-19 This volume aims to connect current ideas and concepts about GI disorders with the search for novel therapeutics Towards this goal authors provide a timely state of the art overview of the GI tract in health and disease current treatment approaches and ongoing developments in drug discovery and their potential for the better treatment of patients with GI disorders Herbal Medicines for Gastrointestinal and Hepatic Diseases - Novel Pharmacological and Toxicological approaches, Volume I, 2nd edition Muhammad Hasnat, Mirza Muhammad Faran Ashraf Baig, Mohammad Saleem, Aftab Ullah, Muhammad Faisal Nadeem, Alessandra Durazzo, Massimo Lucarini, 2023-07-21 This Research Topic is part of a series with Herbal Medicines for Gastrointestinal and Hepatic Diseases Novel Pharmacological and Toxicological approaches Volume II Ethnopharmacology deals with the exchange of knowledge about people's use of herbal medicines and their pharmacological effects The information related to therapeutic agents of plant origin and their toxic effects was preserved by oral tradition as well as recorded in materia medica Many drugs that are now available on the market have been developed from this valuable information Today scientists that specialize in medicinal chemistry use these existing herbal drugs to develop and produce more therapeutically active agents with less toxic side effects The gastrointestinal tract GIT is a multi organ system consisting of bacteria and digestive enzymes that have the capacity of degrading food and other molecules Diseases associated with this organ system include peptic ulcer inflammatory bowel disease gastric cancer to name a few The liver receives seventy percent of its blood supply from the GIT via the hepatic portal vein The disruption in the gut liver axis

is associated with liver diseases including alcohol associated liver disease ALD non alcoholic fatty liver disease NAFLD and autoimmune liver disease AILD NAFLD can cause non alcoholic steatohepatitis which can develop into liver cirrhosis through inflammation and fibrosis Liver cirrhosis is categorized as an end stage of chronic liver disease which impairs innate immunity related genes Growing evidence from preclinical studies proposes that the gut liver axis leads to targeted therapeutic modalities for various liver injuries Therefore therapeutic treatment of these conditions is essential to prevent progression to these more harmful late stage diseases Pharmacological Approaches Targeting Neutrophilic Inflammation:

Yagiela, Frank J. Dowd, Bart Johnson, Angelo Mariotti, Enid A. Neidle, 2010-03-12 Use your knowledge of pharmacology to enhance oral care *Pharmacology and Therapeutics for Dentistry* 6th Edition describes how to

evaluate a patient's health and optimize dental treatment by factoring in the drugs they take. It explores the basic fundamentals of pharmacology, special topics such as pain control, fear and anxiety, and oral complications of cancer therapy, and most importantly, the actions of specific drug groups on the human body. Whether you're concerned about the drugs a patient is already taking or the drugs you prescribe for treatment, this book helps you reduce risk and provide effective dental care. An emphasis on the dental applications of pharmacology relates drugs to dental considerations in clinical practice. Dental aspects of many drug classes are expanded to include antibiotics, analgesics, and anesthetics. The Alternative Medicine in Dentistry chapter discusses chemicals used as alternative medicines and assesses their potential benefits and risks. The Nonopioid Analgesics chapter groups together non-opioid analgesics, nonsteroidal anti-inflammatory drugs, and antirheumatic and anti-gout drugs, making these easier to locate and study. Coverage of the endocrine system includes four separate chapters for the most comprehensive coverage. Drug Interactions in Clinical Dentistry appendix lists potential interactions between drugs a patient is taking for nondental conditions and drugs that may be used or prescribed during dental treatment, including effects and recommendations. Glossary of Abbreviations appendix includes the most common abbreviations used for drugs or conditions. New Pharmacogenetics and Pharmacogenomics chapter covers the effects of genetic traits of patients on their responses to drugs. A NEW introductory section offers tips for the study of dental pharmacology and relates pharmacology to dental considerations. An updated discussion of drug-drug interactions covers the harmful effects of mixing medications. Coverage of adverse effects and mechanisms of COX-2 inhibitors, antibiotic prophylaxis, and antiplaque agents explains the dental risks relating to common drug treatments.

Molecular pharmacological approaches against lung diseases: targeted drug discovery Poonam Arora, Lalit Mohan Nainwal, Seyyed Shamsadin Athari, 2024-07-12. Molecular Pharmacological approaches against lung diseases: targeted drug discovery. The global burden of lung diseases is rising continuously and is a constant concern. Lung diseases of concern including asthma, infection, pneumonia, lung cancer, abnormal build-up of fluid, swelling, and inflammation, both neoplastic and non-neoplastic diseases are listed as the third leading cause of death by the World Health Organization. The most common disease in the lungs includes asthma, cystic fibrosis, chronic obstructive pulmonary disease, etc. The respiratory issues listed here, among others, are exacerbated by environmental toxicants which directly come in contact with the lung architecture, thereby causing lung pathologies resulting in the exacerbated immune response in affected patients. Biologically active molecules, including small or large molecular weight compounds from natural or synthetic sources, exhibit prominent pharmacological properties that impact health by modulating disease pathophysiology and influence the ligand-receptor interactions depending upon the pathway and their bioavailability.
