Protein Biosynthesis in Nonbacterial Systems Jerold A. Last, Allen I. Laskin, 1972 Molecular Mechanisms of Protein Biosynthesis Herbert Weissbach, 2012-12-02 Molecular Mechanisms of Protein Biosynthesis is a collection of papers dealing with cell free systems at the molecular level including transfer RNA the initiation elongation and termination processes ribosome structure and function mRNA translation and DNA directed in vitro protein synthesis A couple of papers review tRNA aminoacyl tRNA synthetases and aspects of ribosome structure One paper discusses affinity labeling in the study of binding and catalytic sites of large complex and heterogeneous systems such as the ribosome The investigator should be aware of the chemically reactive or photoactivatable analogue reacting specifically with one or more ribosomal components This reaction should be determined if it is dependent on the correct binding of the affinity label at the functional site Another paper describes the series of reactions in protein synthesis as the process by which the ribosome moves relative to the messenger RNA Other papers discuss messenger RNA and its translation DNA dependent cell free protein synthesis as well as the genetics of the translational apparatus The collection will benefit microbiologists biotechnologists and academicians connected with the biological sciences

Schweiger, M. Sela, L. Syru?ek, P. K. Vogt, 2012-12-06 Expression of an immune response is the net result of complex synergistic and antagonistic activities performed by a variety of cell types It includes macrophages T and B populations which may interact in performance of a response and suppressor cells interfering with it Accordingly a lack of response may not necessarily indicate absence of immunocompetent cells but rather nonexpression of competence Thus one should consider two possible situations which are by no means mutually exclusive to account for immunologic unresponsiveness a one or more of the cell populations composing the synergistic unit is absent or immature and b an antagonistic unit which interferes with the response is dominating In view of this an approach to development of immune reactivity necessitates parallel surveys of development of cells with the potential to perform as well as of cells which can suppress the response Classification of the various cell types has been based so far on their phenotypic properties e g membrane antigen markers cell receptors production and secretion of immunoglobulins etc Genotypically T and B cells may represent either separate independent cell lines or different stages of development within the same cell lineage *Modified Nucleosides and Cancer* G.
