cuatro patas más antiguos los primeros fósiles se remontan a unos 330-360 Ma. Así, los anfibios necesitan un medio acuático en el que desarrollarse en las primeras fases de su vida. La clase Amphibia comprende algo más de 7400 especies distintas de las que 5000 corresponden a especies de ranas y sapos anuros. Esta nueva obra dedicada íntegramente a los anfibios forma parte de la colección Cómo se comunican los seres vivos y curiosidades referido a los animales vertebrados e invertebrados. En cada uno de los tres volúmenes de anfibios se explican las características biológicas más destacables: anatomía, hábitos y costumbres, alimentación, reproducción, formas de comunicarse y, en particular, curiosidades de más de setenta especies distintas. La obra contiene cerca de setecientas fotografías de muchas especies de anfibios. Siguiendo el mismo criterio de las obras anteriores de la colección se acompaña en la mayoría de las especies fotografías de sellos de correos con representación de algunos anfibios. Los sellos de correos han sido una forma de comunicación visual y existen cientos de ellos dedicados a los anfibios y al resto de los animales. Al igual que el resto de los libros que conformarán la enciclopedia, esta nueva obra pretende exclusivamente ser divulgativa, pensada para cualquier tipo de público y, en particular, para todo aquel que tenga interés en conocer un poco sobre la vida y curiosidades de estos animales acuáticos, a veces saltarines y la mayoría con llamativos colores. Se ha efectuado un extenso trabajo de selección y búsqueda en distintos textos y páginas web para, de un modo fácil y resumido, poder ofrecer una información general de los anfibios. Gracias nuevamente a los miles de científicos y expertos en publicar sus investigaciones y experiencias con ello se ha conseguido tener acceso a la información. La parte técnica de la obra en su totalidad ha sido revisada por Javier Palomo Muñoz, doctor en Ciencias Biológicas del departamento de Biología Animal de la Universidad de Málaga, y por David Romero Pacheco, doctor en Biología Animal de la misma universidad.

Amphibians of Ecuador Luis A. Coloma, William E. Duellman, 2025-04-07. This book is the second of four volumes which are comprehensive, well illustrated, and authoritative works invaluable to biologists, conservationists, and others. It explores in comprehensive detail the rich amphibian diversity of Ecuador, providing a thorough review of biogeography, amphibian declines, and conservation. This volume covers Pipidae, Telmatobiidae, Microhylidae, Dendrobatidae, Ranidae, Bufonidae, and Hylidae. Characteristics of each species are listed, defined, and compared to similar other species. Reproductive behavior, where known, is described, as are data on vocalizations, larvae, and ontogenetic changes. Amphibian distributions are illustrated with physiographic maps with dots. Each volume addresses the declines, extinctions, and conservation status of each species and provides notations of their occurrence in reserves. **KEY FEATURES:** Provides detailed and authoritative accounts for each species in seven families: Pipidae, Telmatobiidae, Microhylidae, Dendrobatidae, Ranidae, Bufonidae, and Hylidae. New data are incorporated for many species. Describes, with full color maps, the distribution of all known taxa. Includes information on the ecology, reproduction, and behavior of all taxa. [Fortschritte der Chemie organischer Naturstoffe / Progress in the Chemistry of Organic Natural Products](#), 2012-12-06. The chemistry of condensed tannins has hitherto represented a relatively unattractive and therefore neglected area of study, one in which the weight of research

effort involved is invariably disproportionate to the results achieved in which the participating schools generally confine their approach to specific molecular species and in which as yet no consensus has been reached regarding likely precursors The problems which beset those engaged in this field represent a combined function of the abnormal complexity of the gradational range of oligomers of increasing mass and affinity for substrates which typify most extracts rich in tannins and the consequent problem of their isolation and purification the high chirality of tannin oligomers the need to contend with the phenomenon of dynamic rotational isomerism about interflavanoid bonds in the ^1H n m r spectral interpretation of their derivatives the lack of precise knowledge regarding the points of bonding at nucleophilic centres and the obvious limitations of a hitherto predominantly analytical approach The last of these reflects the need for a general method of synthesis which permits unambiguous proof of both structure and absolute configuration also at higher oligomeric levels With these objectives in mind we initiated a purely synthetic approach based on the premise that flavan 3 4 diols as source of electrophilic flavanyl 4 carbocations and flavan 3 OIs as nucleophiles of 1 2 represent the prime initiators of a process of repetitive condensation in which the immediate products also represent the sequent nucleophilic substrates
