Rape Seed:

Canola and Rapeseed Usha Thiyam-Holländer, N.A. Michael Eskin, Bertrand Matthäus, 2012-11-21 In 2010 esteemed researchers gathered at a workshop held at the Richardson Centre for Functional Foods and Nutraceuticals at the University of Manitoba in Winnipeg Canada Drawn from these proceedings Canola and Rapeseed Production Processing Food Quality and Nutrition presents state of the art information on the chemistry of the minor constituents of canola and rapeseed and their impact on human health The book also identifies new areas of research and opportunities for the industrial application of functional foods and nutraceuticals from canola and rapeseed Topics include The historical development properties and performance of canola Characteristics and bioactives of sinapic acid derivatives and the decarboxylation pathways leading to their formation Canola protein processing High omega 9 canola oils and their future applications Modification of Brassica oilseeds Rapid analytical methods for measuring oil content The potential of ultrasound and supercritical fluid extraction for producing value added by products The processing of virgin rapeseed oils in Europe Extraction and application of canola protein The frying stability of high oleic low linolenic acid canola oils The potential of mustard oil for biodiesel The final chapters demonstrate the health benefits of canola including antioxidant antimutagenic and anticancer properties Authored by experienced researchers in the field the book chapters have been expanded considerably to include a number of areas not contained in the original workshop providing comprehensive coverage of the potential of this essential crop **Rapeseed as an Industrial Crop, January 1979-November 1988** Jerry Rafats, 1989 **Canola and Rapeseed** Fereidoon Shahidi, 2012-12-06 Canola is one of the most important oilseed crops of the world as its production over the last 10 years has grown much faster than any other source of edible vegetable oil The short history of the food use of canola oil in Western countries has been marked by its GRAS generally recognized as safe accreditation by the USFDA United States Food and Drug Administration in 1985 Canola Oil is perhaps the only edible vegetable oil that by today's standards is considered to be nutritionally well balanced Furthermore its protein meal is well balanced in its amino acid content and perhaps in the not too distant future may commercially be upgraded for human consumption The present monograph reports the latest advancements in the production chemistry analyses nutritional properties and commercial processing of canola and rapeseed Recent developments in the biotechnology of canola production and genetic alterations and improvements of seeds new methods of analyses and recent studies to upgrade the canola proteins are presented in 19 chapters Extensive bibliographies provide the reader with an in depth and thorough review resource in related areas The monograph will be of interest to advanced undergraduate and graduate students as well as researchers in universities industries and government laboratories Food scientists crop and agricultural engineers chemists and biochemists nutritionists and technologists as well as plant breeders will find it a valuable resource base in the latest trends and developments in canola research **High and Low Erucic Acid in Rapeseed Oils** John K G Kramer, 2012-12-02 High and Low Erucic Acid Rapeseed Oils Production

Usage Chemistry and Toxicological Evaluation covers a wide range of subjects related to rapeseed that is from plant breeding industrial processing to nutrition and biochemistry Composed of 22 chapters this book first discusses the origin and properties of Brassica oilseed crops Subsequent chapters describe the world production and trade of rapeseed and its products as well as the history and marketing of rapeseed oil in Canada Other chapters elucidate the chemical composition of rapeseed oil the introduction and consumption of low erucic acid rapeseed varieties in Canada and the development of improved rapeseed cultivars Results obtained with consumption of high and low erucic acid rapeseed oils to experimental animals are also shown This work will be helpful as an introductory material to those who are not familiar with the production use and properties of rapeseed oil **Bibliography of Agriculture with Subject Index** ,1983-10

Rapeseed and Canola Oil Frank Gunstone,2009-02-12 Rapeseed is now the second largest oilseed crop after soybean and the third largest vegetable oil after soybean oil and palm oil and it is therefore an important contributor to the annual supply of vegetable oils required to meet an increasing demand This volume provides comprehensive coverage of rapeseed oil and its close relative canola oil from production agronomic aspects through extraction to refining and processing Chemical composition physico chemical properties food and non food uses are considered in detail and a chapter is included on future prospects including oils available by means of genetic manipulation This is a book for oils and fats chemists and technologists in the food and oleochemical industries chemical engineers in the processing industry nutritionists and seed technologists Potential New Crop, Rapeseed, 1970-85 Jerry Rafats,1986 *Pesticide residues in food 2019 - Joint FAO/WHO Meeting on Pesticide Residues. impact of plant genetic modification on the nutritional quality of their seeds for human and animal feeding As an example already a number of legume species and rapeseed have been modified to improve the sulphur amino acid content of their seed and thus their protein quality Besides the major grain legume species and rapeseed that had been discussed at previous meetings in this series number of crop products as potential protein sources for animal feeding were considered for the first time These included cottonseed meal linseed meal and sunflower seed meal The potential of some new exotic crops from Mexico was also covered including Mexican species of the genus *Lupinus* and a Mexican plant from the same family as castor bean which has a very high oil content but is usually toxic Work from Cuba compared the nutritional characteristics of soybean with a range of tropical grain legume species which have received little previous attention A major change at this meeting was the greater consideration of the effects both positive and negative of the consumption of these seeds for human nutrition A major review on the development of allergenicity to legume seed in humans is included There was also consideration of the potential role of antinutritional factors in reducing the growth of various types of tumour cells The presented papers also suggest that the consumption of legume seed in the diet can potentially reduce serum cholesterol levels Overall from the 5 conference sessions there are 52 papers Of these 7 are major invited reviews on the current state of research in this important area for human and animal feeding
