## **Rapid Manufacturing An Industrial Revolution For The Digital Age:**

**Rapid Manufacturing** Neil Hopkinson, Richard Hague, Philip Dickens, 2006-02-22 Rapid Manufacturing is a new area of manufacturing developed from a family of technologies known as Rapid Prototyping. These processes have already had the effect of both improving products and reducing their development time; this in turn resulted in the development of the technology of Rapid Tooling which implemented Rapid Prototyping techniques to improve its own processes. Rapid Manufacturing has developed as the next stage in which the need for tooling is eliminated. It has been shown that it is economically feasible to use existing commercial Rapid Prototyping systems to manufacture series parts in quantities of up to 20 000 and customised parts in quantities of hundreds of thousands. This form of manufacturing can be incredibly cost effective and the process is far more flexible than conventional manufacturing. Rapid Manufacturing: An Industrial Revolution for the Digital Age addresses the academic fundamentals of Rapid Manufacturing as well as focussing on case studies and applications across a wide range of industry sectors. As a technology that allows manufacturers to create products without tools, it enables previously impossible geometries to be made. This book is abundant with images depicting the fantastic array of products that are now being commercially manufactured using these technologies. Includes contributions from leading researchers working at the forefront of industry. Features detailed illustrations throughout. Rapid Manufacturing: An Industrial Revolution for the Digital Age is a groundbreaking text that provides excellent coverage of this fast emerging industry. It will interest manufacturing industry practitioners in research and development, product design and materials science as well as having a theoretical appeal to researchers and post graduate students in manufacturing engineering, product design, CAD, CAM and CIM.

**Algorithm-Driven Truss Topology Optimization for Additive Manufacturing** Christian Reintjes, 2022-02-01. Since Additive Manufacturing (AM) techniques allow the manufacture of complex shaped structures, the combination of lightweight construction topology optimization and AM is of significant interest. Besides the established continuum topology optimization methods, less attention is paid to algorithm driven optimization based on linear optimization, which can also be used for topology optimization of truss like structures. To overcome this shortcoming, we combined linear optimization, Computer Aided Design (CAD), numerical shape optimization and numerical simulation into an algorithm driven product design process for additively manufactured truss like structures. With our Ansys SpaceClaim add-in for Constructw@re, which is capable of obtaining ready for machine interpretation CAD data of truss like structures out of raw mathematical optimization data, the high performance of heuristic based optimization algorithms implemented in linear programming software is now available to the CAD community.

**Design for Personalisation** Iryna Kuksa, Tom Fisher, 2017-05-18. The principle of personalisation appears in a range of current debates among design professionals, healthcare providers and educationalists about the implications of new technologies and approaches to consumer sovereignty for mass provision. The potential of new technologies implies systems of provision that offer bespoke support to their users, tailoring services and experiences to suit individual needs. The assumption that individual choice automatically increases wellbeing has underlain the re-design of public services. Ubiquitous personalisation in screen based environments gives individuals the sense that their personality is reflected back at them. Advances in Artificial Intelligence mean our personal intelligent agents have begun to acquire personality. Given its prevalence, it is appropriate to identify the scope of this phenomenon that is altering our relationship to the non-human world. This book presents taxonomy of personalisation and its potential consequences for the design profession as well as its ethical and political dimensions through a collection of essays from a range of academic perspectives. The thought provoking introduction, conclusion and nine chapters present a well balanced mixture of in-depth literature review and practical

examples to deepen our understanding of the consequences of personalisation for our professional and personal lives Collectively this book points towards the implications of personalisation for design led social innovation This will be valuable reading for professionals in the design industry and health provision as well as students of product design fashion and sociology
